32 MANCHESTER ROAD, RAMSBOTTOM, BURY, BL0 0DH
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination and landfill gas issues.

SITE DESCRIPTION

The site is irregular shape, 20 by 22m, to the west of Manchester Road in Ramsbottom and at OS Grid Reference 380020, 416730. The site, inspected on 13/2/25 by Mr M Whitaker, forms a terraced garden to the south of No.32, stepping down to the west from Manchester Road. The site is mostly grass surfaced with a gravel drive at the west. No.32 to the north, is split level being level with Manchester Road at the east with a lower ground floor car park (with balcony above) at the west. There are small deciduous trees at the centre and southeast corner (not an arboricultural survey).

The area slopes down to the west. To the north are terraced houses, to the south are detached houses and to the west is a modern housing estate.

PROPOSED DEVELOPMENT

It is proposed to build a split level detached house with parking to its north, garden to south and driveway at the west as existing.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Geotechnical Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 5/2/25
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 13/2/25

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Pollution incidents
- Water abstraction points or Source protection zones
- Hazardous substances sites or Fuel stations
- Sensitive land uses (other than adopted green belt)

Geology of Site

The geological map indicates that the underlying solid rocks are Fletcher Bank Grit sandstone, in the Millstone Grit Group.

Surface drift is shown as Diamicton Till (clay) of unknown thickness. Natural subsidence hazards are shown as moderate (potential for landslide ground stability hazards) to no hazard.

Mining

The Coal Authority Interactive Mapping shows:

- Site is not underlain by probable unrecorded workings.
- No nearby coal seams or mine entries.
- Site is not underlain by underground workings.

Surface Water (Hydrology)

The nearest water course is a stream which issues 378m southwest.

The nearest discharge consent is 74m east, surface water to a tributary of River Irwell in 1993 *

The area slopes down to the west and the flow of surface water is expected to be in this direction.

* not relevant due to distance/severity/significance

Flooding (General)

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding - The site is shown to have limited potential for groundwater flooding to occur.

Flooding from Rivers - The site is shown to be clear of flooding from rivers.

Surface Water Flooding - The site is shown to be at risk of 1 in 1000 year surface water flooding.

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Secondary A aquifer and superficial (drift) deposits are classed as a Secondary Undifferentiated aquifer.

Groundwater flow is likely to follow the topography and move to the west.

Landfill/Waste Sites

There are 3 IPPC listings 159-160m southeast (>15m above the site), Waste landfilling, greater than 10 T/D with capacity greater than 25,000T, dated 2007 – 2020.

There are 3 LAPPC listings 171 – 197m east, Blending, packing, loading and use of bulk cement, and Quarry process including roadstone plants and the size reduction of bricks, tiles and concrete *

There is a landfill site (2 listings) listed 45-50m east, deposited waste included industrial waste, liquid sludge and concrete waste, dated 1983, operational as far as known.

A Licensed Waste Management Facility is located 22m southeast, management of inert or extractive waste at mine, dated 2011 *

* not relevant due to distance/severity/significance

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Nearby Industry

There are 3 LAPPC listings 171 – 197m east, Blending, packing, loading and use of bulk cement, and Quarry process including roadstone plants and the size reduction of bricks, tiles and concrete *

There are 3 trade directory entries listed within 100m, as follows:

- 21m south – Joinery manufacturers, Inactive.
- 46m southeast – Garage services, Active *
- 83m north – Garage services, Active *

* not relevant due to distance/severity/significance

SITE HISTORY

Date	On Site	Off Site
1850 (1:10,560)	Unknown building, probable house, on site.	Houses 15m northeast and 5m south. Fletcher Bank Quarry 25m east, >10-15m above the site.
1893 (1:2,500)	Little or no change.	Unknown industrial building 110m southeast. Housing immediately north. Smithy 30m northeast.
1910 (1:2,500)	Little or no change.	No relevant change.
1929 (1:2,500)	Building extended at southwest.	Quarry extended northeast, with tramway leading from the quarry to the southwest, 140m southeast of the site. Stone crusher 50m northeast.
1937 (1:2,500)	Little or no change.	Filling at quarry >50m east, >8m above the site. Quarry extended to northeast. Laundry 5m south. Works 110m southeast. Housing 150m southwest.
1963 (1:2,500)	Building demolished.	Allotment gardens 150m and 175m northwest. Fletcher Bank Quarry to east now has areas labelled "refuse tip", the closest being 40m northeast, >10m above the site. Building 110m southeast, listed as 'Works'.
1976 (1:10,000)	Little or no change.	Works 85m northeast in quarry.
1982-87	Little or no change.	M66 motorway 145m west, otherwise no relevant change.
1999 (1:10,000)	Site shown as vacant.	Works 110m southeast demolished. Building 130m southeast. New building in quarry 80m northeast.
2013 (1:10,000)	Little or no change.	Building to northeast partly demolished.
2025 (1:10,000)	Little or no change.	Works to northeast demolished.

DISCUSSION

Contamination

The site is a garden, a use from which contaminants are not expected, originally developed with a house in the 1800s (demolished circa 1950s/60s). Although not expected to be a source of contaminants, the demolition may have introduced contaminants to the ground, either during demolition or if demolition materials were left on site (e.g. asbestos, sulphate, TPHs, PAHs). TPHs and PAHs may also be present at the west from small leaks from parked vehicles.

Made ground may also have been imported onto site, with associated contaminants, before the original house was built, or post demolition.

A laundry to the south was a small feature, probably in a former house, too small for dry cleaning and not a risk to the site. Although a garage workshops to the northeast is only a short distance from the garage the hydraulic gradient is down to the west, and contaminants will migrate down the hydraulic gradient to the west not up or along to the site.

The proposal is a house with garden. High levels of contaminants are unlikely, but low levels may be present, exceeding stringent residential thresholds in places, and potential pollutant linkages are:

- Direct contact with and ingestion of soil.
- From homegrown vegetables and soil attached to vegetables.
- Inhalation and ingestion of dust.
- Sulphate attack on buried concrete.

A low risk is anticipated.

Controlled Waters

There is an underlying Secondary A Aquifer beneath clay. There are no nearby water abstraction points or source protection zones.

Although the garden will allow rainwater to pass through the surface soils, contamination is not expected at high levels. The underlying clay will impede the migration of water and it is anticipated there will be no risk to controlled waters.

Landfill Gas/Ground Gas

The site is within 250m of a landfill site. However, this is at least 10 to 15m above the site (probably higher) and gases will migrate up to the east, not down to the site. It is considered that the landfill, and earlier filling in the quarry, does not pose a risk to the site.

There are no other credible landfill or ground gas sources within 250m and no gas risk is expected.

Radon

Radon protection measures are not required.

Flooding

The EA maps show the site is clear of flooding from rivers, and in an area with limited potential for groundwater flooding to occur, but is at risk of 1 in 1000 year surface water flooding.

Foundations

The site slopes down to the west and the findings suggest there may be made ground/demolition rubble overlying clay, with possible shallow rock. Although this might suggest reasonable conditions for new foundations the site is also shown to be in an area with moderate risk for landslide stability hazards. It is recommended the structural engineer is consulted before designing the geotechnical part of the investigation and the use of a slope stability specialist may also be beneficial.

INDUSTRY PROFILE

The site has had no industrial use but demolition rubble/made ground may be present. TPHs and PAHs may also be present at the west from small leaks from parked vehicles.

Industry	Possible Contaminants
Demolition rubble/ Made ground	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Phenols Mineral oils, fuel oils (TPHs) Asbestos General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	Inhalation	Possible
	Off-site	Migration off-site	Unlikely
Inorganic contaminants	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Possible
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	Possible
Hydrocarbons	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Possible
	Service pipes	Seeping into drinking water pipes	Unlikely
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	No
Landfill gas	End-users (inside)	Seeping into buildings, explosion, asphyxiation	No
Radon	End-users (inside)	Seeping into buildings	No

CONCLUSION

Contamination

Taking into account the site history it is unlikely that contaminants will be present at high levels. However, low levels may be present, exceeding stringent residential thresholds in places, and an intrusive investigation is required, consisting of boreholes/ trial holes and tests to confirm the presence/absence and extent of contamination.

There are no specific point sources for contamination and the investigation will need to target the proposed garden, proposed house and provide all round coverage.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary at this stage. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

The findings show no credible landfill or ground gas sources and no gas risk to the development. Gas testing is not needed and no special precautions are required.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers but could be subject to 1 in 1000 year surface water flooding. These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Foundations

The site slopes down to the west and a series of boreholes are required to design appropriate foundations. It is recommended the structural engineer is consulted before designing the geotechnical part of the investigation and the use of a slope stability specialist may also be beneficial.

Yours faithfully

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

LANDMARK INFORMATION GROUP[®]

Lancashire And Furness

Published 1850 - 1851

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

10k Raster Mapping

Published 2006

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2024

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

LANDMARK INFORMATION GROUP®

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.
