26 / 28 ST PETERS ROAD, BURY, BL9 9RB
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination, landfill gas and geotechnical issues.

SITE DESCRIPTION

The site is a rectangular plot, about 16 by 14m, located to the northeast of Burns Avenue in Bury and at OS Grid Reference 380697, 408945. The site, inspected on 5/5/22 by Mr M Whitaker (Geotechnician), comprises a garden to the southeast of the existing house (26/28 St Peters Road). The site is surfaced with grass and soil, with a greenhouse at the northeast corner and two piles of rubble/garden/household waste at the west. There are no obvious signs of contamination.

There are houses to the northwest southeast and southwest. The area slopes down to the northeast from the site, but is otherwise generally level.

PROPOSED DEVELOPMENT

It is proposed to build one pair of semi-detached houses fronting Burns Avenue to the west, having gardens to the rear (east) and parking to the front (west).

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

TREES

There are mature deciduous and coniferous trees, up to about 12-15m high, along the northeast and southeast sides. This is not an arboricultural survey.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 26/4/22
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 5/5/22.

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Discharge consents
- Pollution incidents
- Water abstraction points or Source protection zones
- Landfill sites
- Hazardous substances sites
- Fuel stations
- Sensitive land uses

Geology of Site

The underlying solid rocks are indicated as sandstone of the Pennine Lower Coal Measures.

Surface drift is shown as glacial till (boulder clay) below the site with glacial sand and gravel to the northwest and river terrace deposits (clay, silt, sand, gravel) to the east. Natural subsidence hazards are shown as very low to no hazard.

Surface Water (Hydrology)

The nearest water course is the River Roch 281m southeast.

The area slopes down to the northeast, the flow of surface water is expected to be in this direction.

Flooding (General)

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding

The site is shown to have limited potential for groundwater flooding to occur.

Flooding from Rivers

The site is shown to be clear of flooding from rivers.

Surface Water Flooding

The site is shown to be clear of surface water flooding.

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Secondary A aquifer.

Superficial (drift) deposits are classed as a Secondary Undifferentiated aquifer.

Groundwater flow is likely to follow the topography and move to the northeast.

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Nearby Industry

The nearest trade directory entry is bereavement services at the cemetery, 167m northeast *

* not relevant due to distance/severity/significance

SITE HISTORY

Date	On Site	Off Site
1848 (1:10560)	Undeveloped field with possible stream running north-south	Undeveloped fields
1891. (1:500)	Undeveloped, suspected stream more clearly shown.	Cemetery 50m north. Goit 175m southeast
1909 (1:2500)	Undeveloped	No relevant change
1929 (1:2500)	Undeveloped	Houses 15m northwest
1956 (1:2500)	Garden to existing house to northwest Suspected stream not present, presumed	Existing house 10m northwest and house immediately south
1968-85	Little or no change	No relevant change
1992 (1:1250)	Little or no change	Line of goit to southeast filled,
1992-2022	Little or no change	No relevant change

DISCUSSION

Contamination

The site is a garden and historical maps suggest a stream may have crossed the site north – south, although this is unclear. There have been no use from which significantly high levels of contaminants would be expected. If a stream was present, made ground may be present along the line of this, with low levels of contaminants, exceeding stringent residential thresholds.

There have been no nearby land uses which will affect the site, and no nearby pollution incidents.

The proposed development will be houses with gardens. Potential pollutant linkages are:

- Direct contact with soil.
- Ingestion of soil.
- From homegrown vegetables and soil attached to vegetables.
- Inhalation and ingestion of dust.
- Sulphate attack on buried concrete.
- Contaminants entering drinking water pipes.

Bearing in mind the history of the site, a low risk is anticipated with possible localised contaminants along the line of the former stream.

Controlled Waters

There is an underlying Secondary A aquifer beneath clay. There are no nearby water abstraction points or source protection zones.

The River Roch is 281m southeast.

Although the gardens will allow rainwater to pass through the surface soils, contamination is not expected at high levels. The underlying clay will impede the migration of water and it is anticipated there will be no risk to controlled waters.

Landfill Gas/Ground Gas

There are no landfill sites or significant filled features within 250m. A goit about 175m southeast was filled circa 1990s, however, bearing in mind the size and underlying clay it is considered that gas would not be produced at sufficient volume to migrate through the clay to the site. Similarly, although there is a cemetery to the northeast, these are numerous small, potential, gas sources with limited material, rather than a single gas source. Gases would not be expected to be generated in sufficient volume to migrate through the clay to the site.

Although made ground may be present on site, if the suspected stream was present, this is unlikely to be deep or widespread, suggesting gas generation is unlikely to be significant.

The findings show no credible landfill or ground gas sources and no risk to the development, unless deep made ground is seen on site.

Radon

Radon protection measures are not required.

Flooding from Rivers

The Environment Agency maps show that this site is clear of flooding from rivers.

Groundwater and Surface Water Flooding

The site is shown to be clear of areas of surface water flooding.

The site is shown to be in an area with limited potential for groundwater flooding to occur.

Foundations

The geology map suggests there may be limited made ground, underlain by clay which often provides a good bearing strata for traditional shallow foundations. If foundations are to be on clay the shrinkage potential of the clay needs to be determined, to ensure foundations are below the potential effects of tree root shrinkage.

INDUSTRY PROFILE

The site has had no industrial use. Low levels of contaminants may be present if made ground is seen below the site.

Contaminant Source	Possible Contaminants
Made Ground	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Mineral oils, fuel oils (TPHs) Asbestos General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included with this desk study to show the potential pollutant linkages with this site.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	Inhalation	Unlikely
	Off-site	Migration off-site	No
Inorganic contaminants	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Possible
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	Unlikely
Hydrocarbons	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Possible
	Service pipes	Seeping into drinking water pipes	Unlikely
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	No
Landfill gas	End-users - in buildings	Seeping into buildings, explosion, asphyxiation	Unlikely
Radon	End-users - in buildings	Seeping into buildings	No

CONCLUSION

Contamination

The findings suggest it is unlikely that contamination will be present on the site at high levels. Low levels, exceeding stringent residential thresholds may be present, if made ground is seen, along the line of the suspected former stream.

A limited investigation is suggested, consisting of trial holes and tests to confirm the presence/absence and extent of contamination on the site. The line of the suspected former stream should be investigated.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

The findings suggest there are no credible landfill, or ground gas sources, unless significantly deep made ground is seen.

Gas testing is not needed and no special precautions are required, unless made ground >1m is seen, in which case this risk and the need for monitoring will need to be re-assessed.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers.

The maps indicate that the area is clear of surface water flooding.

These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Foundations

A series of boreholes are required in the area of the proposed building to allow the most suitable foundations to be designed.

Plasticity tests are required to confirm the shrinkage potential of the clay.

Yours faithfully

on behalf of Worms Eye Ltd

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Lancashire And Furness

Published 1891

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1848 - 1851

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping
Published 1999
Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
