

PFP Minor Developments:

JP-S2: Carbon and Energy: The relocated stables will have energy efficient stable LED lights only in use when staff need access on dark nights/early mornings. Otherwise switched off. The Riding Centre had had an Independent Energy Assessment in March 2024 as part of the VCSE Energy Efficiency Scheme funded by Government. Subject to funding we will be implementing some of the recommendations, that do not require planning. Implementation of solar panels was recommended but being considered given the Conservation Area status. A new Equine Carbon Calculator has been developed which we will be considering.

JP-C2: Digital Connectivity: Not aware that the Riding Centre will have access to super fast full fibre anytime soon.
