EXECUTIVE SUMMARY

Appointment	Curtins were instructed by NHS Property Ltd to undertake a Preliminary Risk Assessment at Whitefield Library, Manchester, M45 7NY. The site is centered on NGR 380460, 405600 and covers an area of approximately 0.25Ha. It is understood the development proposal is for a refurbishment and change of use of the library to a medical centre, which includes drainage improvements, external hardstanding improvements and possible changes to the roof.
Current Site Status	The site is currently occupied by Whitefield Library which is a one-storey building in the centre of the site with associated hardstanding surround the site for carparking. The topography of the site is generally level.
Site History	Earliest available mapping (1848) records the site as undeveloped agricultural land until 1969 where the library is constructed on site with associated hardstanding for parking. The site remains the same to present day. Surrounding the site was mainly fields with Pinfold Lane and Higher Lane recorded north and west of the site respectively. Between 1848 and 1923 construction in close proximity is recorded which includes residential properties, with the closest recorded 10m east of the site, and a school. Further residential expansion is recorded between 1956 and 1972. By 1989 the day centre has been constructed 5m west of the site and further residential and commercial expansion has been recorded between 1989 to present day.
Geology	BGS mapping indicates the site is underlain by Nob End Rock (bedrock). BGS mapping indicate the presence of Glacial Till superficial soils underlying the site. The site is in a low probability radon area where <1% of homes are estimated to be at or above the radon Action Level. The likelihood of encountering relic mining features on-site is unlikely and, therefore, the risk to the proposed development is Low.
Hydrogeology	The site is underlain by a Secondary A Aquifer associated with the bedrock formation. The site is not located within a Source Protection Zone. There are no potable groundwater abstraction points located within 700m of the site.
Hydrology	The nearest surface water feature is an unnamed pond located approximately 131m northeast of the site. There are no surface water abstraction located within 1km of the site. No pollution incidents recorded within 500m of the site in the last 10 years.
Landfill and Pollution	There are no historical landfills located within 1km of the site. There are no licensed waste management facility located within 500m of the site. There are four records of potentially infilled land located within 250m of the site with the closest located 103m north of the site.
Unexploded Ordnance (UXO)	The site is recorded to be in a LOW risk UXO area. No ruins are recorded on post-war mapping and the site has undergone significant constructions works following the war further limiting the potential for encountering UXO during the ground investigation. Therefore, the likelihood of encountering UXO on site as part of the ground investigation works is low based on the available information and the risk is assessed as Low. For below ground demolition or construction works the principal contractor should carry out their own UXO risk assessments with specific consideration of their scope of works.
Initial Ground Contamination Assessment	The risk from Made Ground posed to the site's end-users is considered to be Moderate/Low due to the potential for contamination in the Made Ground, and Moderate/Low for the risk to construction workers. The risk posed to surface water is considered to be Low due to the distance to the nearest surface water feature. The risk posed to groundwater is considered to be Low accounting for limited potential sources of contamination. The risk posed to site end-users from ground generating gases arising from organic / putrescible soils is considered to be Moderate / Low.

Ground Engineering Considerations	Ground stability hazards on site are recorded as Low to No Hazard . There may be subsurface obstructions, voids and relic foundations associated with library infrastructure.
	The following recommendations are made: • Undertake an intrusive ground investigation to collect chemical and geotechnical samples. Install positions for monitoring sub-surface conditions. • Where evidence of gross contamination or groundwater contamination is identified, groundwater samples may be required to further assess the risk to human health or controlled waters. • Undertake a GQRA as part of the ground investigation to determine contaminated land risks. • Undertake ground gas monitoring and groundwater level monitoring to develop the CSM and ground model.
Recommendations

1 INTRODUCTION

1.1 Project Background

Curtins were instructed by NHS Property Ltd to undertake a Preliminary Risk Assessment at Whitefield Library, Manchester, M45 7NY. It is understood that development proposals include the refurbishment and change of use of the library to a medical centre. This includes drainage improvements, external hardstanding improvements and possible changes to the roof (green roof and solar panels).

1.2 Scope of Services

The Phase 1 PRA is intended to provide an overview of the geo-environmental and geo-technical setting of the site.

These works are undertaken in general accordance with the LCRM: Stage 1 risk assessment (Ref. 1). Through this overview the Phase 1 aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 provides an initial assessment of the site regarding:

- a) Potential contamination of the site strata by historical and or current use;
- b) The potential impact on the wider environment by historical and or current use of the site of interest;
- c) The potential impact from surrounding land uses and other environmental factors;
- d) Potential problems associated with geological features such as faulting, mineral extraction, mining, and land instability;
- e) The location of apparent sub-surface structures that may affect the proposed redevelopment; and
- f) The location of above-surface features that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report.

2 CURRENT SITE AND SURROUNDING AREA DETAILS

2.1 Current Site and Surrounding Area Details

Site use, location and description are shown below in Table 1 and Figure 1.

Table 1 – Site Details

Site Address	Whitefield Library, Pinfold Lane, Manchester, M45 7NY
NGR	380460, 405600
Area of Site	Approximately 0.26Ha.
Current Site Use and Description	The site is occupied by the former Whitefield Library which comprises of a one-storey structure (located centrally) with associated hardstanding. Hardstanding carpark areas are present in the north and south of the site. An area of soft landscaping with mature trees is located within the northeast section of the site. The topography of the site is generally level.

Figure 1 - Site Location Plan. Site Boundary in Pink.

2.2 Surrounding Area Details

The following information was also established during the site visit and through undertaking an environmental database search (Envirocheck report (Ref. 2) included in *Appendix B*).

Table 2 – Surrounding Area

Surrounding Area	N	Pinfold Lane with residential properties beyond.
	E	Residential properties.
	S	Residential apartments with Higher Lane Primary School beyond.
	W	Day Centre building and car parking (assumed to be associated with the library) with Higher Lane and Young Athlete Academy with playing fields beyond.

3 SITE HISTORY

A review of the available historical mapping and other information for the site, as presented within the Envirocheck report (Ref. 2), has been undertaken and is presented in Table 3 below. **Bold** text indicates within the site boundary.

Table 3 – Previous Site and Surrounding Area Uses and Potential Sources of Contamination

Date	Description	Potential Sources of Contamination
1848 - 1965	Earliest available mapping (1848) records the site as undeveloped agricultural land. 1848 maps record mainly agricultural fields surrounding the site with Pinfold Lane situated along the northern boundary and Higher Lane approximately 50m west of the site. A pond is recorded 80m east of the site. Limited development is recorded within 250m of the site. Between 1848 and 1909 the map records residential construction north of Pinfold Lane and within 250m north, east and south of the site. 1909 map records two residential properties approximately 10m east of the site. By 1923 a school is recorded approximately 90m south of the site.	• No potential sources identified onsite. • Potential for uncontrolled deposition of Made Ground associated with road constructions and local construction and demolition works. • Potential for uncontrolled deposition of ash associated with residential coal fires.
	By 1969 a building has been constructed within the centre of the site marked as a Library with associated hardstanding for road access off Pinfold Lane and parking with soft landscaping recorded within the northeast of the site. Between 1956 to 1972 further residential expansion is recorded north and east of the site, a Grammar school is recorded 150m west of the site and a cricket ground 150m north. A tennis court is recorded 50 south of the site with a club building constructed by 1972. The school 90m south of the site has been extended by 1974.	• Potential uncontrolled deposition of Made Ground during construction of the library. • Building located on site was constructed and maintained during a time when asbestos may have been used. • Potential for localised fuel spills and leakages associated with hardstanding carparks and roads located onsite. • Potential for uncontrolled deposition of Made Ground associated with local construction and demolition works.
1992 – Present	The site remains the same from 1969 to 2025 as Whitefield Library. By 1989 the day centre approximately 5m west of the site has been constructed and further residential expansion recorded 150m northwest and northeast. Present day records the surrounding site as residential and commercial, including a day centre and a schools with associated playing fields within 100m.	• Potential for localised fuel spills and leakages associated with hardstanding carparks and roads located onsite. • Potential for uncontrolled deposition of Made Ground associated with local construction works.

Potential sources of on-site contamination are further discussed in *Section 7.0*

4 GEOLOGY, HYDROGEOLOGY AND HYDROLOGY

4.1 Geology and Hydrogeology

A study of the Envirocheck records (Ref. 2), British Geological Survey (BGS) 1:50,000 mapping records (Bedrock and Superficial Editions) for Manchester (Sheet 085) (Ref.3) indicates the following geological and hydrogeological succession underlying the site:

Table 4 – Geological / Hydrogeological Succession

Geology	Associated Hydrogeological Classification
BGS records do not indicate the presence of Made Ground beneath the site. Due to the phases of construction that have taken place on site it is considered likely that Made Ground will be present.	N/A
Glacial Till (Diamicton) ¹	Secondary Undifferentiated ²
Nob End Rock ³	Secondary A Aquifer ⁴

Notes:

1. These comprise a group of sediments laid down by the direct action of glacial ice, usually comprising sand and gravel layers of varying colour.
2. Secondary Undifferentiated Aquifers are aquifers where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the rock type.
3. Fine to medium grained, well bedded sandstone. Which is also part of the [Pennine Middle Coal Measures Formation](#).
4. Secondary A Aquifers comprise permeable layers that can support local water supplies and may form an important source of base flow to rivers.

There are no BGS borehole records located on site, however, there are 10 BGS borehole records within 250m of the site of which only one of these are available to access within the surrounding area considered to be representative of site conditions. Details of this record is presented in Table 5 below.

Table 5 – BGS Borehole Records

Record Number	Location	Details (Depth to base of strata (m bgl), Description and Thickness (m))
SJ80NW241	380420, 405380 112m South	0.25 – Topsoil (0.25) 3.00 – Clay (2.75) 15.50 – Silty Sand (12.50) 29.80 – Soft Sandy Boulder Clay (14.30) 54.50 – Clay (24.70) 56.00 – Boulder Clay (1.50) 63.20 – Clay (7.20) 70.50 – Boulder Clay (7.30) 88.00 – Shale & Mudstone (17.50) 97.00 – Dark Brown Mudstone & Shale (9.00) 101.00 – Grey & Brown Sandstone (4.00) 110.5 – Red & Brown Mudstone (9.50) 112.00 – Grey & Brown Sandstone (1.50) Borehole completed at 112.000m bgl No Groundwater encountered

There are no BGS recorded faults onsite or within 150m of the site. The closest fault is recorded 160m north of the site aligned east to west

The site is not located within a Source Protection Zone (SPZ).

There are two groundwater abstractions within 700m of the site. These are both located 186m south at the Whitefield Golf Club Ltd for spray irrigation on the golf course. There are no potable groundwater abstractions within 700m of the site.

4.1.1 Mining

The Envirocheck Report (Ref 2) and the Mining Remediation Authority's online interactive mapping (Ref. 5) confirms that the site is situated within a Coal Mining Reporting Area. However is not within a High Risk Development area. Furthermore there are no mining features such as mine entry within 1km of the site. Therefore, the risk associated with historic coal mining has not been considered further.

There was one recorded BGS mineral site within 500m of the site. This was located 390m west of the site for Glaciofluvial deposits however the status is recorded as ceased.

Based on the foregoing commentary the likelihood of encountering relic mining features on-site is unlikely and therefore, the risk to the proposed development is low.

4.1.2 Other Ground Stability Issues

The Envirocheck Report confirms the following in relation to potential geotechnical hazards highlighted in Table 6 below:

Table 6 – Ground Stability Hazards for the site.

Ground Stability Hazard	Hazard Potential On-site
Collapsible Ground	Very Low
Compressible Ground	No Hazard
Ground Dissolution (Soluble Rocks)	No Hazard
Landslide	Very Low
Running Sand	No Hazard
Shrinking or Swelling Clay	No Hazard

Given the information above there is unlikely to be a need to address any of the ground stability hazards. However, intrusive ground investigation works will confirm the nature of the ground conditions at the subject site.

4.1.3 Radon Ground Gas

The Envirocheck report (Ref. 2) indicates that the site is located within a lower probability radon area (Less than 1% of homes are estimated to be at or above the radon action level).

Where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

4.2 Hydrology

The Envirocheck Report indicates the closest surface water feature is an unnamed pond located 131m northeast of the site.

No pollution incidents have been recorded within 500m of the site within the last 10 years.

There are no surface water abstractions within 1km of the site.

There are no active discharge consents within 700m of the site.

4.3 Landfill and Pollution

There are no historical landfills located within 1km of the site.

There are no licensed waste management facilities located within 1km of the site.

There are no Local Authority Pollution Prevention and Control Permits located within 800m of the site.

There are four records of potentially infilled land (water) within 250m of the site. The nearest is located 103m north of the site dated 1923 which seems to be a small pond which was infilled before a house was built.

5 PRELIMINARY UNEXPLODED ORDNANCE RISK ASSESSMENT

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

An assessment of the likelihood of being UXO encountered has been undertaken to advise any intrusive ground investigation in the event that this is undertaken by Curtins. This risk is influenced by a number of factors including the proximity to strategic targets, the nature of the works being undertaken and evidence of local damage in the post-war periods amongst others. In order to determine the likelihood of UXO being present on a site, a stepwise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry.

5.1 Preliminary UXO Assessment

It should be noted that the following assessment will only be applicable to future works with respect to ground investigation works completed by Curtins only. This includes trial pitting and boreholes to determine the nature of the ground conditions for geo-environmental and geotechnical information. Where the client is looking to determine the risk from UXO throughout the entire enabling works and construction phase of the below ground level development, the principal contractor appointed for the enabling and construction works must obtain their own Detailed UXO Risk Assessment Report to advise their specific works, where deemed to be required by the Principal Contractor.

The risk presented by Unexploded Ordnance, identified using preliminary Unexploded Bomb (UXB) risk maps retrieved from Zetica UXO (Ref. 8), indicates that the site is situated in a designated **LOW**-Risk area in respect to the potential presence of UXB as a result of World War Two bombing.

The Envirocheck Report historical mapping (Ref. 2) does not indicate any ruins surrounding the site in post war mapping. The site has undergone significant construction works post war, further limiting the potential of encountering UXO during the ground investigation.

Based on the forgoing commentary, the likelihood of encountering UXO on site as part of the intrusive ground investigation works is **Low** and therefore has not been considered further.

For below ground demolition or construction works the principal contractor should carry out their own UXO risk assessments with specific consideration of their scope of works.

If unexploded ordnance is discovered, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

6 CONCEPTUAL SITE MODEL & QUALITATIVE RISK ASSESSMENT

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table presented in this section.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in Section 8.1 below.

The QRA follows the framework outlined within CIRIA C552 which is summarised within *Appendix C*.

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but none-the-less can be of critical importance to the onward development of the site.

- The risk presented by Mining is discussed and assessed in Section 5.1.1.
- The risk presented by Radon is discussed and assessed in Section 5.1.3.
- The risk presented by Unexploded Ordnance is discussed and assessed in Section 6.1.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors, and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations (2015) (Ref. 9) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements.

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- For a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to negligible risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data, a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	Pathway(s)	Receptor(s)	Consequence	Likelihood of Occurrence	Risk Rating	
On-Site Sources of Potential Contamination: - Made Ground of unknown composition from uncontrolled deposition of materials onsite during the construction of building onsite. - oils/hydrocarbons relating to the hardstanding car parking and roads on site. - Buildings were constructed and maintained during a period when asbestos containing materials may have been used. - Potential for asbestos containing materials to have been present within fill used in construction of hardstanding. Off-site Sources of Potential Contamination: - Uncontrolled deposition of Made Ground during nearby construction works and infilling. - Potential spillages and leakages associated with nearby hardstanding carparks and road infrastructure.	Direct contact, ingestion, inhalation (dust and vapours)	End user of site Staff and patients	Medium <i>Chronic health risk</i>	Low Likelihood Based on the age of the building onsite, asbestos may be present onsite. There is potential for localised leakages and spills associated with the hardstanding carparks/road infrastructure contamination may be present in site soils.	Moderate / Low	Generic Quantitative Risk Assessment Recommended as part of the investigation.
		Construction and maintenance Workers	Medium <i>Chronic health risk</i>	Low Likelihood Workers should be provided with appropriate PPE to prevent exposure to any potential contaminants on site.	Moderate / Low	Workers should be provided with appropriate PPE and sanitary facilities during investigation and construction works.
	Vertical Migration through the superficial deposits May occur due to existing service corridors, basements, and physical processes including; capillary action and downwards into the natural deposits through infiltration.	Controlled Waters (Groundwater) Secondary A Aquifer associated with bedrock deposits Site is not located within a Source Protection Zone. No potable groundwater abstractions within 1km.	Medium <i>Pollution of sensitive water resources</i>	Unlikely Limited potential sources of on-site groundwater contamination based on site history.	Low	Ground Investigation. Should evidence of gross contamination and porous ground conditions be identified during the ground investigation, groundwater samples should be obtained to reassess the potential risks to groundwater
	Horizontal Migration over and through the superficial deposits (soils) May occur due to the influence of perched or natural groundwater flow patterns and natural or man-made high permeability zones, e.g. sand lenses or drainage runs.	Controlled Waters (Surface Water) Nearest surface water feature is an unnamed pond located 131m northeast. No surface water abstraction points within 1km.	Medium <i>Pollution of sensitive water resources</i>	Unlikely Limited potential sources of mobile contamination based on site history. The nearest surface water receptor is located at a sufficient distance from the site to prevent lateral migration of contaminants, breaking any potential source-pathway-receptor linkage.	Low	Ground Investigation. Should evidence of gross contamination and porous ground conditions be identified during the ground investigation, groundwater samples should be obtained to reassess the potential risks to groundwater
On and off-site soils with the potential to generate ground gases: - Potential for Made Ground from construction on-site with unknown material that has the potential to contain organic / putrescible material. - Potential for ground gas migration associated with potentially infilled land 103m north of the site.	Vertical and horizontal migration through existing service corridors and the underlying superficial deposits	End user of site Staff and patients	Medium <i>Acute health risk, e.g. asphyxiation or risk from explosion</i>	Low Likelihood Low gas generation potential within Made Ground soils.	Moderate / Low	Generic Quantitative Risk Assessment Recommended as part of the ground investigation.

7 CONCLUSION AND RECOMMENDATIONS

The qualitative risk assessment (QRA) determined a varied level of level of risk associated with the proposed development.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development an outline scope for which is detailed in the section hereafter.

In summary, the following recommendations are made:

- Undertake an intrusive ground investigation to collect chemical and geotechnical samples. Install monitoring wells for monitoring sub-surface conditions.
- Undertake a GQRA as part of the ground investigation to determine contaminated land risks.
- Undertake ground gas monitoring and groundwater level monitoring to develop the CSM and ground model.
- Where evidence of gross contamination or groundwater contamination is identified, groundwater samples may be required to further assess the risk to human health or controlled waters.

It is further recommended that this work is completed in advance of any development works taking place.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Site History and the Conceptual Site Model in Sections 3.0 and 6.0 respectively include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); polychlorinated biphenyls (PCBs); inorganic compounds including heavy metals and asbestos.

Potential contaminants associated with the air-born dust/particulates include but are not limited to polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential on-site contaminants of concern.

7.2 Other Considerations

There may be subsurface obstructions, voids and relic foundations associated with the Library infrastructure.

The requirement for additional surveys, e.g. arboricultural, archaeological and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

91	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A19NW (NE)	790	-	380921 406277
92	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A7NE (SW)	795	-	379919 404976
93	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A17SE (NW)	818	-	379792 406136
94	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1894	A7NW (SW)	845	-	379683 405207
95	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A7SE (SW)	848	-	379942 404887
96	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1955	A7NW (SW)	856	-	379738 405088
97	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A14SE (E)	934	-	381367 405261
98	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A18NE (N)	946	-	380797 406518
99	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A18NW (N)	952	-	380141 406531
100	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1848	A19NW (NE)	963	-	380925 406478
101	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1923	A9SW (SE)	972	-	381105 404832
102	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1955	A14NE (E)	977	-	381420 405892
103	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A8SW (S)	977	-	380297 404599
104	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1894	A19SE (NE)	982	-	381264 406204
105	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1956	A7SW (SW)	986	-	379765 404858
106	Potentially Infilled Land (Water) Use: Unknown Filled Ground (Pond, marsh, river, stream, dock etc) Date of Mapping: 1894	A19SE (NE)	994	-	381273 406212

Curtins

Lancashire And Furness

Published 1848 - 1850

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
