

# Preliminary Roost Assessment

**23 Ringley Road**

Whitefield, Manchester

December 2021

Prepared for: JPL Design and Construct Ltd.

Report prepared by: Verity Webster BSc (Hons) MSc CEcol CMIEEM

## Executive Summary

### Bats

- On 8th December 2021 a Preliminary Roost Assessment (bats) was undertaken at 23 Ringley Road, Whitefield, Manchester.
- The garage is considered to have negligible suitability for bats, whilst the house is considered to have low suitability for roosting bats due to the presence of crevices beneath the tiles and the potential for bats to roost between the tiles and the lining. The interior space is not considered likely to be used by bats.
- As the proposed works will impact the roof, further survey work is recommended as a precaution to determine the presence or absence of a bat roost. This survey work must be undertaken between May - August.
- If a bat roost is confirmed present, it will be necessary to obtain a European Protected Species Mitigation (EPSM) licence for bats from Natural England prior to the start of works on site. The licence would detail the mitigation required to ensure the retention of the conservation status of the bat species present.
- It is considered that the proposals to extend the property provide scope to effectively mitigate for the presence of a bat roost.

## **1 Introduction**

### **1.1 Application Site**

- 1.1.1. This report details bat and bird survey work at 23 Ringley Road, Whitefield, Manchester, M45 7LD. National grid reference SD79950574.
- 1.1.2. JPL Design and Construct Ltd commissioned Verity Webster Ltd to undertake the bat survey work to inform the planning application.

### **1.2 Objectives**

- 1.2.1 The objectives of the Preliminary Roost Assessment and Bird Assessment are to determine:
- The suitability of the building on site to support a bat roost or nesting birds.
  - Whether bats or birds are currently using the buildings, or have done in the past.
  - The potential status of any roost present.
  - How bats might be using the site and the potential species present.
  - The potential impacts of the proposals on any potential roost present or on bats using the site.
  - The potential impacts of the proposals on any birds using the site.
  - The requirement for further survey work and/or mitigation.
  - How any impacts might be avoided, mitigated and/or ameliorated, including advice on European Protected Species Mitigation (EPSM) application (bats) if required.
- 1.2.2 The format and content of this report follow that required by the European Protected Species Mitigation (EPSM) licence application where appropriate.

### **1.3 Proposals**

- 1.3.1 The proposals for the site comprise the demolition of the existing property and construction of a new dwelling.

### **1.4 Ecologist**

- 1.4.1 The Preliminary Roost Assessment was undertaken by Verity Webster. Verity is a licensed bat surveyor (Bat Survey Class Licence WML CL18 (Class 2) Registration number: 2015-13858-CLS-CLS).
- 1.4.2 Verity has worked as an ecological consultant for over 14 years. She has undertaken preliminary bat assessments and further bat emergence / activity surveys for a large variety of projects and schemes, producing the required impact assessment and subsequent mitigation schemes / method statements when necessary.

## **2 The Survey Site**

### **2.1 Site Location**

- 2.1.1 The survey site lies in a residential area on the western outskirts of Whitefield.
- 2.1.2 The landscape immediately surrounding the property is built-up residential, although it is still 'green' given the large gardens and mature trees.
- 2.1.3 Stand Golf Club lies approximately 100m northwest of the survey site beyond Ringley Road and a row of houses. Whitefield Golf Course lies approximately 300m to the south beyond residential housing.
- 2.1.4 Open countryside extends south from Whitefield Golf Course and lies approximately 750m to the west at the closest point. The countryside comprises a matrix of grassland and woodland with small areas of arable land.
- 2.1.5 There are scattered waterbodies throughout the open landscape. In addition the River Irwell weaves southwest to northeast approximately 900m to the north. A railway line, providing a linear habitat corridor, runs northwest to south approximately 600m to the northeast of the site.

## 2.2 The Survey Site: Description

- 2.2.1 The survey site lies to the southeast of Ringley Road and comprises a bungalow and garage set within mature gardens.

### The House

- 2.2.2 The house is a brick bungalow, partly rendered, with a hipped, tiled roof. The roof is lined beneath with felt. There is a hipped extension to the rear and dormer windows to the front.

- 2.2.3 The loft void is large, approximately 5m to the apex and was accessible at the time of survey.

### The garage

- 2.2.4 The garage is constructed of brick with a hipped, tiled roof. The garage is situated to the southwest of the house.

- 2.2.5 The rear garden comprises amenity grassland bounded by mature shrubs. There are mature beech trees in the front garden adjacent to Ringley Road.

*The northwest (front) elevation of the house*

*The southeast (rear) elevation of the house*

*The northeast and southeast elevation of the garage*

### 3 Legislation

Full details of relevant legislation and planning policy can be found in Appendix A.

#### 3.1 UK and EU Legislation

##### Bats

##### 3.1.1 Key legislation regarding the protection of bats and birds:

- Wildlife and Countryside Act 1981 (as amended)
- The Countryside and Rights of Way Act (CROW), 2000
- The Natural Environment and Rural Communities Act (NERC, 2006)
- Conservation of Habitats and Species Regulations (2017)

##### 3.1.2 Under the Wildlife and Countryside Act 1981 (as amended) and the Conservation of Habitats and Species Regulations 2017, it is a criminal offence to:

- Deliberately capture, injure or kill a bat
- Intentionally or recklessly disturb a bat in its roost or deliberately disturb a group of bats
- Damage or destroy a bat roosting place (even if bats are not occupying the roost at the time)
- Possess or advertise/sell/exchange a bat (dead or alive) or any part of a bat
- Intentionally or recklessly obstruct access to a bat roost.

#### 3.2 Planning Policy and Legislation

##### 3.2.1 Under the NERC Act 2006, planning authorities are obliged to make sure that they have all the information on the presence of protected species on site before they make a decision on the planning permission.

##### 3.2.2 The National Planning Policy Framework (NPPF) encourages Local Planning Authorities to conserve and enhance biodiversity.

##### 3.2.3 Under the NERC Act 2006, planning authorities are obliged to make sure that they have all the information on the presence of protected species on site before they make a decision on the planning permission.

##### 3.2.4 The National Planning Policy Framework (NPPF) encourages Local Planning Authorities to conserve and enhance biodiversity.

Chapter 15, Para 170 of NPPF states: *"The planning system should contribute to and enhance the natural and local environment by:*

- a) ***protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils....***
- d) ***minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures"***.

Para 171 states: *"Plans should: distinguish between the hierarchy of international, national and locally designated sites; allocate land with the least environmental or amenity value, where consistent with other policies in this Framework; take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure; and plan for the enhancement of natural capital at a catchment or landscape scale across local authority boundaries."*

Para 174 identifies that plans should do the following to protect and enhance biodiversity and geodiversity:

- a) ***"Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for***

*biodiversity; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation; and*

- b) Promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and peruse opportunities for securing measurable net gains for biodiversity.”**

3.2.5 Para 175 states that “when determining planning applications, local authorities should apply the following principles:

- a) if significant harm to biodiversity from a development cannot be avoided...,adequately mitigated, or, as a last resort compensated for, then planning permission should be refused”**

3.2.6 The local planning authority has a responsibility, therefore, to obtain all information regarding the potential for protected species on a site prior to making a decision about a proposal.

## 4 Survey Methodology

4.0.1 The Bat Survey (Preliminary Roost Assessment) was undertaken in accordance with current accepted guidance: Collins, J. (ed.) (2016) Bat Surveys for Professional Ecologists: Good Practice Guidelines (3rd Edn). The Bat Conservation Trust, London.

### 4.1 Desk Study

4.1.1 Data sources used to establish background information about bats and their likely presence in the locality:

- Magic Map, Natural England (2016)
- Bing Maps (2017)

4.1.2 Satellite mapping, Ordnance survey, road map, habitat and designated site data from Magic Map (Natural England, 2014) was used to assess the value of the surrounding habitat for bats in the area at a landscape scale (5km), including any potentially important habitat corridors (linear habitat features), feeding grounds or potential roost opportunities, such as large expanses of woodland. The features and habitats immediately surrounding the site (local area) were also assessed at a finer scale as these influence the likely presence of bats within the survey site.

### 4.2 Preliminary Roost Assessment

4.2.1 An internal and external inspection of the filter house was undertaken during daylight on 8<sup>th</sup> December 2021 to determine the suitability for bats and establish, if possible, whether bats are using the structures or have been using the structures in the past.

4.2.2 All accessible parts of the structure were inspected to look for bats and signs of the presence of bats, including:

- Droppings.
- Feeding remains including moth and butterfly wings.
- Staining from urine or oils near crevices or holes or on timber (such as roof beams), walls, chimney breasts etc.
- Scratch marks on walls and timber.
- Squeaking or chattering calls.

- 4.2.3 The systematic search inside the building included inspection of beams, floors, surfaces of stored materials, loose roof insulation or felt covering, junctions between roof timbers and timbers and the walls, crevices within brickwork. Potential access into the building was also inspected by searching for holes in insulation and any light penetration into the interior from the outside.
- 4.2.4 The assessment outside the building included inspection of all walls, windows, window sills, fascias, soffits, eaves and tiles, including a search for any crevices under tiles, under lifted lead flashing or lifted roofing felt, missing mortar, gaps in the ridge or gable end of the roofs, crevices in brickwork or under flaking paintwork or render, gaps in cladding or hanging tiles and any other potential bat roost opportunities.
- 4.2.5 Equipment: During the survey a strong torch with directional beam was used to inspect the buildings.
- 4.2.6 As a result of the preliminary roost assessment, the structure on site was characterised as having 'negligible', 'low', 'medium' or 'high' suitability for bats. It may also be possible to confirm presence of a roost.
- 4.2.7 Buildings or structures typically characterised as having:
- **Negligible** suitability for bats will lack features with any potential to support roosting bats. Modern or newly-built well-sealed structures may fall into this category. Structures that are metal clad with metal internal beams might have negligible potential if there are no favourable roosting spaces. Structures may also be unfavourable due to the level of disrepair, being subject to poor weather conditions.
  - **Low** suitability for bats will have sub-optimal roost features with limited potential for roosting bats. Features may be used by single bats opportunistically, but do not provide enough space, shelter, protection, appropriate conditions and / or suitable surrounding habitat to be used on a regular basis by large numbers of bats.
  - **Medium** suitability for bats may have few features with potential for bats, that provide enough space, shelter, protection and other suitable conditions, or several features with limited potential for bats. It may also be that a potentially suitable structure is situated in an area with habitat that has only low potential for foraging and commuting bats.
  - **High** suitability for bats will support at least one or more features that provide opportunities for roosting bats such that they might be used regularly, for longer periods by larger numbers of bats. These may be external features, such as lifted weatherboard or crevices in brick or stonework, or internal, such as large loft spaces with potential access. Barns, with open doorways and windows with wooden rafters and beams may fall into this category. If a structure is close to good habitat, such as a waterway, marshland or woodland, this also increases potential for roosting bats.
  - **Confirmed** roost presence when it is evident as a result of signs from inspection, such as droppings, or sight of bats, that a roost exists within the building. It is not always possible to ascertain presence or absence of a roost even if some signs, such as droppings or feeding remains are found.

### 4.3 Limitations

- 4.3.1 The survey was undertaken in daylight in early December. At this time of year bats will be hibernating and are unlikely to be present in the house, which, owing to the warm and dry conditions in the loft, is unsuitable for hibernation.
- 4.3.2 Evidence of bats on the exterior of a building is unlikely to be present as it may be washed away by the weather. However, evidence of use of the interior of a building by bats is likely to be present. where signs (such as droppings and feeding remains) are protected from the elements.
- 4.3.3 Biological records data was not obtained to inform this assessment, and was considered unnecessary at this stage of survey.
- 4.3.4 The survey work undertaken is considered sufficient to inform the requirements of further survey work or mitigation.

## 5 Findings: Preliminary Roost Assessment (Bats)

### 5.0 Potential for bats

- 5.0.1 At a landscape level, the area surrounding the survey site is very good for bats. Refer to Figure 2.
- 5.0.2 The immediate surroundings are 'green' despite the built-up residential nature of the area and there is a matrix of gardens, whilst many mature trees line the roads. The golf courses lie within close proximity and encompass grassland, woodland, waterbodies and scrub, habitat which is favourable to foraging bats. The wider countryside is also favourable for bats encompassing a matrix of grassland, arable land woodland, waterbodies and waterways. The habitat will support a variety of bat species including widespread species such as common and soprano pipistrelle bat (*Pipistrellus pipistrellus* and *Pipistrellus pygmaeus* respectively). Species that favour wooded habitat, such as brown long-eared bat (*Plecotus auritus*), Natterer's bat (*Myotis nattereri*), whiskered bat (*Myotis mystacinus*) and Brandt's bat (*Myotis brandtii*) are also likely to be present. Species that favour open habitats such as Leisler's (*Nyctalus leisleri*) and noctule bat (*Nyctalus noctula*) would also be expected.
- 5.0.3 The linear features (rivers and the railway) provide good habitat links that are likely utilised by commuting bats and will facilitate the movement of bats through the landscape.

### *The Conservation Status of Bats in the Area*

- 5.0.4 The conservation status of bats in the area is shown in Table 1.

**Table 1:** The Conservation Status of Bats in the area at a Local, County and Regional Level

| <b>Species</b>                 | <b>Local</b>                                                                                                           | <b>County</b>                                                                                                    | <b>Regional</b>                                                        |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| <i>Common pipistrelle</i>      | <i>Likely to be common in the area. There are records of this species in the area (10km).</i>                          | <i>Common and widespread Frequently recorded.</i>                                                                | <i>Common and widespread Frequently recorded across the Northwest</i>  |
| <i>Soprano pipistrelle</i>     | <i>Likely to be present due to the presence of riparian habitat.</i>                                                   | <i>Widespread. Frequently recorded.</i>                                                                          | <i>Common and widespread Frequently recorded across the Northwest</i>  |
| <i>Nathusius's pipistrelle</i> | <i>Likely to be rare in the area.</i>                                                                                  | <i>Infrequently recorded, but this may be due to low survey effort. Not yet recorded breeding in the county.</i> | <i>Rare across the northwest. A migratory species.</i>                 |
| <i>Brown long-eared bat</i>    | <i>Likely to be in the area. There is a recent record of this species within 10km of the site.</i>                     | <i>Common and widespread Frequently recorded.</i>                                                                | <i>Common and widespread Frequently recorded across the Northwest.</i> |
| <i>Natterer's bat</i>          | <i>Likely to be in the area, although this species favours woodland habitat, which is infrequent in the landscape.</i> | <i>Scattered distribution in Greater Manchester.</i>                                                             | <i>Widespread and scattered across the Northwest.</i>                  |
| <i>Noctule</i>                 | <i>Present</i>                                                                                                         | <i>Widespread and</i>                                                                                            | <i>Common and</i>                                                      |

|                       |                                                                                                                               |                                                    |                                                                                     |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|-------------------------------------------------------------------------------------|
|                       |                                                                                                                               | <i>frequently recorded.</i>                        | <i>widespread. Frequently recorded in the Northwest.</i>                            |
| <i>Whiskered bat</i>  | <i>Present but likely rare</i>                                                                                                | <i>Present</i>                                     | <i>Widespread.</i>                                                                  |
| <i>Brandt's bat</i>   | <i>Rare / absent</i>                                                                                                          | <i>Present</i>                                     | <i>Widespread.</i>                                                                  |
| <i>Alcathoe's bat</i> | <i>Unknown</i>                                                                                                                | <i>Unknown</i>                                     | <i>Widespread. Likely under-recorded.</i>                                           |
| <i>Daubenton's</i>    | <i>Presence is likely due to the riparian habitat present.</i>                                                                | <i>Widespread, frequently recorded near water.</i> | <i>Widespread</i>                                                                   |
| <i>Serotine</i>       | <i>Rare / absent</i>                                                                                                          | <i>Unknown</i>                                     | <i>Restricted to south and southwest Britain, rarely recorded in the northwest.</i> |
| <i>Leislars</i>       | <i>Rare</i>                                                                                                                   | <i>Unknown</i>                                     | <i>Rare, but widespread in Britain. Present in the northwest.</i>                   |
| <i>Barbastelle</i>    | <i>Unlikely to be present in the area. This species is a woodland-specialist and there is a lack of this habitat present.</i> | <i>Unknown</i>                                     | <i>Present south of a line from North Wales to the Wash.</i>                        |

### Preliminary Roost Assessment

5.0.5 The building inspection and bat roost assessment was undertaken in daylight on 8<sup>th</sup> December 2021.

#### *The House*

5.0.6 **The house is considered to have low suitability for roosting bats.**

5.0.7 Externally, the structure has some potential to support roosting bats. There are a small number of crevices and gaps beneath tiles that have shifted or slipped on the main body of the house, especially lower on the hipped angles of the roof. These crevices may provide suitable roost opportunities for crevice-roosting bats such as pipistrelle species. There is also a gap beneath the soffit on the southwest elevation, which may provide access for bats into the void.

5.0.8 The interior loft void is of a size that would be favoured by bats, such as brown long-eared bat (*Plecotus auritus*) and natterer's bat (*Myotis nattereri*) in which to fly prior to leaving a roost. However, no evidence of bats (droppings or feeding remains) was found during the internal inspection.

5.0.9 For this reason, it is considered very unlikely that the interior void is utilised by bats. However, the risk of bats utilising crevices external in the roof structure cannot be ruled out.

5.0.10 In order to determine the presence/absence of a roost in the roof structure, is recommended that further survey work is undertaken in the spring/summer months.

### *The Garage*

- 5.0.11 **The garage is considered to have negligible suitability for roosting bats.**
- 5.0.12 The garage roof is quite tightly fitted and there are no evident gaps where bats may gain entry between the tiles and the lining. Internally no evidence of bats was found. For this reason, the likelihood of a bat roost in this structure is considered to be negligible.

*Showing slipped tiles on the northwest elevation*

*Showing lifted tiles on the northwest elevation*

*Showing lifted tiles on the northwest elevation*

*Showing the gap under the soffit on the southwest elevation*

*Showing the large loft void*

## **6 Assessment**

### **6.0 Bats**

- 6.0.1 Following the inspection of the house and garage, the house is considered to have low suitability for roosting bats, given the small number of crevices present within the roof structure and the good quality of the surrounding habitat, whilst the garage is considered to have negligible suitability for bats due to the lack of visible potential roost sites.
- 6.0.2 The lack of droppings found in the loft void of the house suggests that this internal space is unlikely to be used by bats.
- 6.0.3 Further survey work will allow determination of the presence/absence of a bat roost within the roof structure.
- 6.0.4 If a bat roost is confirmed present, depending upon the location of the roost it may be necessary to obtain a European Protected Species Mitigation (EPSM) licence for bats prior to the start of works on site.
- 6.0.5 It is considered that the proposals provide adequate opportunity to mitigate for a crevice bat roost (which is most likely), should one be found.

## 7 Conclusion and Recommendations

### 7.0 Bats

- 7.0.1 The house provides potential opportunities for roosting bats. In order to determine the presence or absence of a roost it will be necessary to undertake further survey work at a time of year when bats are active.
- A single evening or dawn survey should be undertaken between May – August.
- 7.0.2 The survey work will inform any necessary mitigation.
- 7.0.3 If a bat roost is confirmed present, prior to the start of works to the filter house it will be necessary to apply for and attain a European Protected Species Mitigation (EPSM) licence.
- 7.0.4 An EPSM licence (issued by Natural England) would detail the necessary mitigation and procedures of work required to ensure that no bats are harmed during the works and that the conservation status of the species is retained following the works.

## **APPENDIX A: Wildlife Legislation and Planning Policy**

### **UK AND EU LEGISLATION**

#### **1.1. KEY LEGISLATION**

1.1.1. Key legislation regarding the protection of bats:

- Wildlife and Countryside Act 1981 (as amended)
- The Countryside and Rights of Way Act (CROW), 2000
- The Natural Environment and Rural Communities Act (NERC, 2006)
- Conservation of Habitats and Species and Planning (Various Amendments) (England and Wales) Regulations (2018)

#### **1.2. WILDLIFE AND COUNTRYSIDE ACT 1981 (AS AMENDED)**

1.2.1. The Wildlife and Countryside Act 1981 is UK legislation.

1.2.2. Bats are listed on Schedule 5 of the Wildlife and Countryside Act (WCA) 1981. Under Section 9 of this legislation it is an offence to:

- Kill, injure or take a bat.
- Possess, a live or dead bat.
- Intentionally or recklessly damage or destroy any structure or place which any bat uses as shelter or protection.
- Intentionally or recklessly disturb a bat whilst it is occupying a structure or place which it uses for shelter or protection.
- Intentionally or recklessly obstruct access to any structure or place which a bat uses as shelter or protection.
- Sell, offer or expose for sale any live or dead bat.

#### **1.3. COUNTRYSIDE AND RIGHTS OF WAY ACT 2000**

1.3.1. Schedule 12 of the Countryside and Rights of Way (CROW) Act 2000, amended by the Wildlife and Countryside Act 1981 by removing the need to prove intent to damage a roost / harm (etc) a bat or other species listed on Schedule 1 by adding the words 'or recklessly' after 'intentionally' into the wording in Section 9 of the WCA 1981. The CROW act also strengthened the penalties for offences to bats and other species listed on Schedule 5.

#### **1.4. CONSERVATION OF HABITATS AND SPECIES and PLANNING REGULATIONS 2018**

1.4.1. The Conservation of Habitats and Species and Planning (Various Amendments) (England and Wales) Regulations 2018 consolidate all the various amendments made to the Conservation (Natural Habitats, &c.) Regulations 1994 in respect of England and Wales.

1.4.2. The 1994 Regulations transposed Council Directive 92/43/EEC on the conservation of natural habitats and of wild fauna and flora (EC Habitats Directive) into national law. The regulations came into force on 30 October 1994.

1.4.3. The Regulations provide for the designation and protection of European Sites and European Protected Species, including bats.

1.4.4. Under the Regulations, competent authorities (ie any government department or public body) have a general duty, in the exercise of any of their functions, to have regard to the EC Habitats Directive.

1.4.5. With regard to European Protected Species (including bats), the Regulations make it an offence to:

- Deliberately capture;
- Kill;
- Disturb or;
- Trade in animals listed in Schedule 2, which include all UK bat species.

### 1.5. European Protected Species (EPS) Licenses and the Three Tests

1.5.1. These actions can be made lawful through the granting of licenses by the appropriate authorities. Licenses may be granted for a number of purposes (such as science and education, conservation, preserve public health and safety). For such a licence to be granted the appropriate authority would have to be satisfied that an application has met the three tests, which are:

- 1)- The licence may be granted "to preserve public health or public safety or for reasons of overriding public interest, including those of a social or economic nature and beneficial consequences or primary importance for the environment"
- 2)- There must be "no satisfactory alternative"
- 3)- The proposal "will not be detrimental to the maintenance of the species at a favourable conservation status in its natural range"

### 1.6. NATURAL ENVIRONMENT AND RURAL COMMUNITIES (NERC) ACT 2006 (PLANNING SYSTEM)

#### Planning Authorities: A Duty to Conserve Biodiversity

1.6.1. Under this legislation, planning authorities are obliged to make sure that they have all the information on the presence of protected species on site *before* they make a decision on the planning permission.

1.6.2. Part 2, Section 40 confers on the planning authorities a duty to conserve biodiversity and states:

*"Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of biodiversity"*

#### Species of Principal Importance

1.6.3. Part 3, Section 41 requires the Secretary of State to "*publish a list of the living organisms and types of habitat which in the Secretary of State's opinion are of **principle importance** for the purpose of conserving biodiversity*".

1.6.4. This requirement leads to production of a list of species and habitats of Principal Importance. This list includes all UK bats.

## PLANNING POLICY

### 1.7. NATIONAL PLANNING POLICY FRAMEWORK

1.7.1. In March 2012 the Government introduced the National Planning Policy Framework (NPPF). This

was revised in 2021

### Chapter 15: Conserving and Enhancing the Natural Environment

Chapter 15, Para 174 of NPPF states: *"The planning system should contribute to and enhance the natural and local environment by:*

- b) **protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils....***
- e) **minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures"**.*

Para 175 states: *"Plans should: distinguish between the hierarchy of international, national and locally designated sites; allocate land with the least environmental or amenity value, where consistent with other policies in this Framework; take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure; and plan for the enhancement of natural capital at a catchment or landscape scale across local authority boundaries."*

Para 179 identifies that plans should do the following to protect and enhance biodiversity and geodiversity:

- c) **"Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation; and***
- d) **Promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and peruse opportunities for securing measurable net gains for biodiversity."***

Para 180 states that *"when determining planning applications, local authorities should apply the following principles:*

- b) **if significant harm to biodiversity from a development cannot be avoided...,adequately mitigated, or, as a last resort compensated for, then planning permission should be refused"***
- c) **Development on land within or outside a Site of Special Scientific Interest, and which is likely to have an adverse effect on it (either individually or in combination with other developments), should not normally be permitted. The only exception is where the benefits of the development in the location proposed clearly outweigh both its likely impact on the features of the site that make it of special scientific interest, and any broader impacts on the national network of Sites of Special Scientific Interest;***

- d) ***Development result in the loss of deterioration of irreplaceable habitats (such as ancient woodland or ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensatory strategy exists; and***
- e) ***Development whos primary objective is to conserve or enhance biodiversity should be supported; while opportunities to incorporate biodiversity improvements in and around developments should be encouraged, especially where this can secure measurable net gains for biodiversity.***

Para 182 states “*the presumption in favour of sustainable development does not apply where development requiring appropriate assessment because of its potential impact on a habitats site is being planned or determined.*”

## **1.8. ODPM CIRCULAR 06/2005: BIODIVERSITY AND GEOLOGICAL CONSERVATION**

1.8.1. This document, to be read in conjunction with NPPF provides administrative guidance on the application of the law relating to planning and nature conservation as it applies in England. It makes it clear that it is the intention of the government that local authorities and developers consider protected species at the earliest possible stage in the planning process. Any planning application that is likely to affect protected species should come with details of the surveys which have been undertaken and should include, if necessary, recommendations for mitigation. Applications which do not include sufficient data should be rejected.
