RESPONSE TO COMMENTS SPRINGSIDE ROAD, WALMERSLEY

Many thanks for your comments dated 24th April 2025 (CL1005.240425.CL1) in relation to planning application reference: 68055, discharge reference: 71697.

We have provided a response to your comments in the order in which they were raised.

In order for this Section to be satisfied that this development does not pose a risk to human health or the environment, the following information needs to be submitted to the Council for approval:

(i) Additional Enabling and Earthworks Remediation Phase Validation Information to include:

An updated version of the MMP which includes details of the source(s) of imported topsoil.

The MMP was prepared for re-use at the site of origin and also allowed for potential future import of topsoil via the direct transfer of clean naturally occurring material. Topsoil has not been imported by direct transfer. Instead, it was purchased from Cheshire Soils and Aggregates and has therefore not been included in the MMP. The material was tested at the required frequency by volume in accordance with the remediation strategy, with results (Chemtest 24-34373) presented in the validation report (ref: 13-895-R6-1, January 2025).

An updated version of the Verification Report which includes full copies of the figures and drawings in Appendix III.

E3P has checked the Appendices and all drawings listed on Page 2 of the report (following directly after the table of contents) have been included in Appendix III. The numbers are not in sequence because they follow our internal numbering system. As such, where the numbering skips from -007 to -011, for example, this does not necessarily mean drawings are missing. For clarity, no drawings are missing from the report.

Details of where the potentially contaminated made ground excavated and removed from TP105/tennis court area was placed on-site.

The potentially contaminated Made Ground excavated from TP105 and the wider tennis court area has been removed from site along with other surplus materials.

Waste transfer notes documenting removal of soils from the site are included as an attachment to this letter. Tickets show 52 loads (c. 450 m³) were removed from site on in April 2025 and a further 96 loads (c. 850 m³) were removed from site in May 2025 by Ruttle Plant and taken to Booths Quarry, Harwood. Two loads of hardcore were also removed from site and taken to RPTS.

It should be noted that some Made Ground material located within tree protection areas and gardens are yet to be stripped. It is understood that this material will also be removed from site in due course, and corresponding waste transfer tickets will be provided by Morris Homes upon completion of the works. This applies to plots 20-24 and 26-28.

Waste transfer documentation for the off-site disposal of the tarmac in the tennis court area/hardstanding was excavated.

Waste transfer notes have been included as an attachment to this letter.

Details of where the unsuitable topsoil excavated from the area around WS104 was disposed of – was it re-used at depth on site or disposed of off-site? If the material was removed from site waste transfer notes will be required.

The unsuitable topsoil excavated from the area around WS104 was removed from site. Waste transfer notes documenting the off-site disposal of this material have been included as an attachment to this letter.

Sample references for the natural subsoil tested as part of the original site investigation and reported upon in certificates of analysis - I2 Analytical, Reference: 21-58346, 1 March 2021 and I2 Analytical, Reference: 21-58675, 3 March 2021.

Subsoil results are included in I2 Analytical Report Reference: 21-58346 only. Please find attached to this letter for ease of reference. Sample references include: WS104 (1.00 m), TP104 (0.40 m), TP109 (0.40 m). There is a typo in the validation report that states four samples were tested, however, it was only three as referenced above.

(ii) Build Phase Verification to validate that the work undertaken conforms to the remediation proposals received and agreed by this Section to include:

The topsoil depth proposed in the Remediation Strategy and Landscaping Plan for garden and soft landscaped areas do not match. Please confirm that the agreed Landscape Plan (Reference: M3492-PA-01-V10, July 2023) will be adhered to, or alternatively a revised Landscape Plan should be produced to match the Remediation Strategy.

E3P have reviewed the landscape plan and note that there appears to be a conflict with regards the topsoil thickness. In the Key, under 'Garden Surface' it states Lawn Topsoil – 350 mm minimum depth, however, in the planting notes under 'Topsoil' it states the depth of topsoil for planting beds to be 350 mm, and for turf 150 mm minimum.

The E3P remediation strategy requires 150 mm topsoil overlying natural subsoils in private gardens and public open space and soft landscaping, where natural subsoil is exposed (to provide a growing medium, rather than a remedial cover system). This is in reference to turf. For all other ornamental planting/trees, E3P agree the landscape plan should be adhered to, although this should not impact the sign off of the validation report due to there being no unacceptable contamination risk to end users.

Validation information and sampling for imported topsoil/subsoil to be used in garden and soft landscaped areas. Details of the source of soil used in each plot and a photographic record of the soils being placed is required.

Topsoil was imported from Cheshire Soils in October 2024. Chemical analysis Report Ref: 24-07602 was provided by the supplier and reviewed prior to import and deemed the material suitable for use.

Following the import of approximately 85 m³ of topsoil, E3P attended site on 22nd October 2024 and collected three samples from the stockpiled material, in accordance with the sampling frequency set out in the approved Remediation Strategy.

Chemical analysis was conducted by Eurofins Chemtest using UKAS-accredited methods, where applicable. The suite of testing included: heavy metals, sulphates, phenols, speciated PAHs, speciated and total TPH, and asbestos. The results, presented in Report Ref: 24-34373, confirm the material is chemically suitable for use as topsoil in residential gardens.

The validated topsoil has since been placed within the gardens of Plots 1–4. Photographic evidence of the placed topsoil is provided in Plates 1.1 and 1.2. All other gardens (to date and upcoming) will be completed with site-won topsoil which has been tested and confirmed to be suitable for use as discussed in the validation report (ref: 13-895-R6-1, January 2025).

Plate 1.1 Imported Topsoil – Plot 4

Plate 1.2 Imported Topsoil – Plot 4

I trust the information provided in this letter report is satisfactory, however if there is anything further please do not hesitate to contact me.

Yours sincerely,
For and on behalf of E3P Ltd

Jessica Sheridan
Senior Geoenvironmental Consultant

* These descriptions are only intended to act as a cross check if sample identities are questioned. The major constituent of the sample is intended to act with respect to MCERTS validation. The laboratory is accredited for sand, clay and loam (MCERTS) soil types. Data for unaccredited types of solid should be interpreted with care.

Stone content of a sample is calculated as the % weight of the stones not passing a 10 mm sieve. Results are not corrected for stone content.

For method numbers ending in 'UK' analysis have been carried out in our laboratory in the United Kingdom.

For method numbers ending in 'PL' analysis have been carried out in our laboratory in Poland.

Soil analytical results are expressed on a dry weight basis. Where analysis is carried out on as-received the results obtained are multiplied by a moisture correction factor that is determined gravimetrically using the moisture content which is carried out at a maximum of 30oC.

This report shall not be reproduced except in full, and only with the prior approval of the laboratory.

Any comments or interpretations are outside the scope of UKAS accreditation.

The Laboratory is not accredited for any sampling activities and reported results relate to the samples 'as received' at the laboratory.

Uncertainty of measurement for the determinands tested are available upon request .

None of the results in this report have been recovery corrected.

All results are expressed on a dry weight basis.

The following tests were analysed on samples 'as received' and the results subsequently corrected to a dry weight basis EPH, VPH, TPH, BTEX, VOCs, SVOCs, PCBs, Phenols.

For all other tests the samples were dried at $\leq 30^{\circ}\text{C}$ prior to analysis.

All Asbestos testing is performed at the indicated laboratory .

Issue numbers are sequential starting with 1 all subsequent reports are incremented by 1.

Sample Deviation Codes
