

Condition 5 – the preferred colour for the containers is RAL 6009 Fir Green. The container supplier – Wernicks – suggested this colour is often preferred for rural locations as it is more 'dull' than grey and less vibrant than other shades of green.

In terms of screening – the rear and sides of the containers will be partially screened with new native woodland understory planting as per the BNG proposals. The front of the containers, we want to maintain open and clear (and welcoming) appearance. There will be an open gathering/meeting space in front, accessible from the existing path for volunteers and groups.

RAL 6009

The appearance will be similar to the image below - a standard container with shutters protecting the windows and a heavy duty door.
