SPRING VIEW HOUSE, CARR FOLD LANE,
OFF CARR STREET, RAMSBOTTOM, BL0 9DT
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination, landfill gas and geotechnical issues.

SITE DESCRIPTION

The site is an almost triangular plot, about 30 by 30 metres, located to the north of Carr Street in Ramsbottom and at OS Grid Reference 378829, 417063. The site, inspected on 14/10/21 by Mr M Whitaker (Geotechnician), comprises a largely vacant plot with a garage (suspected asbestos cement roof) and shed towards the southwest, and a garage towards the north. An access track (Carr Fold) runs along the northwest boundary leading down to the garage from Carr Street. The site is very overgrown and underlain with building materials, covered by undergrowth, at the surface.

The site slopes down to the northeast.

There are houses to the east, south and west, and vacant land to the northwest. The area slopes down to the east.

TREES

There are numerous bushes around the site and along the northwest and southwest boundaries, where the trees are up to about 20m high.

This is not an accurate arboricultural survey.

PROPOSED DEVELOPMENT

It is proposed to build a detached house with basement, towards the centre of the site, with associated gardens, and parking at the southwest.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural and Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These general comments do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 7/10/21
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 14/10/21

This report is referred to as a Preliminary Risk Assessment (PRA) alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Pollution incidents
- Water abstraction points or Source protection zones
- Landfill sites
- Hazardous substances sites
- Fuel stations
- Sensitive land uses (other than adopted green belt)

Geology of Site

The geological map indicates that the underlying solid rocks are mudstone of the Rossendale Formation to the west and of the Marsden Formation to the east.

Surface drift is shown as glacial till (boulder clay), natural subsidence hazards are shown as low to no hazard.

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Surface Water (Hydrology)

The nearest surface water feature is a reservoir 18m east, the nearest water course being a culvert 50m southeast.

The nearest discharge consents are:

- 29m south – Public sewage: storm sewage overflow to River Irwell in 2016 *
- 241m northwest – Sewage discharges: final/treated effluent (not water company) to Trib of Irwell in 1970 *

The area slopes down to the east and the flow of surface water is expected to be in this direction.

* not relevant due to distance/severity/significance

Flooding

Information from the EA flood maps suggests areas where rivers would flood. There are two zones:

- 'normal' flooding, based on a 1 in 100 chance of it happening in any year (1:200 if flooding is from the sea). This is normally closer to the river.
- 'extreme' flooding, further away from the river and having a 1 in 1000 chance.

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding

The site is shown to be in an area with potential for groundwater flooding to occur at the surface.

Flooding from Rivers

The site is shown to be clear of flooding from rivers.

Surface Water Flooding

The site is shown to be clear of surface water flooding with an area at risk of 1 in 30 year surface water flooding immediately south.

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Secondary A aquifer.

Superficial (drift) deposits are classed as a Secondary Undifferentiated aquifer.

Groundwater flow is likely to follow the topography and move to the east.

Filled Ground

Within 250 metres of the site there are the following suspected filled features:

- 39m east
- 49m northeast
- 225m north

Nearby Industry

There are 2 trade directory entries listed within 150m, as follows:

- 63m southwest – Ironing and home laundry services – Inactive *
- 131m east – Blinds, awnings and canopies – Active *

* not relevant due to distance/severity/significance

SITE HISTORY

Date	On Site	Off Site
1893 (1:2,500)	Housing on-site.	Reservoir 15m east, 210m northwest, 195m northwest and 130m northwest. Spring Wood Mill (woollen) 55m north. Housing 10m west. Carr Mill 65m east. Sand pit 165m south. Deep Clough 150m northwest.
1910 (1:2,500)	Little or no change.	Sand pit not shown. Housing immediately northwest and northeast.
1929 (1:2,500)	Little or no change.	No relevant change.
1963-64 (1:2,500)	Buildings on-site demolished, road now present on west of site.	Allotment gardens 15m south. Works 60m northwest.
1992 (1:1,250)	Garages on south of site.	Works to northwest now 'The Old Mill Hotel'.
2000	Garage on north of site.	No relevant change.
2021 (1:10,000)	Southeast garage demolished.	Health Centre 165m southeast, otherwise no relevant change.

DISCUSSION

Contamination

The site has previously been occupied by houses and domestic garages. There is potential for contaminants to be present in demolition material (from houses and garages) and from the use of the garages due to spills, leaks or storage of materials. These would not be expected at high levels, but are expected to exceed stringent residential thresholds.

There have been no nearby industrial, or other land uses which will affect the site and no pollution incidents on or close to the site.

A cotton mill to the southeast is down the hydraulic gradient and contaminants will migrate down, away from the site.

The development will be a house with gardens. Potential pollutant linkages are considered to be:

- Direct contact with soil.
- Ingestion of soil.
- From homegrown vegetables and soil attached to vegetables.
- Inhalation and ingestion of dust.
- Sulphate attack on buried concrete.
- Contaminants entering drinking water pipes.

A moderate risk to householders is considered possible.

Controlled Waters

There is an underlying Secondary A aquifer beneath clay. There are no nearby abstraction points, source protection zones or open water courses.

The nearest surface water receptor is a reservoir 18m east.

Although the gardens will allow rainwater to pass through the surface soils, contamination is not expected at high levels. The underlying clay will impede the migration of water, and it is anticipated there will be no risk to controlled waters.

Landfill Gas/Ground Gas

There are no landfill sites or significant filled features within 250 metres.

The findings suggest no credible landfill or ground gas risk from off-site sources.

There may be filled ground on-site in the area of former house. If a significant thickness is present, including degradable material, a low gas risk may be present.

Radon

Basic radon protection measures are required.

Flooding from Rivers

The Environment Agency maps show that this site is clear of flooding from rivers.

Groundwater and Surface Water Flooding

The site is shown to be clear of areas of surface water flooding, with an area at risk of 1 in 30 year surface water flooding immediately south.

The site is shown to be in an area with potential for groundwater flooding to occur at the surface. Bearing in mind the development includes a basement this is a potential hazard for excavations and will need to be taken into account in the basement design.

Foundations

It is expected that made ground will be present, with underlying clay. The basement is expected to take foundations below the made ground, but a range of options may need to be considered. If foundations are to be on clay the shrinkage potential of the clay needs to be determined, to ensure foundations are below the potential effects of tree root shrinkage.

INDUSTRY PROFILE

The site has had no industrial use. Made ground/demolition rubble and domestic garages and possible contamination sources.

Industry	Possible Contaminants
Possible Contaminants	Metals: e.g. copper, zinc, chromium, nickel, lead, arsenic, Inorganic compounds: cyanide, sulphates Mineral oils, fuel oils (TPHs) General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included with this desk study to show the potential pollutant linkages with this site.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	Inhalation	Yes
	Off-site	Migration off-site	Possible
Inorganic contaminants	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Yes
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	Yes
Hydrocarbons	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Yes
	Service pipes	Seeping into drinking water pipes	Yes
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	No
Landfill gas	End-users - in buildings	Seeping into buildings, explosion, asphyxiation	Unlikely
Radon	End-users - in buildings	Seeping into buildings	No

CONCLUSION

Contamination

Taking into account the past use of the site it is thought unlikely that contamination will be present on the site at high levels. However, low levels are expected, exceeding stringent residential thresholds.

An intrusive investigation is required, consisting of boreholes/ trial holes and tests to confirm the findings of this desk study/the presence/absence and extent of contamination on the site.

There are no specific point sources for contamination and the investigation will need to target proposed gardens, proposed house and provide all round coverage.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary at this stage. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

The findings suggest no credible, off-site, landfill or ground gas sources.

Made ground is expected on-site and, if a significant thickness is present, with degradable material, it may pose a low gas risk. It is suggested the depth and nature of made ground is assessed, and the requirement for monitoring or gas protection decide at that stage. If the finding suggests a possible risk, these may be incorporated into the basement design.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers.

The maps indicate that the area is clear of surface water flooding with an area at risk of 1 in 30 year surface water flooding immediately south. These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

The area has potential for ground water flooding to occur at the surface. It is suggested the water levels area monitored.

Foundations

A series of boreholes are required in the area of the proposed building to allow the most suitable foundations to be designed.

Plasticity tests are required to confirm the shrinkage potential of the clay.

Yours faithfully

on behalf of Worms Eye Ltd

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Ordnance Survey Plan

Published 1955 - 1956

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1982 - 1987

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping
Published 1999
Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).
