

## **784-B038963: EAST LANCASHIRE PAPER MILL, RADCLIFFE, AIR QUALITY STATEMENT OF CONFORMITY**

This statement of conformity has been prepared to summarize potential changes with regard to air quality, as a result of the alterations between the consented Outline Application (ref: 62969) and the Reserved Matters Application.

An Air Quality Assessment (ref: A090070-193, dated: June 2018) was produced in support of the approved Outline Application which determined the predicted impacts associated with the scheme and the modelled concentrations of air pollutants at proposed sensitive receptors within the proposals. The 2018 Air Quality Assessment results showed that, with respect to Nitrogen Dioxide (NO<sub>2</sub>) and Particulate Matter (PM<sub>10</sub> & PM<sub>2.5</sub>), a negligible impact will be experienced at all identified sensitive receptors as a result of the scheme, and concentrations of air pollutants on site will be significantly below the relevant Air Quality Objectives.

It is understood that there are no material alterations to the masterplan since the Outline Application, other than minor amendments to the layout and the roads within the scheme. The number of units proposed remains the same as the approved Outline Application, and therefore, it is expected that the vehicle movements associated with the proposed development will remain unchanged.

As such, there will be no material change to the conclusions presented within the Air Quality Assessment (dated June 2018). Regarding the effects of changes in traffic flow as a result of the proposed development, with respect to NO<sub>2</sub>, PM<sub>10</sub> and PM<sub>2.5</sub> exposures, significance is determined to be 'negligible' at all identified receptor locations, and concentrations on-site are predicted to be below the relevant Air Quality Objectives. As such, no additional mitigation is required.
