

Stand Cricket Club, construction statement

Stand Cricket Club confirm that prior to commencement the contractors will not require a compound, or any moveable structures as outlined in the requirements, or storage of any machinery.

Extension to changing room block:

Plant and machinery access will be limited to a small mini digger required for groundwork. Access to the site will be down a pre-existing pathway for the extension.

Scoreboard Building:

The access to the work required for septic tank will involve pathway access as above. It is not expected that the mini digger will be required to go onto the playing ground. If required, protective matting will be placed on the ground to protect it.

New entrance to function room.

Plant and machinery access will be limited to a small mini digger required for groundwork. Access to the site will be down a pre-existing pathway for the extension and away from the playing field.

Pavilion decking.

It is not expected any plant or machinery access will be required.

Material storage:

Materials for all projects will be stored onsite in the gazebo positioned on the portion away from the playing field.

Any affected land will be restored back to original condition although it is not expected there will be any.
