

NOTICE OF PLANNING PERMISSION

Town and Country Planning Act 1990 Town and Country Planning (Development Management Procedure) (England) Order 2015

To:

Mr Oliver Meads
Meads Architecture
67 Green Lane
Buxton
Derbyshire
SK17 9DJ

On Behalf Of:

Mr Matthew Chapman
Radcliffe Car Auction Logistics LTD
Lancaster House
70-76 Blackburn Street
Radcliffe
M26 2JW

PART 1 - Particulars of Application

Application Number: 72335

Date of Registration: 30/09/2025

Proposal:

Erection of industrial unit (Use Class B2/B8)
with associated parking

Location:

Globe Industrial Estate, Darbyshire Street,
Radcliffe, Manchester, M26 9TA

PART 2 - Particulars of Decision

Bury Metropolitan Borough Council hereby give notice in pursuance of the provisions of the Town and Country Planning Act 1990 that permission has been **GRANTED** for the carrying out of the development referred to in Part 1 hereof in accordance with the application and plans submitted subject to the following conditions:-

- 1 The development must be begun not later than three years beginning with the date of this permission.
Reason. Required to be imposed by Section 91 Town & Country Planning Act 1990.

- 2 This decision relates to drawings -

Revised proposed location plan S(00) 01 rev A
Revised proposed existing site plan S(00) 02 rev B
Revised proposed site plan S(00) 03 rev B
Revised proposed unit plans L(00) 01 rev A
Proposed elevations L(00) 02
Proposed vehicular tracking S(00) 04
Existing and proposed Spring Lane elevations L(00) 03
Existing and proposed Darbyshire Street elevations L(00) 04

and the development shall not be carried out except in accordance with the drawings hereby approved.

Reason. For the avoidance of doubt and to ensure a satisfactory standard of design pursuant to the policies of the Bury Unitary Development Plan and Places for Everyone Joint Development Plan listed.

- 3 No development hereby permitted (except demolition and site clearance) within any approved phase shall take place until the works relating to land contamination detailed below are fully completed:
With consideration to human health, controlled waters and the wider environment, the following documents shall be completed to characterise potential risk to sensitive receptors and submitted to the Local Planning Authority for approval:

- I. Preliminary Risk Assessment (PRA). Submission of this document is the minimum requirement.
- II. Generic Quantitative Risk Assessment (GQRA). Submission of this document only if PRA requires it.
- III. Detailed Quantitative Risk Assessment (DQRA). Submission of this document if GQRA requires it.

Reason. To prevent unacceptable risk to Human Health and Controlled Waters and to prevent pollution of the environment in accordance with the aims and Paragraphs 187(f), 196 and 197 of the National Planning Policy Framework (December 2024).

- 4 No development hereby permitted (except demolition and site clearance) within any approved phase shall take place until the works relating to land contamination detailed below are fully completed:
In accordance with the findings of site characterisation and risk assessment as previously approved, documents from the following shall be submitted to the Local Planning Authority for approval:

- I. Remedial Options Appraisal.
- II. Remediation Strategy.
- III. Verification Plan.

Reason. To prevent unacceptable risk to Human Health and Controlled Waters and to prevent pollution of the environment in accordance with the aims and Paragraphs 187(f), 196 and 197 of the National Planning Policy Framework (December 2024).

- 5 The development hereby permitted within any approved phase shall not be occupied/brought into use until the works relating to land contamination detailed below are fully completed:
Where remediation is required, it shall be carried out in full accordance with the approved Remediation Strategy.
A Verification Report must be submitted to the Local Planning Authority for approval upon completion of remediation works. The Verification Report must include information validating all remediation works carried out; details of imported materials (source/quantity/suitability); details of exported materials; and details of any unexpected contamination.

Reason. To prevent unacceptable risk to Human Health and Controlled Waters and to prevent pollution of the environment in accordance with the aims and Paragraphs 187(f), 196 and 197 of the National Planning Policy Framework (December 2024).

- 6 The development hereby approved within any approved phase shall not be brought into use until written confirmation is provided to the Local Planning Authority that unexpected or previously unidentified contamination was not encountered during the course of development works.

If, during development, unexpected contamination is found to be present on the site, no further works shall be carried out at the affected location until the following are

submitted to the Local Planning Authority for approval:

- I. Risk Assessment (GQRA or DQRA);
- II. Remediation Strategy & Verification Plan;

If remediation is required, it shall be carried out in accordance with the approved Remediation Strategy. Upon completion of remediation works, a Verification Report shall be submitted for approval. The Verification Report must include information validating all remediation works carried out; details of imported materials (source/quantity/suitability); details of exported materials; and details of any unexpected contamination.

Reason. To prevent unacceptable risk to Human Health and Controlled Waters and to prevent pollution of the environment in accordance with the aims and Paragraphs 187(f), 196 and 197 of the National Planning Policy Framework (December 2024).

- 7 Prior to the commencement of development, details of a sustainable surface water drainage scheme and a foul water drainage scheme shall be submitted to and approved in writing by the Local Planning Authority. The drainage schemes must include:
- (i) An investigation of the hierarchy of drainage options in the National Standards for Sustainable Drainage Systems (or any subsequent amendment thereof). This investigation shall include evidence of an assessment of ground conditions and the potential for infiltration of surface water;
 - (ii) A restricted rate of discharge of surface water agreed with the local planning authority (if it is agreed that infiltration is discounted by the investigations);
 - (iii) Levels of the proposed drainage systems including proposed ground and finished floor levels in AOD;
 - (iv) Incorporate mitigation measures to manage the risk of sewer surcharge where applicable; and
 - (v) Foul and surface water shall drain on separate systems.
- The approved schemes shall be in accordance with the National Standards for Sustainable Drainage Systems (2025) or any subsequent replacement national standards.
- Details of proposed maintenance arrangements should also be provided
- Prior to occupation of the proposed development, the drainage schemes shall be completed in accordance with the approved details and retained thereafter for the lifetime of the development.
- Reason. The current application contains insufficient information regarding the proposed drainage scheme to fully assess the impact. To promote sustainable development and reduce flood risk pursuant to Unitary Development Plan Policies EN7/3, EN7/5, JP-S4 and chapter 14 - Meeting the challenge of climate change, flooding and coastal change of the NPPF.
- 8 No above ground development shall commence (excluding the demolition of existing structures) until;
- a) a scheme of intrusive investigations has been carried out on site to establish the risks posed to the development by past shallow coal mining activity; and
 - b) any remediation works and/or mitigation measures to address land instability arising from past coal mining legacy, as may be necessary, have been implemented on site in full in order to ensure that the site is made safe and stable for the development proposed.
- The intrusive site investigations, remedial works and mitigatory measures shall be carried out in accordance with authoritative UK guidance.
- Reason. Information not submitted at application stage. The undertaking of intrusive site investigations, prior to the commencement of development, is considered to be necessary to ensure that adequate information pertaining to ground

conditions and coal mining legacy is available to enable appropriate remedial and mitigatory measures to be identified and carried out before building works commence on site. This is in order to ensure the safety and stability of the development, in accordance with paragraphs 187, 196 and 197 of the National Planning Policy Framework.

- 9 Prior to the occupation of the development, or it being taken into beneficial use, a signed statement or declaration prepared by a suitably competent person confirming that the site is, or has been made safe and stable for the approved development shall be submitted to the Local Planning Authority for approval in writing. This document should confirm the methods and findings of the intrusive site investigations and the completion of any remedial works and/or mitigation necessary to address the risks posed by past coal mining activity.
Reason. In order to ensure and verify the safety and stability of the development, in accordance with paragraphs 187, 196 and 197 of the National Planning Policy Framework.
- 10 No works to trees or shrubs shall occur between the 1st March and 31st August in any year unless a detailed bird nest survey by a suitably experienced ecologist has been carried out immediately prior to clearance.
Reason. In order to ensure that no harm is caused to a Protected Species pursuant to policies EN6/3 - Features of Ecological Value, JP-G8 - A Net Enhancement of Biodiversity and Geodiversity and National Planning Policy Framework Section 15 - Conserving and enhancing the natural environment.
- 11 The development hereby approved shall incorporate bat or bird boxes into the building which shall thereafter be maintained.
Reason. To enhance the ecological value of the site pursuant to policies EN6/3 - Features of Ecological Value, JP-G8 - A Net Enhancement of Biodiversity and Geodiversity and National Planning Policy Framework Section 15 - Conserving and enhancing the natural environment.
- 12 The external finishing materials for the proposal hereby approved shall be grey composite cladding.
Reason. In the interests of visual amenity and to ensure a satisfactory development pursuant to Policy EN1/2 - Townscape and Built Design of Bury Unitary Development Plan.
- 13 No development shall commence unless and until a 'Construction Traffic Management Plan' (CTMP), has been submitted to and agreed in writing with the Local Planning Authority and shall confirm/provide the following:
- Photographic dilapidation survey of the footways and carriageways leading to and abutting the site in the event that subsequent remedial works are required following construction of the development;
 - Access route for all construction vehicles to the site from the Key Route Network access point/arrangements for construction traffic;
 - If proposed, details of site hoarding/gate positions, incorporating the provision, where necessary, of temporary pedestrian facilities/protection measures;
 - A scheme of appropriate warning/construction traffic speed signage in the vicinity of the site and its access onto Darbyshire Street;
 - Confirmation of hours of operation, delivery & construction vehicle sizes that can be accommodated on/enter and leave the site in a forward gear and number of vehicle movements;
 - Arrangements for the turning and manoeuvring of vehicles within the curtilage of

- the site and/or measures to control/manage delivery vehicle manoeuvres;
- Parking on site or on land within the applicant's control of operatives' and construction vehicles, together with storage on site of construction materials;
- Measures to ensure that all mud and other loose materials are not spread onto the adjacent highways as a result of the groundworks operations or carried on the wheels and chassis of any vehicles leaving the site and measures to minimise dust nuisance caused by the operations.

The approved plan shall be adhered to throughout the construction period and the measures shall be retained and facilities used for the intended purpose for the duration of the construction period.

Reason. Information not submitted at application stage. To mitigate the impact of the construction traffic generated by the proposed development on the adjacent residential streets, and ensure adequate off street car parking provision and materials storage arrangements for the duration of the construction period and that the adopted highways are kept free of deposited material from the ground works operations, in the interests of highway safety pursuant to Bury Unitary Development Plan Policies EN1/2 - Townscape and Built Design and JP-C8 - Transport Requirements of New Development

- 14 The car parking and turning facilities indicated on the approved plans shall be surfaced, demarcated and made available for use to the written satisfaction of the Local Planning Authority prior to the development hereby approved being brought into use and thereafter maintained at all times.

Reason. To ensure adequate off street car parking provision in the interests of road safety pursuant to policy HT2/4 - Car Parking and New Development of the Bury Unitary Development Plan.

- 15 Adequate bin storage arrangements shall be made available for use prior to the development hereby approved being brought into use and thereafter maintained at all times.

Reason. To ensure adequate off-highway bin storage facilities are provided within the curtilage of the site in the interests of road safety pursuant to policies EN1/2 and JP-C8.

Statement in accordance with Article 35(2) Town and Country Planning (Development Management Procedure) (England) (Amendment) Order 2015

The Local Planning Authority worked positively and proactively with the applicant to identify various solutions during the application process to ensure that the proposal comprised sustainable development and would improve the economic, social and environmental conditions of the area and would accord with the development plan. These were incorporated into the scheme and/or have been secured by planning condition. The Local Planning Authority has therefore implemented the requirement in Paragraph 38 of the National Planning Policy Framework.

The following policies of the Bury Unitary Development Plan, National and Regional Government were considered relevant:

NPPF	National Planning Policy Framework
H5/1	H5/1 - Area Improvement
EC6/1	EC6/1 - New Business, Industrial and Commercial Development
HT2/4	HT2/4 - Car Parking and New Development
EN1/2	EN1/2 - Townscape and Built Design
EN7/2	EN7/2 - Noise Pollution
JP-S2	Carbon and Energy

JP-S4 Flood Risk and the Water Environment
JP-J1 Supporting Long-Term Economic Growth
JP-J4 Industry and Warehousing Development
JP-C2 Digital Connectivity
JP-C5 Streets For All
JP-C8 Transport Requirements of New Development
SPD11 Development Control Policy Guidance Note 11 - Parking Standards in Bury

This decision relates only to the Town and Country Planning Acts and does not include any consent or approval under any other enactment or under the Building Regulations. Any other consent or approval which is necessary must be obtained from the appropriate authority.

Applicant Plan Numbers:

Revised proposed location plan S(00) 01 rev A
Revised proposed existing site plan S(00) 02 rev B
Revised proposed site plan S(00) 03 rev B
Revised proposed unit plans L(00) 01 rev A
Proposed elevations L(00) 02
Proposed vehicular tracking S(00) 04
Existing and proposed Spring Lane elevations L(00) 03
Existing and proposed Darbyshire Street elevations L(00) 04

NOTES TO APPLICANT

- . In order to discharge conditions, the actions required by Conditions 3-6 shall be completed in accordance with the following guidance: Land Contamination Risk Management (Environment Agency, 2023).

The applicant is advised that they have a duty to adhere to the regulations of Part 2A of the Environmental Protection Act 1990, the National Planning Policy Framework 2024 and the Building Control Regulations with regards to contaminated land. The responsibility to ensure the safe development of land affected by contamination rests primarily with the developer.

Purchasers, where applicable, are advised that they should satisfy themselves that land contamination issues, if present, have been satisfactorily discharged given that the Council expects full compliance with any contaminated land requirements prior to the occupation of the site. Upon occupation such matters could then be the responsibility of the owner to remedy.
- . The recommendation within the Design and Access Statement for at least one active EV charging point and passive ducting for future bays is welcomed.
Reason: To encourage the uptake of ultra-low emission vehicles and ensure the development is sustainable and to safeguard residential amenity, public health and quality of life with respect to Local Air Quality, in accordance with paragraphs 112e, 117e, 187e and 199 of the National Planning Policy Framework (December 2024) and Places for Everyone Policy JP-S5 (Clean Air).
- . The site is to be drained on a separate system of drainage with surface water and foul sewage being combined at the last manhole before connection to public sewer
- . Surface water discharge to be limited to existing flow from site less a minimum 40% reduction in run-off to allow for climate change to prevent surcharge of public

sewerage system downstream of the proposed development Chapter 10 of the National Planning Policy Framework - Meeting the Challenge of Climate Change, Flooding and Coastal Change and Unitary Development Plan Policy EN5/1 - New Development and Flood Risk and its associated SPD 16 Design and Layout of New Development in Bury. Climate change allowance should be increased to 70% for sites which fall within Flood Zone 3

Application forms for permission to connect to the public sewer should be obtained by telephoning United Utilities PLC on 08456 020406 or online at www.unitedutilities.com

Applications for sewer requisitions should be obtained by telephoning United Utilities PLC at either Dawson House (01925 235871) or Hathersage Road (0161 609 7513)

The applicant should ensure that any proposed driveways/paved areas (in excess of 5m²) situated at the front of properties are constructed of permeable or porous materials. The applicant should refer to Dept. of Communities & Local Government publication "Guidance on the Permeable Surfacing of Front Gardens" for design & construction details.

United Utilities response

United Utilities provides the following comments to support the Local Planning Authority in their determination of the planning application detailed above, and to direct the applicant to further sources of support and guidance on matters that might impact their proposal.

The letter and Appendix should be read in their entirety to support the determination, the design, and should the scheme be approved, the subsequent delivery of the proposal.

DRAINAGE

Directed by the principles set out in the National Planning Practice Guidance and the new National Standards for Sustainable Drainage Systems (2025) we require developers and Local Planning Authorities, to do all that they can to avoid surface water entering the public sewer, unless absolutely necessary. This applies to all proposed development. See Appendix 1.1 'Surface Water Hierarchy'.

All options for the sustainable management of surface water must be thoroughly investigated before we will accept any surface water connections from new development to the public sewer. Where a new surface water connection to the public sewer is proposed, we will require robust evidence to demonstrate the drainage hierarchy has been fully investigated and there are no more sustainable options available for the management of surface water.

Noting this is a Full application, we request that the applicant provides a detailed drainage plan, and that United Utilities has the opportunity to review and comment on this plan PRIOR TO DETERMINATION of this application.

Should planning permission be granted without the provision of this information we request the following condition is attached to any subsequent Decision Notice:

CONDITION

Prior to the commencement of development, details of a sustainable surface water drainage scheme and a foul water drainage scheme shall be submitted to and approved in writing by the Local Planning Authority. The drainage schemes must include:

(i) An investigation of the hierarchy of drainage options in the National Standards for Sustainable Drainage Systems (or any subsequent amendment thereof). This investigation shall include evidence of an assessment of ground conditions and the

potential for infiltration of surface water;

(ii) A restricted rate of discharge of surface water agreed with the local planning authority (if it is agreed that infiltration is discounted by the investigations);

(iii) Levels of the proposed drainage systems including proposed ground and finished floor levels in AOD;

(iv) Incorporate mitigation measures to manage the risk of sewer surcharge where applicable; and

(v) Foul and surface water shall drain on separate systems.

The approved schemes shall be in accordance with the National Standards for Sustainable Drainage Systems (2025) or any subsequent replacement national standards.

Prior to occupation of the proposed development, the drainage schemes shall be completed in accordance with the approved details and retained thereafter for the lifetime of the development.

Reason: To promote sustainable development, secure proper drainage and to manage the risk of flooding and pollution.

To discuss their drainage proposals the applicant should contact our Developer Services team by email at SewerAdoptions@uuplc.co.uk. Alternative ways to contact the team are detailed in the Appendix, Section 6.0 'Contacts'.

Please note, United Utilities is not responsible for advising on rates of discharge to the local watercourse system. This is a matter for discussion with the Lead Local Flood Authority and / or the Environment Agency (if the watercourse is classified as a main river).

Management and maintenance of Sustainable Drainage Systems (SuDS)

Without effective management and maintenance SuDS can fail or become ineffective which may have a detrimental impact on the surrounding area, including the performance of the public sewer network (where the two systems interact).

Therefore, where SuDS is included in a proposed development, we recommend the Local Authority include a condition relating to SuDS management and maintenance in any subsequent Decision Notice. An example condition is included with the Appendix, Section 2.2.

When considering their drainage proposal, it is the applicant's responsibility to investigate the existence of any infrastructure that might impact their detailed design. This includes water wastewater, operational and/or abandoned pipelines. United Utilities will not routinely carry out this assessment when reviewing drainage proposals submitted within a planning application. Where infrastructure exists, the drainage design must comply with the relevant United Utilities guidelines and/or Building Regulations. Further information is available on our website: [Working near our pipes - United Utilities](#). Failure to consider existing infrastructure when designing a drainage proposal may result in the applicant having to redesign proposals at a later date.

UNITED UTILITIES' PROPERTY, ASSETS AND INFRASTRUCTURE

It is the applicant's responsibility to investigate the existence of any pipelines that might cross or impact their proposed site and also to demonstrate the exact relationship between United Utilities' assets and the proposed development. The applicant should not rely solely on the detail contained within asset maps when considering a proposed layout.

It is important that the supporting information contained in the Appendix, Section 3.0 'United Utilities' Property, Assets and Infrastructure', is read in conjunction with this letter. This provides information that might impact a proposed layout and additional guidance that an applicant or developer must consider when United Utilities assets are located in, or in the locality of, the proposed site.

Where United Utilities' assets exist, it is essential that the applicant, or any

subsequent developer, contacts our Developer Services team prior to commencing any works on site, including trial holes, groundworks or demolition. See Appendix, Section 6.0 'Contacts'.

WATER EFFICIENCY IN NEW DEVELOPMENT

All new homes are required to meet the mandatory national standard of 125 litres of water used per person per day (l/p/d) as set out in Building Regulations Approved Document G. If your adopted development plan includes a policy that implements the tighter water efficiency standard of 110 l/p/d for new-build dwellings in Part 3 of Building Regulations, you should ensure that this is a condition of any planning permission you may grant. You should also consider whether there is any adopted development plan policy relating to water efficiency in the construction of non-residential development. As this is a matter for the local planning authority / building control body, United Utilities would not be involved in the discharge of conditions relating to water efficiency.

United Utilities response

APPENDIX:

Supporting information for the decision maker, applicant, developers and any other interested party

Whilst we provide the following information to support the design and delivery of the proposed scheme, we strongly recommend that the applicant, or any subsequent developer, contacts our Developer Services team or visits our website for more detailed advice on any aspects of United Utilities' assets and services that might impact their proposal. Full contact details can be found in Section 6.0 'Contacts' (below).

1.0

DRAINAGE DESIGN

Surface water (rainwater) flows are very large when compared with foul water flows that come from toilets, showers, washing machines, etc. It is usually surface water flows that increase the risk of sewer flooding, potentially impacting homes and businesses, and can result in unwanted spills from storm overflows into watercourses.

We have embarked on an ambitious investment programme to improve the performance of our wastewater network, particularly relating to the management of surface water. Our focus is to reduce the risk of sewer flooding and the prevention, frequency and intensity of spills from storm overflows, ultimately moving to a position where they are no longer necessary. As we work hard to improve the existing wastewater network, it is important that we do not compromise the results by accepting any unnecessary new surface water connections and that we take all opportunities for the removal of existing flows.

1.1 Surface water hierarchy

The design and delivery of surface water drainage systems must be in accordance with the National Standards for Sustainable Drainage Systems or any replacement of national standards. Full details, including the hierarchy of surface water runoff destinations can be found here: National standards for sustainable drainage systems (SuDS) - GOV.UK

The standards indicate that surface water drainage systems shall be designed, constructed, maintained and operated following a natural approach to managing water. This should mimic natural drainage, manage surface runoff at or close to the surface and as close to its source as practicable. Therefore, drainage proposals for new development must be designed to maximise the retention of surface water on-site and minimise the volume and rate of surface water discharge off-site.

United Utilities will only accept new surface water connections to the public sewer in circumstances where the applicant has provided robust evidence that the drainage

hierarchy has been fully investigated and more sustainable options for the management of surface water have been proven to be unfeasible. Surface water connections, particularly to the combined sewer, should only be considered as the last resort.

Where surface water connections already exist, the applicant must provide clear evidence of these connections along with calculations on rates of discharge, to demonstrate a reduction in discharge rates. Without this evidence, applicants will be required to discharge at a greenfield rate of run-off.

1.2 Adoption and construction of drainage systems

If the applicant intends to offer wastewater assets forward for adoption by United Utilities, their proposed detailed design will be subject to a technical appraisal by our Developer Services team and must meet the requirements outlined in 'Sewerage Sector Guidance Appendix C – Design and Construction Guidance v2-2' dated 29 June 2022 or any subsequent iteration. This is important as drainage design can be a key determining factor of site levels and layout.

If the proposal incorporates a SuDS component(s) which interacts with a sewer network that may be offered for adoption by United Utilities, we recommend the applicant seeks further advice regarding the SuDS design; detailed information is available on our website.

Our acceptance of any drainage strategy submitted by an applicant to the Local Planning Authority for approval does not infer that a detailed drainage design will meet the requirements for a successful adoption application. We strongly recommend that no construction commences until the detailed drainage design has been submitted directly to United Utilities, assessed and accepted in writing. Any work carried out prior to the technical assessment being approved is done entirely at the developer's own risk and could be subject to change.

2.0 PLANNING CONDITIONS; OUR APPROACH TO DRAINAGE CONDITIONS

When appropriate, United Utilities will request planning conditions relating to site drainage. This is important to ensure the delivery of quality drainage design for both new and existing customers. There is also a particular focus on the sustainable management of surface water thorough investigation of the drainage hierarchy which is critical in the management of flood risk and to reduce the frequency and intensity of spills from storm overflows, which is a shared priority for both United Utilities and the customers and communities that we serve.

2.1 Drainage design

In scenarios where all relevant information regarding drainage design is available; the design is acceptable and all opportunities for the sustainable management of surface water have been fully investigated, we will usually request a compliance condition to enable the delivery of the proposed design. If any relevant information is missing, or where there is insufficient evidence to demonstrate that the drainage hierarchy has been fully investigated, we will request a pre-commencement condition to ensure that all aspects of drainage design are fully considered before any work begins on site.

2.2 Management and maintenance of Sustainable Drainage Systems (SuDS)

The Local Authority should consider a SuDS management and maintenance condition for any scheme where SuDS is included within the proposal. An example condition is below that may be suitable in many circumstances.

Prior to occupation of the development a sustainable drainage management and maintenance plan for the lifetime of the development shall be submitted to the local planning authority and agreed in writing. The sustainable drainage management and maintenance plan shall include as a minimum:

(i)

Arrangements for adoption by an appropriate public body or statutory undertaker, or, management and maintenance by a resident's management company; and

(ii)

Arrangements for inspection and ongoing maintenance of all elements of the sustainable drainage system to secure the operation of the surface water drainage

scheme throughout its lifetime.

The development shall subsequently be completed, maintained and managed in accordance with the approved plan.

Reason: To ensure that management arrangements are in place for the sustainable drainage system in order to manage the risk of flooding and pollution during the lifetime of the development.

It is important to note that United Utilities cannot provide comment on an asset that is owned by a third-party management and maintenance company and therefore, would not be involved in any application to discharge a condition relating to SuDS management and maintenance.

3.0 UNITED UTILITIES' PROPERTY, ASSETS AND INFRASTRUCTURE

3.1 Water pipelines

United Utilities will not allow building over or in close proximity to a water main.

For any works in the vicinity of water pipelines, including drainage, the applicant must comply with our 'Standard Conditions for Works Adjacent to Pipelines', which can be found on our website: Working near our pipes - United Utilities

3.2 Wastewater pipelines

United Utilities will not allow any new buildings or structures to be erected over or in close proximity to a public sewer or any other wastewater pipeline. This will only be reviewed in exceptional circumstances.

Nb. Proposals to extend domestic properties either above, or in close proximity to a public sewer will be reviewed on a case by case basis by either by a building control professional or following a direct application to United Utilities (see our website for further details).

3.3 Water and wastewater pipelines and apparatus

A number of providers offer a paid for mapping service, including United Utilities.

Alternatively, the plans can be viewed for free. See Section 6.0 'Contacts' for further details.

The position of underground apparatus shown on water and wastewater asset maps is approximate only and is given in accordance with the best information currently available. The actual positions may be different from those shown on the plans and private pipes, sewers or drains may not be recorded. We strongly recommend the applicant, or any future developer, does not rely solely on the asset maps to inform decisions relating to the detail of their site and instead investigates the precise location of any underground pipelines and apparatus.

Where additional information is requested to enable an assessment of the proximity of proposed development features to United Utilities assets, the proven location of pipelines should be confirmed by site survey; an extract of asset maps will not suffice. The applicant should seek advice from our Developer Services team on this matter. See Section 6.0. 'Contacts' (below). United Utilities Water PLC will not accept liability for any loss or damage caused by the actual position of our assets and infrastructure being different from those shown on asset maps.

Developers should investigate the existence and the precise location of water and wastewater pipelines as soon as possible as this could significantly impact the preferred site layout and/or diversion of the asset(s) may be required. Unless there is specific provision within the title of the property or an associated easement, any necessary disconnection or diversion of assets to accommodate development, will be at the applicant/developer's expense. In some circumstances, usually related to the size and nature of the assets impacted by proposals, developers may discover the cost of diversion is prohibitive in the context of their development scheme.

Any agreement to divert our underground assets will be subject to a diversion application, made directly to United Utilities. This is a separate matter to the determination of a planning application. We will not guarantee, or infer acceptance of, a proposed diversion through the planning process (where diversion is indicated on submitted plans). In the event that an application to divert or abandon underground assets is submitted to United Utilities and subsequently rejected (either before or

after the determination of a planning application), applicants should be aware that they may need to amend their proposed layout to accommodate United Utilities' assets.

Where United Utilities' assets exist, the level of cover to United Utilities pipelines and apparatus must not be compromised either during or after construction and there should be no additional load bearing capacity on pipelines without prior agreement from United Utilities. This would include sustainable drainage features, earth movement and the transport and position of construction equipment and vehicles. Any construction activities in the vicinity of United Utilities' assets, including any assets or infrastructure that may be located outside the applicant's red line boundary, must comply with national building and construction standards and where applicable, our 'Standard Conditions for Works Adjacent to Pipelines', which can be found on our website: Working near our pipes - United Utilities.

The applicant, and/or any subsequent developer should note that our 'Standard Conditions' guidance applies to any design and construction activities in close proximity to pipelines and apparatus that are no longer in service, as well as pipelines and apparatus that are currently in operation. This advice is also relevant to any uncharted pipelines (pipelines that do not appear on our asset maps) that might be discovered on site either before or during construction. In this instance, the developer should contact our Developer Services team as soon as possible. See Section 6.0 'Contacts'.

It is the applicant's responsibility to ensure that United Utilities' required access is provided within any proposed layout and that our infrastructure is appropriately protected. The developer would be liable for the cost of any damage to United Utilities' assets resulting from their activity.

4.0 WATER AND WASTEWATER SERVICES, METERING AND CHARGES

If the applicant intends to receive water and/or wastewater services from United Utilities they should visit our website or contact the Developer Services team for advice at the earliest opportunity. This includes seeking confirmation of the required metering arrangements for the proposed development. See Section 6.0 'Contacts' (below).

If the proposed development site benefits from existing water and wastewater connections, the applicant should not assume that the connection(s) will be suitable for the new proposal or that any existing metering arrangements will suffice. In addition, if reinforcement of the water network is required to meet potential demand, this could be a significant project and the design and construction period should be accounted for.

In some circumstances a water meter must be installed to premises. Detailed guidance on whether the development will require a compulsory meter is available on our website within our published Charges Schemes; Our household charges 2025/2026 | United Utilities (Section 8.7).

To avoid any unnecessary costs and delays being incurred by the applicant or any subsequent developer, we strongly recommend the applicant seeks advice regarding water and wastewater services and metering arrangements, at the earliest opportunity. See Section 6.0 'Contacts'.

To promote sustainable development United Utilities offers a reduction in infrastructure charges to applicant's delivering water efficient homes and draining surface water sustainably (criteria applies). Further information can be found on our website: Sustainability - United Utilities

Business customers can find additional information on our sustainable drainage incentive scheme at Incentive schemes | United Utilities

5.0 GROUNDWATER PROTECTION ZONES

Groundwater Protection Zones (GPZs), also known as Source Protection Zones (SPZs), identify the groundwater catchment areas of sources of potable water and show where they may be at particular risk from polluting activities on or below the land surface.

The Environment Agency has a series of published position statements documenting their approach to managing and protecting groundwater; The Environment Agency's approach to groundwater protection. This document includes position statements, including restrictions or extra controls, that are applicable to certain activities within a Source Protection Zone 1 (SPZ1)

of a groundwater source, which are designed to protect groundwater intended for human consumption. It is important that the applicant reviews the Environment Agency's advice, or any subsequent guidance, in its entirety.

Nb. In order to protect groundwater quality surrounding United Utilities boreholes, we may request the principles outlined within the Environment Agency's document are applied to Source Protection Zone 2 (SPZ2), as well as SPZ1.

The applicant can seek further advice from our Groundwater Engineering Team. See 'Contacts' Section below.

6.0 CONTACTS

Contact our DEVELOPER SERVICES team as follows:

Website (including 'Live Chat'): Building & Developing - United Utilities

Telephone (Monday-Friday, 8am-6pm): 0345 072 6067

Email:

WATER (water mains, supply and metering): DeveloperServicesWater@uuplc.co.uk

WASTEWATER (public sewers and drainage): SewerAdoptions@uuplc.co.uk

SLUDGE PIPELINES: DeveloperServicesWater@uuplc.co.uk

GROUNDWATER PROTECTION ZONES:

Where the proposed site is located in a Groundwater Source Protection Zone, the applicant should contact our Engineering team for advice, by email at

Groundwater@uuplc.co.uk

PROPERTY SEARCHES (FOR ASSET MAPS):

The public water and sewer records can be viewed via our online viewing facility for free. Viewings are by appointment only. To book an appointment, the applicant should email propertysearches@uuplc.co.uk or call 0370 751 0101

Alternatively, a number of providers offer a paid for mapping service, including United Utilities. To purchase a sewer and water plan from United Utilities, visit Property Searches | United Utilities

UNITED UTILITIES LEGAL SERVICES (FOR EASEMENT DOCUMENTS):

Copies of relevant deeds may be purchased from United Utilities Legal Services. This information is also available from Land Registry.

To purchase a copy of easement documents from United Utilities, please email:

LegalServices@uuplc.co.uk

Coal Authority informatives

1 - Ground Investigations and groundworks

Under the Coal Industry Act 1994 any intrusive activities which disturb or enter any coal seams, coal mine workings or coal mine entries (shafts and adits) require the prior written permission of the Mining Remediation Authority since these activities can have serious public health and safety implications. Such activities could include site investigation boreholes, piling activities, other ground works and any subsequent treatment of coal mine workings and coal mine entries for ground stability purposes. Failure to obtain permission to enter or disturb our property will result in the potential for court action. Application forms for Mining Remediation Authority permission and further guidance can be obtained from:

www.gov.uk/get-a-permit-to-deal-with-a-coal-mine-on-your-property .

2 - Requirement for Incidental Coal Agreements

If any future development has the potential to encounter coal seams which require excavating, for example excavation of building foundations, service trenches, development platforms, earthworks, non-coal mineral operations, an Incidental Coal

Agreement will be required from the Mining Remediation Authority. Further information regarding Incidental Coal Agreements can be found at: www.gov.uk/government/publications/incidental-coal-agreement/guidance-notes-for-applicants-for-incidental-coal-agreements.

3 - Shallow coal seams

In areas where shallow coal seams are present caution should be taken when carrying out any on site burning or heat focused activities.

The applicant is reminded of their responsibilities under the Wildlife & Countryside Act 1981, as amended, that no harm is caused to a Protected Species. Should Protected Species be found then works should stop immediately and Natural England and a professional ecologist consulted.

In accordance with S93G of the Town and Country Planning Act 1990 (As amended by Section 111 Levelling Up & Regeneration Act 2023) there is a legal requirement for you to inform the Council of the date when you intend to commence the development on site via submission of a Commencement Notice. This notice is mandatory for all developments and came into effect on 31 March 2024. You can find more information and download a copy of the Commencement Notice under the Before Starting Work section on our website at <https://www.bury.gov.uk/planning-building-control/planning-permission/planning-application-process>
