

Updated response from GMEU

The amended plans do not materially change the ecological issues associated with this development. Previous recommendations other than invasive species still apply.

Invasive Species

The proposed invasive species management plan whilst becoming date, still demonstrates a commitment to preventing the spread of Japanese knotweed and Himalayan balsam. Satisfied that a condition along the following lines can be applied.

*Prior to any earthworks or vegetation clearance an updated invasive species survey and management plan will be supplied to and agreed in writing by the LPA*
