

Thank you for consulting GMEU on this application for installation of four rapid electric charging stations and ancillary equipment including one fully accessible EV charging bay. The application appears to be exempt from BNG, and would only impact on existing hardstanding/low ecological value habitat.

As with most planning applications the following general advice applies:

- Protected species can turn up in unexpected places and the granting of planning permission does not negate the need to abide by the laws which are in place to safeguard biodiversity. An informative should be used so that the applicant is aware that they must seek ecological advice should they find or suspect that the proposals will impact on protected species.
- Work that will impact on habitats where nesting birds may be present (for example demolition of a building or works to trees and other vegetation including undergrowth like bramble), should not be undertaken in the main bird nesting season (March – August) unless suitable checks for active bird nests have been undertaken.
- Planning policy encourages enhancements and net gains for biodiversity to be delivered through the planning system. Wherever possible measures to enhance the site for biodiversity should be secured as part of this planning application.

Kind regards,

Ecology Planning Manager

Greater Manchester Ecology Unit (GMEU)
