WHALLEY ROAD, RAMSBOTTOM, BURY, BL0 0DG
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination and landfill gas issues.

SITE DESCRIPTION

The site is rectangular, about 15 by 6m, located to the west of Whalley Road in Ramsbottom and at OS Grid Reference 380000, 417460. The site, inspected on 7/11/23 by Mr M Whitaker (Geotechnician), comprises a generally level grass surfaced garden. At the west is a retaining wall, retaining about 1m, with vacant land at the lower level. There are no obvious signs of contamination.

The area slopes down to the northwest. To the west are fields, to the south a drive with house beyond and to the north a track slopes down to the west, leading to the back of nearby houses, with a house further north.

PROPOSED DEVELOPMENT

It is proposed to build a detached house which almost fills the site with a patio to the rear (west) and parking to the front (east) under the first floor kitchen.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey.
- Geotechnical Assessment.
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 3/11/23
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 7/11/23

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Discharge consents
- Pollution incidents
- Water abstraction points or source protection zones
- Hazardous substances sites or fuel stations
- Sensitive land uses (other than greenbelt)

Geology of Site

The geological map indicates that the underlying solid rocks are Fletcher Bank Grit sandstone.

Surface drift is shown as glacial till (boulder clay) of unknown thickness. Natural subsidence hazards are shown as low to no hazard.

Surface Water (Hydrology)

Cross Bank Brook flows southwest in a culvert, 137m north.

The area slopes down to the northwest, the flow of surface water is expected to be in this direction.

Flooding (General)

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding - Potential for groundwater flooding to occur at the surface.

Flooding from Rivers - Clear of flooding from rivers.

Surface Water Flooding – Clear of surface water flooding with an area at risk of 1 in 100 year surface water flooding immediately east.

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Secondary A aquifer.

Superficial (drift) deposits are classed as a Secondary Undifferentiated aquifer.

Groundwater flow is likely to follow the topography and move to the northwest.

Landfill Sites

There are 2 landfill sites shown within 250m as follows:

- 65m northeast – Deposited waste included inert waste, Brickwork, Concrete, Carbon, KieselR – not filter materials, Glass, Pottery, China, Enamel, Ceramic, Mic, Non/v.slow decomposing waste – Dated 1991.
- 118m north – Deposited waste included inert waste.
- 177m east – quarry landfill site – issued in 2020.

Filled Ground

Within 250 metres of the site there are the following suspected filled features:

- 185m northwest

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Mining

The Coal Authority Interactive Mapping shows:

- No nearby coal seams.
- No nearby mine entries
- No shallow unrecorded workings.
- No underground workings.

Nearby Industry

There are 3 trade directory entries listed within 250m, as follows:

- 150m north – Waste disposal services – Inactive *
- 150m north – MOT testing centre – Inactive *
- 150m north – Woodburning stoves – Inactive *

* not relevant due to distance/severity/significance

SITE HISTORY

Date	On Site	Off Site
1850-51 (1:10,560)	Undeveloped plot.	Cross Bank Brook 140m north. House immediately south. Sandstone quarry 45m southeast. Shuttleworth Mill (cotton) 105m northwest. Numerous ponds/reservoirs 65m northeast, 100m northeast, 90m northwest and 130m northwest. New Mill (cotton) 145m northeast.
1893 (1:2,500)	House on west of site.	Reservoir 195m northwest and 120m northwest. New Mill (labelled Top Mill) disused. Houses 5m north.
1910 (1:2,500)	Post office built across site.	Top Mill now used for bleaching. Filter beds 140m northeast.# School 40m southwest.
1938 (1:2,500)	Little or no change.	Top Mill disused. Vicarage 80m southwest.
1963-64 (1:2,500)	Little or no change.	School to southwest now a church.
2003 (1:10,000)	Post office demolished, site vacant.	No reservoirs shown, presumed filled. Brook 135m northeast. Top Mill demolished.
2023 (1:10,000)	Little or no change.	Brook presumed culverted.

DISCUSSION

Contamination

The site was formerly occupied by a small post office. This is not a use from which contaminants would be expected. However, made ground may have introduced prior to building the post office and demolition rubble left on site following demolition. These can have low levels of contaminants which exceed stringent residential thresholds, however, the site will be fully hard-surfaced, preventing direct contact with surface soils, and contaminants are unlikely to exceed appropriate thresholds. Made ground, if present, is most likely to be found at west, although if the post office had a basement, demolition rubble may be present across the site.

There have been no nearby land-uses which will affect the site and no pollution incidents on or close to the site.

The development will be a detached house with small patio and a parking area. There will be no garden. Potential pollutant linkages are considered to be:

- Sulphate attack on buried concrete.
- Contaminants entering drinking water pipes.

A low risk to householders is anticipated.

Controlled Waters

There is an underlying Secondary A aquifer beneath clay. There are no nearby water abstraction points or source protection zone.

Cross Bank Brook flows southwest in a culvert, 137m north.

On completion, the building and patio will cover the site, minimising the risk of rainwater passing through the surface soils. Furthermore, contamination is not expected at high levels, the underlying clay will impede the migration of water, and it is expected there will be no risk to controlled waters.

Landfill Gas/Ground Gas

There are two landfill sites within 250 metres of the site. These are potential sources of landfill/largely ground gases which could migrate to and present a risk to the development. Waste types are shown to be inert which suggests a low to moderate gas generation potential.

Bearing in mind the distances from the site, and underlying clay which will impede the passage of gases, it is considered that there is likely to be a low risk to the development.

Radon

Radon protection measures are not required.

Flooding from Rivers

The Environment Agency maps show that this site is clear of flooding from rivers.

Groundwater and Surface Water Flooding

Clear of surface water flooding, with an area at risk of 1 in 100 year surface water flooding immediately east, and in an area with potential for groundwater flooding to occur at the surface.

INDUSTRY PROFILE

The site has had no industrial use. However, made ground and demolition rubble may be present.

Industry	Possible Contaminants
Made ground / Demolition rubble	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Fuel: petrol, diesel, MTBE (TPHs) Asbestos General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	No pathway	No
	Off-site	Migration off-site	Possible
Inorganic contaminants	Householders	No pathway	No
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	Yes
Hydrocarbons	Householders	No pathway	No
	Service pipes	Seeping into drinking water pipes	Yes
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	No
Landfill gas	End-users (inside)	Seeping into buildings, explosion, asphyxiation	Yes
Radon	End-users (inside)	Seeping into buildings	No

CONCLUSION

Contamination

Taking into account the past use of the site it is unlikely that contamination will be present on the site at high levels. Although low levels may be present these are unlikely to pose a risk to a hard-surfaced development.

A limited intrusive investigation is suggested, consisting of boreholes/trial holes and tests to confirm the presence/absence of contamination. This will also help to classify soils for disposal off-site, design buried concrete and select water pipes. There are no specific point sources for contamination.

If the land to the north is found to be in the ownership of the site, supplementary tests may be required on that area.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

There are nearby landfill sites and a low gas risk is anticipated. A gas testing programme is required.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers and surface water flooding.

An area at risk of 1 in 100 year surface water flooding is shown immediately east. These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Yours faithfully
on behalf of Worms Eye Ltd

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Ordnance Survey Plan

Published 1955 - 1956

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2023

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).
