Bio secure area plan

On termination the following plan is followed

All equipment is lifted or removed depending on type

The walls etc are blown to remove dust

All manure is removed off the walls etc

Water drinking systems are drained and disinfectant added to remove any contamination and the lines are then flushed with clean water

A cleaning programme is then followed for the building and equipment

Ending with a full disinfection of the houses and surrounding concrete areas

Before entering the bio secure areas on map foot dips and hand sanitisers must be used. Work specific clothing must also be worn. Any equipment being taken in to the bio secure areas should be clean. All areas outside the poultry houses should be clean and any vehicles entering the semi bio secure areas should be clean and disinfected with the available sprayer.

Overshoes, house specific wellies and hand sanitisers must be use in each house.

Each house has a barrier system in place where wellies can be changed and overboots put on the hand sanitisers must be used on entering and leaving to prevent cross contamination .

These conditions must be met to ensure bio security and prevent cross contamination from visiting personnel and vehicles and between houses on the farm.

AREAS MARKED
IN PINK BORDERS
ARE BIO SECURE

AREAS MARKED
BY GREEN
BORDERS ARE
SEMI BIO SECURE
AND SHOULD BE
KEPT CLEAN AND
HAZARD FREE
INCLUDING SILOS
AND BOILER
HOUSES.

□ FOOT DIP

10 20 30 m.
