Drainage Proposals

Ref:GS.250324.C.1

We have considered the hierarchy of sustainable drainage options as well as the submitted Ministerial Statement (2014) on the matter, which notes that there is no requirement for a sustainable drainage system (SUDS) for development for less than 10 houses.

The proposal is for surface water to be recycled, providing grey water for the proposed dwelling and with recycled water thereafter being directed to a biodisc.

Please see supplied trade brochure by Kingspan for details of the proposed rainwater harvesting system.
