Appendix 3: Agricultural Land Classification Map	15

1. Introduction

- 1.1 This Site Selection Assessment has been prepared by Low Carbon Alliance on behalf of Taiyo Power & Storage Ltd. (TPS) to accompany a full planning application to Bury Metropolitan Borough Council (BMBC) for a Battery Energy Storage System (BESS) facility, comprising battery containers, transformers/inverters, storage and sub-stations, temporary construction access and permanent operational access, along with associated cable routing on land to the East of Shore Top Farm off Ringley Road West, Radcliffe.
- 1.2 The purpose of this Assessment report is to set out a reasoned justification for the proposed location of the site, which is subject to this application for permission. This will include a detailed explanation of the methodology which has been used to appraise the suitability of potential alternative sites.

2. Proposal

2.1 The proposed development is for a Battery Energy Storage System (BESS) facility comprising the following key components:

- 13 battery containers
- 2 transformers/invertors
- 1 DNO substation
- 1 Customer substation
- 1 Storage container
- 2.4m high gates and fencing
- New landscape planting
- Operational maintenance access via Ringley Road West
- Construction Access via Wood Street
- Underground cable connection to the Radcliffe Primary substation to the north.

3. Relevant Planning Policy

- 3.1 There is no specific guidance relating to the preparation of a site selection report outlining potentially developable land for a Battery Energy Storage System (BESS) development. The methodology has therefore been informed by industry standards and good practice for similar BESS developments, as well as specific locational requirements. Key requirements include:
- The site's proximity to electrical infrastructure (i.e. an existing electricity substation of sufficient scale and capacity to accommodate a BESS in the local and area-wide electricity network and capacity for additional connections).
 - A relatively level and clear site without significant tree cover, water features or existing structures.
 - Appropriate and functional vehicular access, both for construction purposes and the operational phase of the development, with minimal highway alterations/improvements required.
 - Compatible surrounding land uses.
 - Suitable separation distances from residential properties.
 - Existing landscape screening, or the potential for new planting to screen the development and minimise any visual impacts.
 - Avoidance of environmental designations.
 - Outside of a flood risk area.
 - A willing landowner.
- 3.2 The National Planning Policy Framework NPPF confirms that the wider environmental benefits associated with the increased production of energy from renewable sources can be used to justify a very special circumstances case for developing within the Green Belt.
- 3.3 In changes made to the NPPF in December 2024, paragraph 163 was added to make clear that climate change is an important consideration in decision-making: *"The need to mitigate and adapt to climate change should also be considered in preparing and assessing planning applications, taking into account the full range of potential climate change impacts"*.
- 3.4 Paragraph 162 confirms that plan making should take a proactive approach to mitigating and adapting to climate change.
- 3.5 Additionally, paragraph 168(a) of the NPPF introduces a requirement to "give significant weight to the benefits associated with renewable and low carbon energy generation and the proposal's contribution to a net zero future" when determining planning applications for "all

forms of renewable and low carbon energy developments and their associated infrastructure
(new words underlined).

- 3.6 National Policy Statement (NPS) EN1 confirms that battery storage has a key role to play in achieving net zero and providing flexibility to the energy system, so that high volumes of low carbon power, heat and transport can be integrated. Storage is needed to reduce the costs of the electricity system and increase reliability by storing surplus electricity in times of low demand to provide electricity when demand is higher.
- 3.7 Due to the site's location within the Green Belt, special consideration has been given to the presence of other sites within a reasonable distance that are not located within the Green Belt. This is explored in further detail in the following sections of this report. This is done, despite there being no requirement within national or local planning policy for applications for BESS within the Green Belt be accompanied by an assessment of alternative sites outside the Green Belt. It is also provided in response to pre-application comments from BMBC.

4. Site Selection Methodology

- 4.1 When identifying potential sites for the development of energy storage facilities TPS undertakes a sequential approach, following 3 key stages.

Step 1

- 4.2 A fundamental requirement for an energy project is a suitable grid connection point which, due to an ageing electricity network, increases in 'embedded generation' and the requirements for grid reinforcement works are extremely difficult to identify.
- 4.3 Using capacity/heat maps provided by National Grid, TPS identified grid supply points with potential export capacity, comparative to other substations in the ENW region. The search area included the entire extent of the distribution network area of Electricity North West Limited (ENW), as shown in Appendix 1.

Step 2

- 4.4 Following the identification of grid supply points with a potentially suitable export capacity, the next step in the sequential test involved identifying a suitably proximate site, balancing planning and environmental designations and viable distance from the substation.
- 4.5 In 2021 TPS engaged the services of the land agent Carter Jonas to identify sites in the north west of England suitable for renewable energy development with a capacity between 5 and 50MW.
- 4.6 Land surrounding the grid supply points were then scoped for high level constraints by Carter Jonas, using the following key parameters when selecting a site for progression:
- Grid connection proximity & route relative to available export capacity
 - Agricultural land grade
 - Topography
 - Environmental constraints (all environmental, heritage, landscape designations)
 - Rights of way
 - Visual impact and proximity to sensitive receptors
 - Land ownership
 - Fragmentation of array blocks (including overhead lines)
 - Vehicle accessibility

- 4.7 Using the above parameters, 49 potentially suitable sites were identified, and the landowners approached by Carter Jonas and shortlisted for further investigation. The 49 shortlisted sites and associated development options are provided at Appendix 1.
- 4.8 As part of the step 2 process for the Radcliffe Primary Substation, it was identified that a to make efficient use of the likely contracted grid connection and to offer meaningful landscaping and on-site biodiversity net gain (BNG), a landholding of ~1-1.25ha would be required.
- 4.9 Regarding grid connection proximity parameters, the further the point of connection (PoC) from the development site, the less feasible providing the connection is, due to the additional costs of cables, installation, greater third-party landowner involvement and negotiations, environmental management and mitigation.
- 4.10 Whilst the Radcliffe Primary Substation was found to hold relative export capacity within the ENW search area, the export capacity available remains low and accordingly, a proportionate and appropriate search area of 1km radius from the PoC was chosen in order to render a viable project, meaning that sites outside of this area cannot be regarded as suitable alternatives. The 1km radius represents the greatest distance that the project would remain viable. Beyond 1km, it was deemed that the costs associated with cables, installation, greater third-party landowner involvement and negotiations, environmental management and mitigation, would be prohibitive and render the project unviable.

Step 3

- 4.11 Following identification of suitable capacity at the Radcliffe Primary Substation and establishing a 1km radius search area, the area was studied more closely for feasibility/constraints considerations, including local designations. The scoped area is shown in Figure 1 below and in Appendix 2.

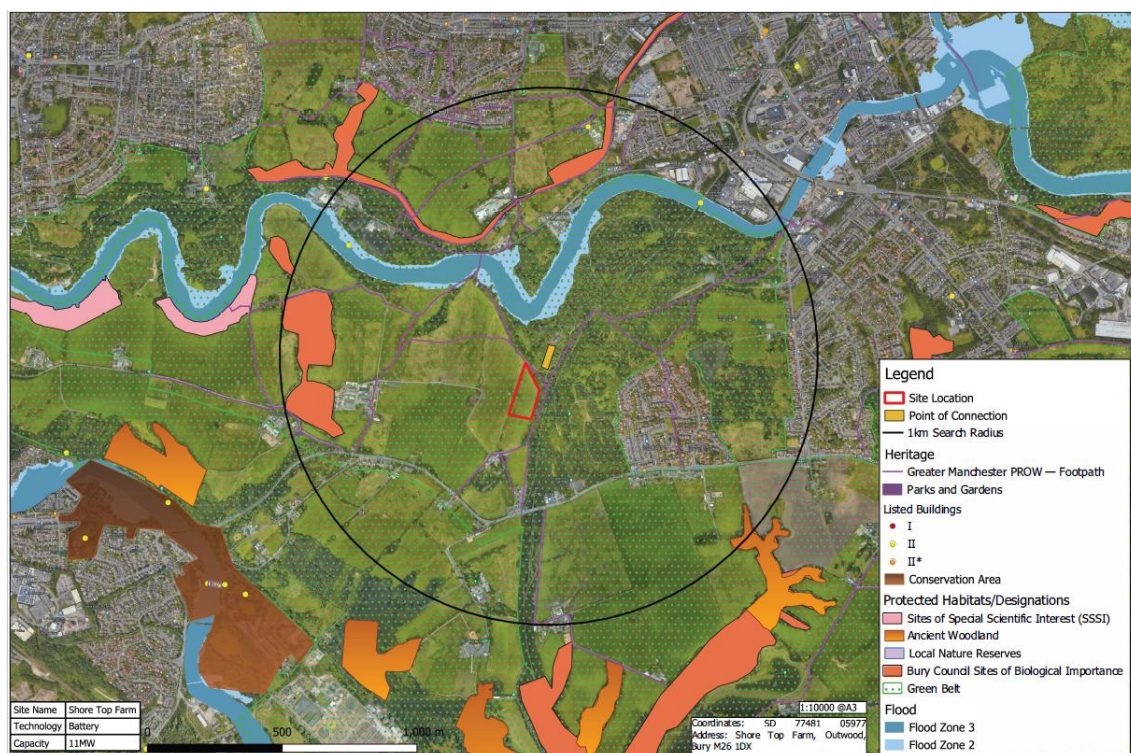

Figure 1: Step 3 Constraints Mapping

- 4.12 Whilst TPS and other renewable technology developers have always prioritised land for developments that are not affected by environmental or planning designations, such as Green Belt, National Parks, National Landscapes (formerly AONBs) and Best and Most Versatile (BMV) agricultural land, available capacity within the electricity network has been most significantly reduced outside of these designated areas. As time has passed, this has resulted in an increased need to consider whether acceptable sites could be developed in these areas.
- 4.13 The site selection process eliminated areas of Flood Zones 2 and 3 and areas adjacent to the riverbanks of the River Irwell; avoided statutory landscape, heritage and ecological designations, and the use of BMV land; and applied separation from residential areas and heritage assets.
- 4.14 Almost all of land within the 1km radius is located within the Green Belt, with the only areas not designated Green Belt consisting of built-up urban areas.
- 4.15 A large proportion of the search radius is also covered by existing woodland, the Outwood Country Park, the Manchester-Bolton-Bury Canal, the River Irwell and associated wildlife links, Sites of Biological Importance (SBIs), and ALC Grade 3, shown in Figure 2 below and

in Appendix 3. These areas have been ruled out and considered unsuitable for the proposed development.

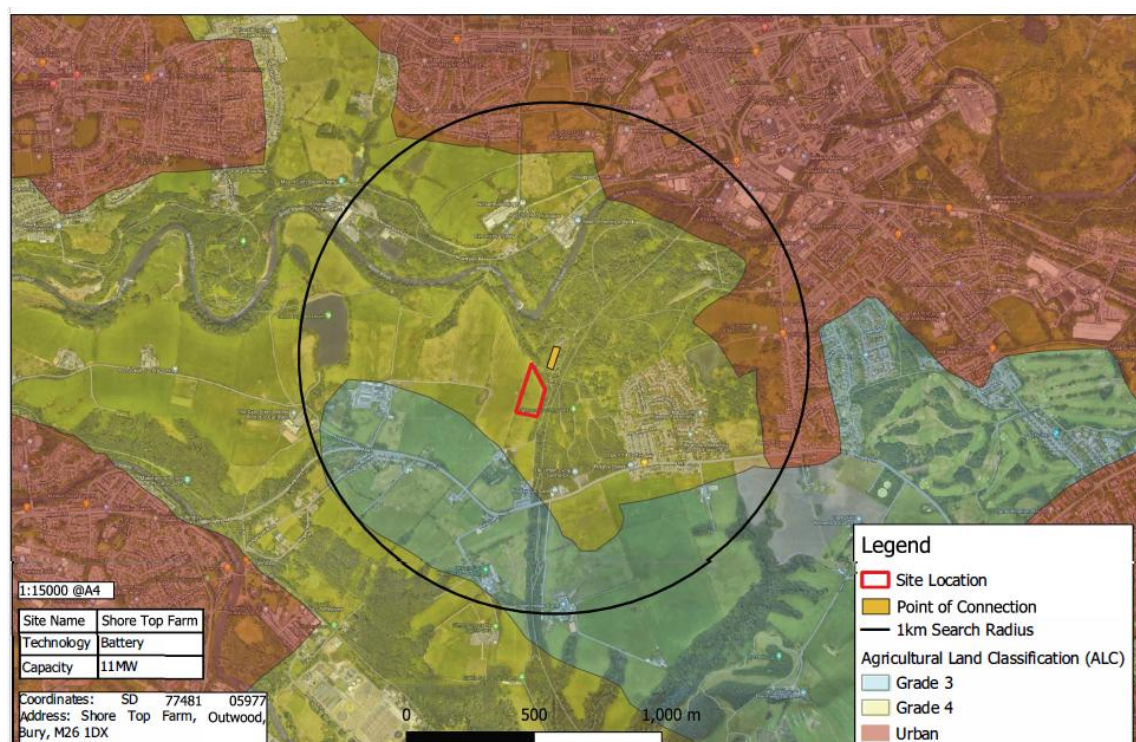

Figure 2: Agricultural Land Classification

- 4.16 Furthermore, preference was given to sites where the overall landscape impact and visibility of the site is limited, or can be made so with appropriate visual screening, with consideration given to whether the site is located within locally designated landscape areas. The landscape character of the locality is already mixed with urban and infrastructure influences, whilst some of the boundary edges are lined with shrubs/hedgerows and trees, which are not covered by Tree Protection Orders (TPOs).
- 4.17 BMBC maintains a Brownfield Land Register, which identified no suitable brownfield or semi-industrial sites within the 1km search area.
- 4.18 Whilst the search area is largely covered by Green Belt, with the exception of the urban/built-up areas of Radcliffe, there are very special circumstances which exist that justify the proposed development as being acceptable. Further discussion regarding the very special circumstances are discussed in a separate Planning Access and Design Statement.

- 4.19 Subsequent to the above 1km search area scoping, several landowners with suitable sites were approached by Carter Jonas in 2021 to establish interest in entering an agreement to develop a battery storage facility on their land.
- 4.20 Following this process, a willing landowner with a suitable site was identified, on land to the east of Shore Top Farm and to the south of the Radcliffe Primary Substation. This land now forms the site of the proposed development.

5. Conclusion

- 5.1 The Site Selection Assessment has followed a 3 stage process starting with a large geographic search area, consisting of the ENW region which was sequentially reduced to an area surrounding the Radcliffe Primary Substation.
- 5.2 Following this process, the site selected is deemed to offer the most favourable balance of development characteristics and a suitable location for a BESS development due to the distance from residential receptors and proximity to an existing substation and suitable transport routes, meaning it would have minimal environmental impacts.
- 5.3 The proposal's proximity to the existing PoC (approximately 100m) would mean minimising electrical losses (losses being a function of the length of connection) and therefore minimising any potential environmental effects of any longer-distance connecting cable routes, whilst supporting project viability.
- 5.4 This report therefore demonstrates that, although the site is within the Green Belt, there are no other more preferential, suitable or available locations either within or outside of the Green Belt within the required area of search. There are no better or more suitable/feasible sites to locate the proposed development.

Appendix 2: Step 3 Constraints Mapping

Radcliffe BESS (circa 1.25ha) - Site Selection Report

Legend

- Site Location
- Point of Connection
- 1km Search Radius
- Heritage
 - Greater Manchester PROW — Footpath
 - Parks and Gardens
- Listed Buildings
 - I
 - II
 - II*
- Conservation Area
- Protected Habitats/Designations
 - Sites of Special Scientific Interest (SSSI)
 - Ancient Woodland
 - Local Nature Reserves
 - Bury Council Sites of Biological Importance
 - Green Belt
- Flood
 - Flood Zone 3
 - Flood Zone 2

Project Name	Radcliffe BESS
Technology	Battery
Capacity	11MW

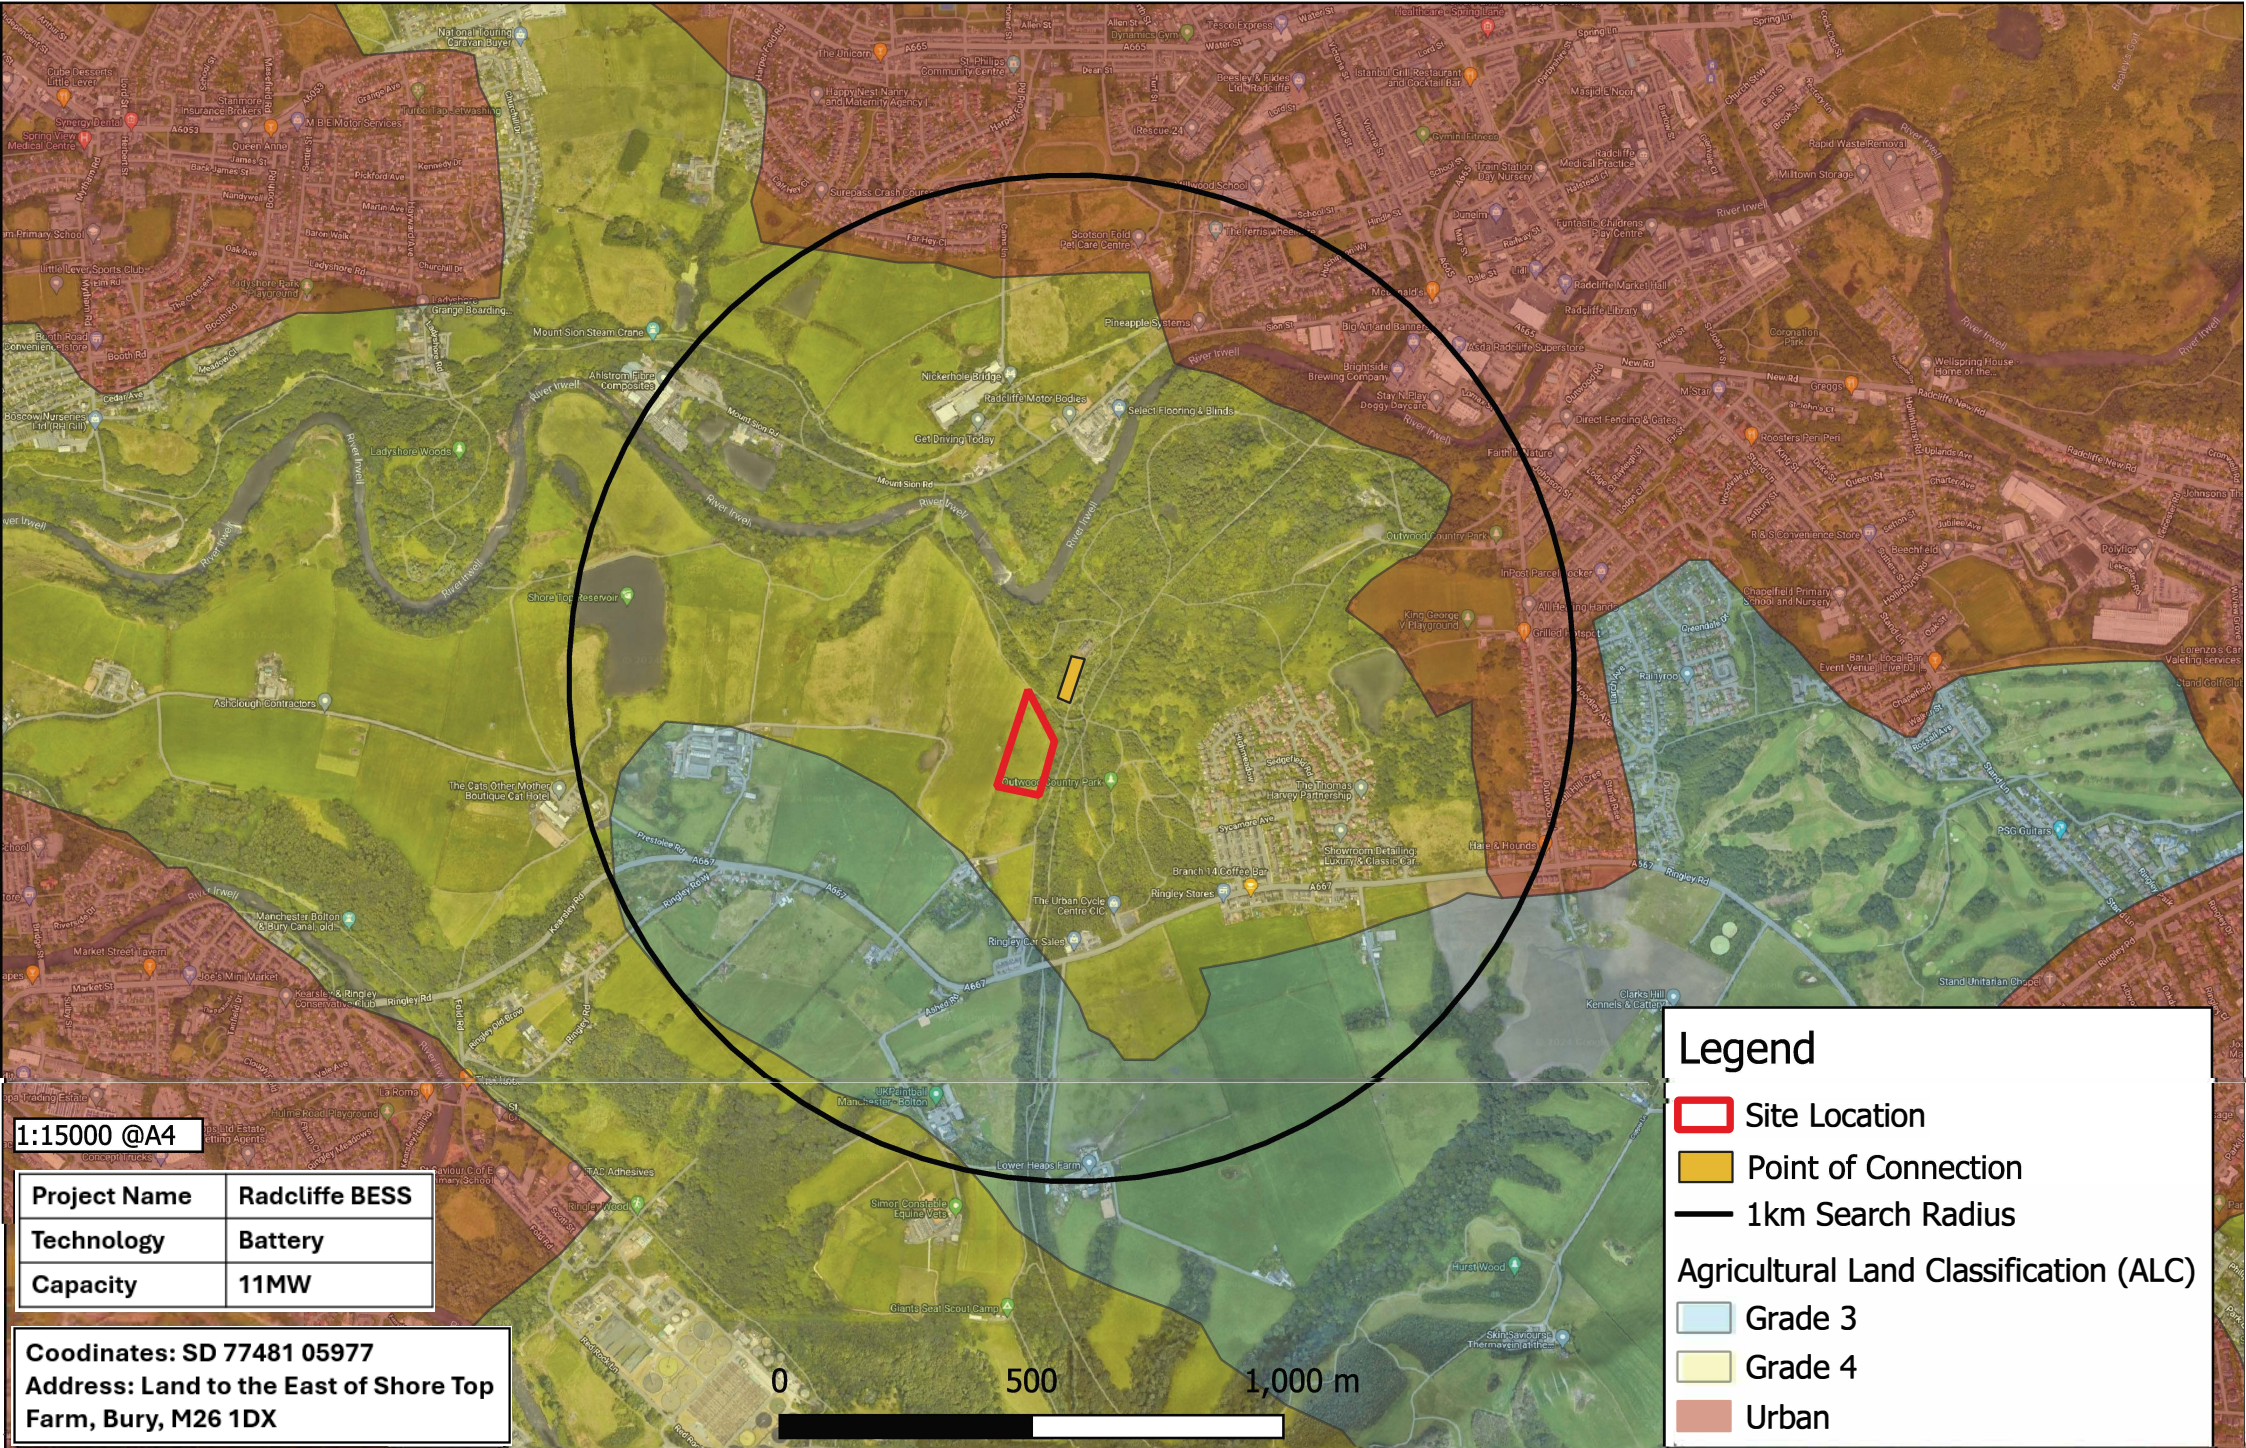

Coodinates: SD 77481 05977
Address: Land to the East of Shore Top Farm, Bury, M26 1DX

1:10000 @A3

Appendix 3: Agricultural Land Classification Map

Radcliffe BESS - Site Selection Report

Legend

- Site Location
- Point of Connection
- 1km Search Radius

Agricultural Land Classification (ALC)

- Grade 3
- Grade 4
- Urban

1:15000 @A4

Project Name	Radcliffe BESS
Technology	Battery
Capacity	11MW

Coodinates: SD 77481 05977
Address: Land to the East of Shore Top Farm, Bury, M26 1DX
