The manure is removed off site as soon as the cabins are empty.
The foot dips are emptied onto the manure after the chickens are removed.
Ash from the biomass boilers is also mixed in with the manure once the chickens are removed.

The manure is taken away and spread on the land by Mr Bill Greenwood and Mr Steven Robinson.

Manure contingency plan for sillinghurst farm

The manure is taken off site but in the unlikely event that our usual farmers would be unable to remove it we have other farmers on a waiting list.

In the event none of the farmers are available the manure will be removed and taken to the above farmers by ourselves by means of tractor and trailer.

There is no reason the manure would be kept on the poultry farm longer than 24 hours after poultry depletion.

7th March 2009.
