1.0 INTRODUCTION

1.1 Instruction

- 1.1.1 GeoCon Site Investigations Ltd (GeoCon) have been commissioned by RCA Logistics Limited (“the client”) to undertake a Phase I Preliminary Risk Assessment (PRA) on land at Globe Industrial Estate, Darbyshire Road, Radcliffe.
- 1.1.2 It is understood that a PRA is required to assist with a planning application for a proposed commercial / industrial development at the site.
- 1.1.3 This report is therefore provided to establish the potential for contamination at the site as a result of current and historic land uses both on site and within influencing distance of the site, to understand the potential type of contamination that may be present; and, to identify the potential ground conditions ; and, to establish the potential risks from shallow coal mining.
- 1.1.4 This report is written in accordance with the guidance set out in Land Contamination Risk Management (LCRM), Guiding Principles for Land Contamination (GPLC) 1 – 3, and the National Planning Policy Framework (NPPF).

1.2 Scope of Works

- 1.2.1 Prior to commencing the site works the proposed scope of investigation was as follows, however the proposed scope will be subject to change dependent upon site conditions, access, restrictions and obstructions.
 - To appraise the land use history of the site by the examination of available historical plans.
 - To assess the environmental setting of the site with specific reference to geology, mining & quarrying, hydrogeology and hydrology.
 - To gain an understanding of any concerns of the regulatory authorities (Local Authority Planning, Building Control and Environmental Health departments and the Environment Agency) regarding local land filling, flooding, mining, quarrying and other concerns.
 - To produce a Preliminary Conceptual Site Model (CSM).

1.3 Previous Investigations

- 1.3.1 GeoCon have not been provided with any previous investigation reports and are unaware that any have been carried out to date.

1.4 Reliance and Limitations

- 1.4.1 This report has been prepared using published information and information provided by the Client and their professional advisers which has been made available to GeoCon at the time of writing only. GeoCon accepts no liability for any changes resulting from new information which has become available since this time.
- 1.4.2 This report is provided for the sole use of the client and their professional advisors and is confidential to them unless agreed otherwise in writing. This report may only be used and relied on once the work has been paid for in full. GeoCon owes no duty of care and has no liability to any third party who is not authorised by GeoCon to use this report. Any unauthorised third parties using information contained in this report do so at their own risk.
- 1.4.3 This assessment has been carried out to determine the potential risks posed to future end users, along with other key receptors, resulting from potential contamination at the site, based on the proposed

development. Should any revisions in the development proposals result in a change in any assessment parameters detailed in this report, a re-assessment of the risk should be carried out.

- 1.4.4 Whilst this report may reference observations made regarding the presence of features/ issues such as invasive species, Asbestos Containing Materials (ACM), site drainage and evidence of structural abnormalities, this report does not constitute specialist surveys on these matters. Should further specialist surveys be carried out in this regard, the findings of these should be reported to GeoCon so that we may determine if this has any impact on the findings of this report.
- 1.4.5 The assessment and interpretation of the factual data obtained as part of this Phase I Preliminary Risk Assessment has been undertaken in accordance with standard consulting practise and with current national and international guidance.
- 1.4.6 This report presents the observations made during the Phase I Preliminary Risk Assessment and the factual data obtained. The conclusions and recommendations in this report are limited to those which can be made based on the findings of the survey and information provided by third parties. GeoCon assumes all third-party data to be true and correct. No responsibility can be accepted by GeoCon for inaccuracies in the information provided by any other party.
- 1.4.7 This report is written in the context of an agreed scope of works and should not be used in a different context. Furthermore, new information, improved practises, and changes in legislation may require the reinterpretation of the report in whole or in part after its original issue. GeoCon reserve the right to alter their conclusions and recommendations in the light of further information that may become available.
- 1.4.8 It should be noted that ground conditions including contaminant concentrations and groundwater levels may vary spatially with time. This factor should be given due consideration in the event that the information contained within this report is used after any significant period of time has elapsed.

2.0 SITE LOCATION AND DESCRIPTION

2.1 Site Location

2.1.1 The site is located on land at Globe Industrial Estate, Darbyshire Street, Radcliffe; at approximate National Grid Reference NGR: 378580, 407410 (centre of the site).

2.1.2 A site location plan is presented as Drawing No. GSI 2491/01 in Appendix A.

2.2 Site Reconnaissance

2.2.1 It should be noted that as a site reconnaissance has not been carried out at this stage, the site description has been taken in part from Google Earth and Google Street View imagery and site photographs provided by the client, at this stage. A site walkover will be carried out either prior to or during any Phase II investigation and this report will be updated accordingly.

2.3 Site Description

2.3.1 The site is an irregular shape with an approximate area of 0.03Ha.

2.3.2 The topography of the site is generally flat.

2.3.3 The site is currently occupied by a telephone mast surrounded by fencing, with the southern extent hardstanding roadway of the industrial estate.

2.3.4 An approximate distribution of the surface covering is given below in Table 2.1: Site Surface Covering.

Table 2.1: Site Surface Covering

Type of Surface Cover	Distribution (%)
Soft Ground (grassed and landscaped areas)	-
Hardstanding	100
Roadways	-
Buildings	-
Water (ponds, streams)	-

2.3.5 The site is bound by a masonry wall to the north with Spring Lane beyond. To the west and east are warehouse units with southern extent not defined by a physical boundary.

2.3.6 Access to the site is via Darbyshire Street to the west.

2.4 Surrounding Area

2.4.1 The current surrounding land use to the site is commercial / industrial within the Globe Industrial Estate, with residential and commercial properties noted further south and north of the site. Further to the west is a landscaped park with residential properties beyond and to the east is commercial and car parking.

2.4.2 The topography of the surrounding area is generally flat with localised undulations.

2.5 Future Site Usage

2.5.1 It is currently proposed for the construction of a new 94m² B2/B8 (General Industrial / Storage and Distribution) unit within the established Globe Industrial Estate, which will include the removal of the existing mast.

2.5.2 A proposed development plan provided by Meads Architecture referenced S(00)03 is presented in Appendix A.

- 2.5.3 This assessment has been carried out with reference to this proposed development plan as provided by the client. Any changes to the proposed development may result in this assessment required to be updated accordingly.

3.0 SITE HISTORY

3.1 General

- 3.1.1 The history of the site has been determined from available historical maps obtained as part of the Envirocheck Report and via the Envirocheck Analysis online historical mapping tool. The history of the site and of the surrounding area is summarised overleaf in Table 3.1: Site History. It should be noted that some of the maps come with little to no coverage.
- 3.1.2 The information presented overleaf in Table 3.1: Site History, is given based on the distance and direction from the closest point of each feature to the site. The table presents the data broken down into the following categories: - feature; the potential use of each feature where applicable; the date each particular feature is first observed; the direction of each feature from the site; the approximate distance of each feature from the site; the approximate area of each feature; and any other relevant information regarding the site and surrounding area in general.
- 3.1.3 The historical mapping records are presented in Appendix B.

3.2 Aerial Photography

2000 Aerial Photograph:

- 3.2.1 The 2000 aerial photograph show the site occupied by the Globe Industrial Estate, featuring a number of buildings and yard area, with the site area clear of any construction. The surrounding area is predominantly residential to the south, with a park to the west and a high school to the northeast. To the north is residential and commercial units with a disused canal further north.

Recent Aerial Photograph:

- 3.2.2 Recent aerial photography shows the site to largely remain the same since the 2000 aerial photograph, with exception that a mast is present on the site. Some small changes are present to the industrial estate. To the east is a large park and ride car park.

Table 3.1: Site History

Feature	Date first observed	Date no longer shown	Direction (from site)	Distance (from site)	Area (m²)	General notes
Grey Street	1889	1987	NW	On site	-	Becomes part of Globe Industrial Estate with roadway blocked off. Site remains undeveloped until construction of Mast
Timber Yard	1889	1989	SW	5	892	crane present, by 1937 large warehouse present
Iron Works	1889	1989	E	7	1998	By 1986 building demolished and smaller units constructed
Saw Mill	1889	1989	S	9	581	Demolished by 1989 and smaller warehouse unit constructed
Chimney	1889	1956	E	12	0	NA
Railway	1848	1976	NW	24	0	Recessed channel, orientated northwest to southeast, dismantled by 1976 and infilled as landfill and turned into a park by 1986
Albert Works	1889	Present	SE	53	698	Unknown works
Radcliffe Works	1889	1976	N	57	868	By 1956 warehouse
Works	1976	1996	NE	62	457	NA
Smithy	1891	1996	E	79	50	By 1956 expanded in size becoming iron works, by 1976 becomes Mill
Railway	1889	1976	NE	102	0	Dismantled by 1964
Tank	1956	1987	N	110	0	Unknown use
Chemical Works	1956	1987	N	116	237	NA
Electrical substation	1964	Present	S	123	0	Predates the PCB ban
Railway Goods Station	1889	1976	NE	133	12099	Sidings, cranes and warehouses present, later the site of a high school
Scrap yard	1956	1976	N	138	586	NA
Mills	1889	1989	NW	174	2285	NA
Reservoir	1889	1891	NW	186	98	Potentially infilled with unknown materials; by 1909 becomes filter beds
Reservoir	1956	1976	NW	211	347	Potentially infilled with unknown materials
Railway	1964	Present	E	234	0	NA
Canal	1889	Present	NW	237	0	NA
Site and surrounding area in general	During the late 1800's the site is formed by Grey Street roadway, with industrial works situated to the east and west of the site, and a recessed railway line present further to the west. By early 1900s a raised embankment is present to the east and a new railway line constructed and goods yard is present: Adjacent the site to the east is metal works and chimney and a number of other industrial uses, including mills and smithy are present in the surrounding area. To the south residential area is present and to the north works are present, including a reservoir, with the canal present beyond this. Over the 1900s the site remains in the same condition, with changes to building layouts adjacent to the site being noted. Key changes occur during the 1970s and 1980s when the railways become disused and industry in the area is reduced to the Globe Industrial Estate. The recessed area of the railway to the west is infilled as a landfill during this time and becomes a park by early 1990s.					

4.0 ENVIRONMENTAL SETTING

4.1 General

- 4.1.1 A number of third parties have been approached to collate information relating to the site, its environmental setting, and any issues pertaining. The following third-party sources have been utilised which are outlined below in Table 4.1: Sources of Information:

Table 4.1: Sources of Information

Source	Information
Landmark	Envirocheck Report Geology Report
British Geological Survey (BGS)	BGS Open Geoscience online geological mapping tool
Ordnance Survey	OS Open Data online mapping tool
Mining Remediation Authority	Online Gazetteer of England and Wales Consultants Coal Mining Report Mining Remediation Interactive Viewer
Environment Agency (EA) Online	Water Quality Data and Aquifer designation

- 4.1.2 The Landmark Envirocheck report is provided in Appendix C.

4.2 Published Geology

- 4.2.1 The British Geological Survey shows the site to be underlain by the geological succession outlined below in Table 4.2: Published Geology.

Table 4.2: Published Geology

Geology	Description /strata	BGS General Description (Lexicon)
Artificial	None recorded	NA
Superficial	Till	No BGS description available, generally described as a sandy clay with inclusions of sand and gravels
Bedrock	Pennine Middle Coal Measures Formation	Interbedded grey mudstone, siltstone, pale grey sandstone and commonly coal seams, with a bed of mudstone containing marine fossils at the base, and several such marine fossil-bearing mudstones in the upper half of the unit.

- 4.2.2 There are no relevant historical BGS borehole records are available for the site.

4.3 Potential Contamination Sources

- 4.3.1 The following potential sources of contamination have been identified.

Fuel Storage

- 4.3.2 There is one fuel station within 500m of the site, located approximately 472m to the northeast of the site.

Contemporary Trade Directories

- 4.3.3 There are thirty five contemporary trade directories within 250m of the site. Pertinent entries include:

- Tyre Dealers, 9m to the southwest (Active)
- Garage services, 35m south (inactive)
- Boiler manufacturers, 37m southwest (inactive)
- Garage services, 38m southwest (inactive)

- MOT testing centre, 34m east (inactive)
- Powder coatings, 68m north (inactive)
- Garage services, 134m west and 165m southeast (inactive)
- Garage services, 185m southeast (active)

Environmental Pollution Measures

- 4.3.4 There is one Local Authority Pollution Prevention and Controls within 250m of the site, relating to KC motors, located 183m southeast of the site for Waste Oil burners.
- 4.3.5 There are no entries on the substantiated pollution register within 250m of the site
- 4.3.6 There are no hazardous substance uses recorded within 500m of the site.

Landfills and Waste

- 4.3.7 There are no BGS recorded landfill sites, licensed waste management facilities, local authority recorded landfill site, registered landfill sites, registered waste transfer sites, and no registered waste treatment or disposal sites within 250m of the site boundary.
- 4.3.8 There is one historical landfill site located within 250m of the site, further details are given below:
 - Land at Darbyshire Street (Former Railway), located 21m northwest: input from 1974, no waste specified.
- 4.3.9 Information provided by Landmark's Environmental Database indicates that there are two areas within 250m of the site where the potential for infilling is possible. These include former excavations that may have been infilled within unknown materials.
 - Unknown filled ground, dated 1992, located 177m west
 - Unknown filled ground, dated 1992, located 215m southeast
- 4.3.10 There are two areas identified on the historical maps within 250m of the site where the potential for infilling is possible which include former reservoirs that are no longer shown on more recent maps indicating that they may have been infilled within unknown materials.
 - Potentially infilled reservoir (later site of filter beds), located 186m northwest, last mapped in 1891
 - Potentially infilled reservoir, located 211m northwest; last mapped in 1976
- 4.3.11 Made Ground is likely present on the site with unknown thickness and composition.

4.4 Radon

- 4.4.1 The Envirocheck report shows the site is located within a lower probability radon area, as less than 1% of homes are above the action level. Therefore, no radon protection measures are necessary in the construction of new dwellings or extensions.

4.5 Hydrogeology

Superficial Deposits

- 4.5.1 The Environment Agency aquifer classification scheme indicates that the superficial aquifer designation for the site is classed as Secondary Undifferentiated aquifer which are generally described as having been

'assigned in cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.' (EA general description).

Bedrock

- 4.5.2 The Environment Agency aquifer classification scheme indicates that the bedrock aquifer designation for the site is classed as Secondary A aquifer which are generally described as *'permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers'* (EA general description).

Groundwater Abstractions

- 4.5.3 There is one licenced groundwater abstraction points within 1000m of the site. The nearest to the site is located approximately 933m east relating to abstraction for manufacturing.
- 4.5.4 There are no public drinking water abstractions within 1000m of the site.
- 4.5.5 It is possible that there may be private unlicensed water abstractions that exist locally in the area.
- 4.5.6 There are no Source Protection Zones (SPZ) within 2000m of the site.

4.6 Hydrology

- 4.6.1 The nearest surface watercourse to the site is the Bolton & Bury Canal located 236m northwest of the site.
- 4.6.2 There are no discharge consents within 250m of the site.
- 4.6.3 There are no pollution incidents to controlled waters within 250m of the site.

Surface Water Abstractions

- 4.6.4 There are six licenced surface water abstraction points within 1000m of the site. The nearest to the site is the Bolton & Bury Canal, located 284m west.
- 4.6.5 It is possible that there may be private unlicensed water abstractions that exist locally in the area.

Flooding

- 4.6.6 The site has potential for groundwater flooding of properties situated below ground level.

4.7 Mining, Subsidence and Foundations

- 4.7.1 There are no BGS recorded mineral sites within 250m of the site boundary.
- 4.7.2 The Mining Remediation Authority and Envirocheck Report indicates that the site is located within a coal mining area and that a Coal Mining report should be obtained for the site. Subsequently a Coal Mining report has been commissioned for the site; and the details are given below.

- Past underground mining has occurred at the site, with the ROGER coal seam (98m depth) last worked in 1883 and extracted thickness of 1.90m and the RAMS coal seam (127m depth) last worked in 1893 and extracted thickness of 1.70m.
- Potential for probable unrecorded shallow workings beneath the site.
- No spine roadway recorded at shallow depth

- No mine entries recorded within 100m of the site boundary
- No outcrops recorded, or faults fissures or breaklines, beneath the site
- No opencast mines recorded within 500m of the site.
- No mine gas recorded within 500m of the site.
- There are no recorded site investigation, remediated sites or coal mining subsidence claims within 50m of the site

4.7.3 The Coal Mining Report is presented in Appendix D.

4.7.4 Landmark indicates that the risk from non-coal mining is negligible.

4.7.5 The British Geological Survey provide risk ratings for the potential geological hazards outlined below in Table 4.3: Potential Geological Hazards.

Table 4.3: Potential Geological Hazards

Potential Geological Hazard	Hazard Potential
Collapsible Ground	Very low
Compressible Ground	No hazard
Ground Dissolution	No hazard
Landslides	Very low
Running Sands	Very low
Shrinking or Swelling Clay	Very low

4.8 Environmentally Sensitive Sites

4.8.1 There are no significant environmentally sensitive sites within 250m of the site.

5.0 PRELIMINARY ENVIRONMENTAL RISK ASSESSMENT

5.1 Introduction

- 5.1.1 In statutory guidance regarding potentially contaminated land, risk assessments are used as a technique on a site-specific basis to identify potential environmental issues. As recommended by BS 10175 an Initial Conceptual Generic Model has been formulated which defines the 'pollutant linkage' through source, pathway and receptor methodology. All three must be present in order to pose a risk to the end users and to the environment; i.e., if there is no pathway between the source and the receptor, then there is no 'pollutant linkage' and hence negligible risk to the receptor.

5.2 Risk Assessment Methodology

- 5.2.1 The purpose of a Phase I Preliminary Risk Assessment (PRA) is to obtain information regarding the site to gain a preliminary understanding of potential environmental issues and the potential for land contamination. This information includes existing and proposed site uses, the history of the site and surrounding area, and the environmental setting. The information obtained is used to develop a Conceptual Site Model (CSM), which describes sources (potential hazards), pathways, and receptors, which may be relevant to the site. The following definitions have been adapted from Part IIA of the Environmental Protection Act (EPA) 1990:

- 5.2.2 **Source** – A source can be defined as a potential contaminant, substance, or condition that has the potential to cause harm to the environment, humans or other flora and fauna.
- 5.2.3 **Pathway** – A pathway is defined as the route by which a source is brought into contact with a receptor. This can include the transport of contamination via groundwater, wind borne dust, vapours, excavation and deposition, dermal contact, ingestion and inhalation.
- 5.2.4 **Receptor** – Receptors are defined as anything that can be affected by a source such as human beings, flora and fauna, other living organisms, groundwater and surface water, physical systems and built structures.
- 5.2.5 Some of the above, such as groundwater, surface water, flora, and fauna can be considered as both pathways and receptors.
- 5.2.6 A risk may be considered present if all three of the above exist and thereby form a “**pollutant linkage**”.

5.3 Outline Conceptual Site Model

- 5.3.1 As part of this Phase I Preliminary Risk Assessment, the following potential sources, pathways and receptors have been considered and are discussed below.

Potential Sources (on and off site):

- 5.3.2 The following are potential sources of contamination that have been considered: -

- Made Ground / reworked soils and rock beneath the site associated with construction and demolition on site and of the surrounding area.

- Potential for contamination to have occurred at the site as a result of historical and contemporary land uses and processes on the site and within influencing of the distance.
- Potential for mobile and leachable contamination at the site associated with historical and contemporary land uses and processes both on site and within influencing of the distance.
- Potential for volatile and semi-volatile contamination at the site associated with historical and contemporary land uses and processes both on site and within influencing of the distance.
- Historic electrical substations on the site and within influencing of the distance.
- Potential for hazardous ground gasses associated with any Made Ground, landfill sites and other areas of potentially infilled land both on site and within influencing distance of the site.

Potential Pathways

5.3.3 The following potential pathways have been identified at the site:

- Ingestion of contaminated soils.
- Inhalation of site generated particulates.
- Dermal contact with contaminated materials.
- Ingestion of home grown produce.
- Inhalation of hazardous ground gasses.
- Build-up of hazardous ground gasses in confined spaces.
- Groundwater.
- Surface water courses within influencing of the distance.

Potential Receptors

5.3.4 The following potential receptors have been identified:

- Current site end users.
- Future site end users.
- Construction workers.
- Members of the public and neighbouring site users.
- Neighbouring land.
- Aquifers and drinking water.
- Surface water courses within influencing of the distance.
- Flora and fauna.
- Other ecosystems.

5.4 Preliminary Risk Assessment

- 5.4.1 The Preliminary Risk Assessment has been evaluated using a probability / consequence matrix, which is provided in Appendix E.
- 5.4.2 The proposed development comprises construction of a new 94m² B2/B8 (General Industrial / Storage and Distribution) unit within the established Globe Industrial Estate, which will include the removal of the existing mast.
- 5.4.3 The underlying geology of the site and surrounding area is indicated to be Till overlying Mudstone which are of very low to medium permeability respectively.
- 5.4.4 The following risk assessment has been based on the above information and the proposed development as detailed in Section 2.0.
- 5.4.5 The discussion below assesses the likelihood of potential Contaminants of Concern (CoC's) with a justification on whether they would likely be present.
- 5.4.6 The CSM in Table 5.1 then provides a risk rating for the site.

Land Contamination

- 5.4.7 From the information available, the site itself has had some historical use. It is therefore likely that Made Ground will be present beneath the site associated with past construction and demolition on site and the surrounding neighbourhood, and site generated processes. Therefore, the probability for heavy metals, metalloids & inorganics, and PAH to be present on or beneath the site is considered to be **likely**.
- 5.4.8 Historical and contemporary land uses likely to produce mobile, organic and leachable contamination both on the site and within influencing distance have been identified. Considering the distances between the features and the site, and the variable permeability of the underlying geology beneath the site, the probability for mobile, organic and leachable contamination to be present at the site is considered to be **likely**.
- 5.4.9 Historical and contemporary land uses likely to produce volatile contamination (VOC's & SVOC's) within influencing distance have been identified. Considering the distances between the features and the site, and the variable permeability of the underlying geology beneath the site, the probability for VOC's & SVOC's to be present at the site is considered to be **low likelihood**.
- 5.4.10 There is one electric substations within influencing distance of the site which may be a source of Polychlorinated Biphenyls contamination (PCB's). Further details are given below.
 - Substation located approximately 123m to the south, first observed on the 1963 map.
- 5.4.11 This predate the 1981 ban on PCB's.
- 5.4.12 Considering the distance between the feature and the site, the probability for PCB contamination at the site is **unlikely**.
- 5.4.13 It is possible that further electric substations or former electric substations are present within influencing distance to the site associated with the surrounding area that have not been identified on the historical maps.
- 5.4.14 Asbestos fibres and Asbestos Containing Materials (ACM's) could be present within any Made Ground and or shallow natural soils beneath the site as a result of historic site uses, and phases of construction

and demolition. Therefore, the probability for ACM's to be present at the site is considered to be **low likelihood**.

- 5.4.15 Based on the above, the site history, and the environmental information available, the potential contaminants identified on this site include heavy metals, metalloids & inorganics, PAH's; leachable contamination, hydrocarbons & organic contamination; volatiles; and asbestos, and the risk to human health is considered to be **Moderate** at this stage.

Hazardous Ground Gases and Vapours

- 5.4.16 There is one historical landfill site, located 21m northwest and at in the recessed channel of the railway.

- 5.4.17 There are four areas of potentially infilled land, relating to:

- Unknown filled ground, dated 1992, located 177m west
- Unknown filled ground, dated 1992, located 215m southeast
- Potentially infilled reservoir (later site of filter beds), located 186m northwest, last mapped in 1891
- Potentially infilled reservoir, located 211m northwest; last mapped in 1976

- 5.4.18 Considering the distances between the features and the site, and the variable permeability of the underlying geology beneath the site, the probability of hazardous gases being present beneath the site is likely, and therefore the risk from hazardous ground gases is considered to be **Moderate**.

- 5.4.19 Landmark indicates that the site is within a lower probability radon area, as less than 1% of homes are above the action level. Therefore, no radon protection measures are necessary in the construction of new dwellings or extensions.

Groundwater

- 5.4.20 The Environment Agency aquifer classification scheme indicates that the superficial aquifer designation for the site is classed as Secondary Undifferentiated aquifer and the bedrock aquifer designation as Secondary A aquifer.

- 5.4.21 The potential contaminants identified on this site include heavy metals, metalloids and inorganics; PAH's; leachable contamination, hydrocarbons & organic contamination; and volatiles.

- 5.4.22 Based on the above, the environmental information available, and considering the variable permeability of the underlying geology, the absence of the nearest potable groundwater abstraction point and associated SPZ, the probability for contamination at the site to impact the groundwater is unlikely, and therefore the risk to groundwater is considered to be **Very Low** at this stage.

Surface Water

- 5.4.23 The nearest surface watercourse to the site is the Bolton & Bury Canal located 236m northwest of the site.

- 5.4.24 The potential contaminants identified on this site include heavy metals, metalloids and inorganics; PAH's; leachable contamination, hydrocarbons & organic contamination; and volatiles.

- 5.4.25 Based on the above, the environmental information available, and the proximity of the nearest surface water feature, the probability for contamination at the site to impact the surface water courses is unlikely, and therefore the risk to surface water courses is considered to be **Very Low** at this stage.

Plants and Native Grasses

- 5.4.26 Any plants that may be grown at the site in areas of landscaping may potentially be at risk from phytotoxic elements in any artificial soils beneath the site.
- 5.4.27 Based on the above, the site history, and the environmental information available, the potential contaminants identified on this site may include heavy metals, metalloids & inorganics, the risk to plants is considered to be **Very Low** at this stage.

Water Supply / Plastic Pipes

- 5.4.28 Any organic contamination present in the soils or groundwater beneath the site would pose a risk of premature failure to below ground services via chemical reaction.

Preliminary Conceptual Site Model

- 5.4.29 From the above information a CSM has been produced showing the preliminary conceptual model and potential pollutant linkages for the site and is presented overleaf in Table 5.1: Preliminary Conceptual Site Model and Potential Pollutant Linkages.
- 5.4.30 At this stage only contaminants of concern that are considered potentially present from the information available have been included in the CSM.

Table 5.1: Preliminary Conceptual Site Model and Potential Pollutant Linkages

Potential Sources	Contaminants of Concern	Potential Pathway	Potential Receptor	Potential Pollutant Linkage	Probability	Consequence	Risk Classification	Action / Mitigation / Justification
Made Ground both on site and within influencing distance of the site	Heavy metals, sulphates and inorganics PAH's	Ingestion Inhalation Dermal Contact	Human health Including current site users, future site users	Considered potentially active	Unlikely	Medium	Very low	Site to be completely covered by hardstanding, thus breaking the pollutant linkage. No further action.
Current and former land uses both on site and within influencing distance of the site	Asbestos Mobile organic contamination SVOC's and VOC's		Human health Construction workers	Considered potentially active	Likely	Medium	Moderate	Site investigation to confirm presence, type and extent of any contamination beneath the site.
			Human health Neighbouring residents	Considered potentially active	Low likelihood	Medium	Low to Moderate	Site investigation to confirm presence, type and extent of any contamination beneath the site.
Landfill sites Potentially infilled Land (ponds, quarries, reservoirs etc) Made Ground Natural organic soils Coal mining Fuel Stations (on and off-site sources)	Hazardous ground gases including CO ₂ , CH ₄ CO, H ₂ S Vapours	Inhalation Explosion	Human health Including current site users, future site users, neighbouring residents and constructions workers Buildings	Considered potentially active	Likely	Severe	Moderate	Site investigation to install gas monitoring wells with subsequent monitoring in accordance with CIRIA 665 should be carried out at the site.

Potential Sources	Contaminants of Concern	Potential Pathway	Potential Receptor	Potential Pollutant Linkage	Probability	Consequence	Risk Classification	Action / Mitigation / Justification
Made Ground on site Current and former land uses on site	Heavy metals, sulphates and inorganics PAH's Mobile organic contamination SVOC's and VOC's Leachable contamination	Lateral and vertical migration and leaching of contaminants into local groundwater	Underlying Aquifer (Potable water)	Considered potentially active	Unlikely	Mild	Very low	No further action, however, if Made Ground or any visual or olfactory evidence of contamination is encountered on site then this risk will need to be reassessed.
Made Ground on site Current and former land uses on site	Heavy metals, sulphates and inorganics PAH's Mobile organic contamination SVOC's and VOC's Leachable contamination	Lateral and vertical migration and leaching of contaminants into surface water bodies via permeable strata and features.	Local water courses and associated flora and fauna	Considered potentially active	Unlikely	Mild	Very low	No further action
Made Ground beneath the site Current and former site uses	Phytotoxic elements	Plant uptake	Plants and vegetation	Considered potentially active	Unlikely	Minor	Very low	Site to be completely covered by hardstanding, thus breaking the pollutant linkage. No further action.

6.0 PRELIMINARY GEOTECHNICAL ASSESSMENT

6.1 General

- 6.1.1 The underlying shallow geology is likely to consist of Till overlying Pennine Middle Coal Measures Formation which generally comprise clay and mudstone with coal present respectively.
- 6.1.2 Made Ground may also be present on site.
- 6.1.3 Based upon the information reviewed, a list of potential geotechnical risks has been outlined below in Table 6.1: Potential Geotechnical Risks, which presents a summary of the likely geotechnical risks potentially present at the site.

Table 6.1: Potential Geotechnical Risks

Features of Concern	Geotechnical Consideration	Geotechnical Risk to Proposed Development	Likelihood
Made Ground	Any potential Made Ground beneath the site.	Made Ground can cause total and differential settlement of any new structures.	Likely
Trees and vegetation	Large mature trees on site or within close proximity to the site boundaries.	Tree roots have the potential to cause clay soils to shrink causing settlement of new structures.	Unlikely
Shrinkage and expansion of clay soils	Clay soils beneath the site.	Potential for shrinkage and / or heave of clay soils causing damage to new structures.	Possible
Groundwater ingress	Shallow groundwater beneath the site.	Shallow ground water can have an impact on construction and foundation excavations. Pumping and / or dewatering may be required.	Possible
Existing / former foundations and underground structures	New buildings may be situated upon the sites of former demolished buildings or buildings that will be demolished as part of the proposed development.	Uneven founding, inconsistent ground conditions, and unsuitable bearing capacity for new structures.	Likely
Aggressive ground	Chemical content of the soils beneath the site.	Chemically aggressive ground may have the potential to attack buried concrete.	Likely
Soft / loose / weak soils and / or rock beneath the site	Unsuitable founding strata beneath the site.	Soft and lose soils or weak rock may be in adequate to found on. A suitable foundation option should be selected based on the actual ground conditions beneath the site.	Possible
Embankments / Slopes / Retaining Walls	Unstable slopes and embankments. Failing retaining walls.	Collapse onto or into any new developments. Slope failure beneath development.	Unlikely
Shallow mine workings beneath the site	Coal seams or mine entries present on or beneath the site which may have been worked in the past. Non coal related mining.	Worked mine seams or areas of mineral extraction leave voids underground that have the potential to settle when new loads are placed above them.	Possible
Ground Dissolution	Dissolution of carbonaceous geology beneath the site.	Carbonaceous ground beneath the site can dissolve over time with groundwater percolating through causing sink holes giving rise to settlement or complete collapse of structures.	Unlikely
Brine Extraction	Areas of brine extraction beneath the site at shallow depths.	Affected areas may leave voids underground that have the potential to settle when new loads are placed above them.	Negligible

6.2 Discussion

Structures

- 6.2.1 The nature and distribution of geotechnical properties of the near surface strata have not been fully identified within this study, therefore it is not possible at this stage, to give meaningful advice as to the type, nature, and construction of any foundations for the proposed development.
- 6.2.2 A suitable geotechnical site investigation should be carried out at the site to confirm ground conditions, geotechnical parameters, details of the groundwater regime, and other general site details to facilitate suitable foundation and substructure design.

Sustainable Drainage

- 6.2.3 In accordance with National Planning and Policy Framework (NPPF) and Local Planning Guidance, the Local Planning Authority (LPA) will require that surface water drainage from the proposed development complies with current design practices for Sustainable Drainage Systems (SuDS) construction of separate drainage systems for foul and surface water. Surface water shall be required to be attenuated to Greenfield runoff rates or better and attenuation up to the 1 in 100 year storm event plus 40% for climate change will be required on site.
- 6.2.4 Based on the indicative ground conditions encountered it is **unlikely** that soakaways would be suitable at the site, however the presence and thickness (if present) of Made Ground at the site may result in sustainable drainage not being practical or feasible. If sustainable drainage is to be considered, it is recommended that soak-away testing is carried out in accordance with BRE 365 at the site to establish the sites suitability for sustainable drainage.

7.0 CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

Environmental

- 7.1.1 A review of the preliminary information reveals that future end users of the site are potentially at **Very Low** risk of being affected by contamination in soils and / or groundwater beneath this site.
- 7.1.2 Risks to construction workers from the site are considered to be **Moderate** at this stage.
- 7.1.3 Risks to neighbouring residents from the site are considered to be **Low to Moderate** at this stage.
- 7.1.4 The risks of hazardous ground gasses affecting the site are considered to be **Moderate** at this stage.
- 7.1.5 No radon protection measures are necessary in the construction of new dwellings or extensions.
- 7.1.6 The risks to drinking water and groundwater are considered to be **Very Low** at this stage.
- 7.1.7 The risks to surface waters are considered to be **Very Low** at this stage.
- 7.1.8 Risks to plants and native grasses are considered to be **Very Low** at this stage.

Geotechnical

- 7.1.9 The nature and distribution of geotechnical properties of the near surface strata have not been fully identified within this study, therefore it is not possible at this stage, to give meaningful advice as to the type, nature, and construction of any foundations for the proposed development.
- 7.1.10 Inadequately designed buried concrete may be at risk from potentially elevated sulphates and low pH in the soils and groundwater beneath the site.
- 7.1.11 The site is considered to be affected shallow coal mining. Therefore, risks from shallow coal mining are considered to be **Low to Moderate** at this stage.
- 7.1.12 The site is not considered to be affected by ground dissolution. Therefore, risks from ground dissolution are considered to be **Very Low** at this stage.
- 7.1.13 Based on the indicative ground conditions identified it is unlikely that sustainable drainage would be suitable at the site, the presence and thickness (if present) of Made Ground and Till at the site may result in sustainable drainage not being practical or feasible. If sustainable drainage is to be considered, it is recommended that soak-away testing is carried out in accordance with BRE 365 at the site to establish the sites suitability for sustainable drainage.

7.2 Recommendations

- 7.2.1 It is recommended that a suitable combined phase II environmental and geotechnical site investigation is carried out at the site to establish the presence, type and nature of any contamination at the site and provide a Generic Quantitative Risk Assessment (GQRA); and, to identify the ground conditions and provide details of their engineering properties in order to facilitate foundation design for the proposed development; and, to establish the potential risks from shallow coal mining.
- 7.2.2 It is recommended that the above conclusions and recommendations are agreed in principle with the Local Planning Authority (LPA) to gain their approval prior to commencement of the development to avoid unnecessary complications or delays at a later stage.

7.3 Other Considerations

Soakaways

- 7.3.1 In accordance with National Planning and Policy Framework (NPPF) and Local Planning Guidance, the LPA will require that surface water drainage from the proposed development complies with current design practices for Sustainable Drainage Systems (SuDS) construction of separate drainage systems for foul and surface water.
- 7.3.2 Infiltration testing should be considered to determine the suitability for sustainable drainage at the site.

Plastic Water Pipes

- 7.3.3 Any organic contamination present in the soils or groundwater beneath the site would pose a risk of premature failure to below ground services via chemical reaction.
- 7.3.4 Any subsequent Phase II Site Investigation would be primarily concerned with human health risk assessment.
- 7.3.5 Considerations should be given to specific sampling and chemical analysis of the materials that any plastic water supply pipes will be laid in.
- 7.3.6 It is also likely that the water utilities provider will require their own risk assessment to be completed.

Radon

- 7.3.7 Radon protection measures are not required at this site.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

Section 1 – Mining activity and geology

Past underground mining

Colliery	Seam	Mineral	Coal Authority reference	Depth (m)	Direction to working	Dipping rate of seam worked (degrees)	Dipped direction of seam worked	Extraction thickness (cm)	Year last mined
unnamed	ROGER	Coal	3Z30	98	Beneath Property	9.5	South-East	190	1883
unnamed	RAMS	Coal	3YQV	127	Beneath Property	9.5	South-East	170	1893

Probable unrecorded shallow workings

Yes.

Spine roadways at shallow depth

No spine roadway recorded at shallow depth.

Mine entries

None recorded within 100 metres of the enquiry boundary.

Abandoned mine plan catalogue numbers

The following abandoned mine plan catalogue numbers intersect with some, or all, of the enquiry boundary:

NW1556	3428A	16820
NW1060	3001A	NW983

Please contact us on 0345 762 6848 to determine the exact abandoned mine plans you require based on your needs.

Outcrops

No outcrops recorded.

Geological faults, fissures and breaklines

No faults, fissures or breaklines recorded.

Opencast mines

None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations

None recorded within 50 metres of the enquiry boundary.

Remediated sites

None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

Section 3 – Licensing and future mining activity

Future underground mining

None recorded.

Coal mining licensing

None recorded within 200 metres of the enquiry boundary.

Court orders

None recorded.

Section 46 notices

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Section 4 – Further information

The following potential risks have been identified and as part of your risk assessment should be investigated further.

Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

MINE GAS: Please note, if there are no recorded instances of mine gas within 500m of the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

Development advice

The site is within an area of historical coal mining activity. Should you require advice and/or support on understanding the mining legacy, its risks to your development or what next steps you need to take, please contact us.

For further information on specific site or ground investigations in relation to any issues raised in Section 4, please call us on 0345 762 6848 or email us at groundstability@coal.gov.uk.

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk**.

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Opencast mines

Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips

Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations

Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites

Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence

Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas

Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded.

Mine water treatment schemes

Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining

Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing

Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders

Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices

Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices

Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land

Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

The map highlights any specific surface or subsurface features within or near to the boundary of the site.

APPENDIX E

RISK PROBABILITY MATRIX

	There is a pollutant linkage and an event that either appears very likely in the short term and almost inevitable in the long term, or there is evidence at the receptor or harm or pollution.	<i>Elevated concentrations of toxic contaminants are present in soils in the top 0.5m in a residential garden.</i> <i>Ground/groundwater contamination could be present from chemical works, containing a number of USTs, having been in operation on the same site for over 50 years</i>
	There is a pollutant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.	<i>Elevated concentrations of toxic contaminants are present in soils at depths of 0.5-1.0m in a residential garden, or the top 0.5m in public open space.</i> <i>Ground/groundwater contamination could be present from an industrial site containing a UST present between 1970 and 1990. The tank is known to be single skin. There is no evidence of leakage although there are no records of integrity tests.</i>
	There is a pollutant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.	<i>Elevated concentrations of toxic contaminants are present in soils at depths >1m in a residential garden, or 0.5-1.0m in public open space.</i> <i>Ground/groundwater contamination could be present on a light industrial unit constructed in the 1990s containing a UST in operation over the last 10 years – the tank is double skinned but there is no integrity testing or evidence of leakage.</i>
	There is a pollutant linkage but circumstances are such that it is improbable that an event would occur even in the very long term.	<i>Elevated concentrations of toxic contaminants are present below hardstanding.</i> <i>Light industrial unit <10 yrs old containing a double skinned UST with annual integrity testing results available.</i>

	Highly elevated concentrations likely to result in “significant harm” to human health as defined by the EPA 1990, Part 2A, if exposure occurs. A Category 1: Human Health risk is present. Equivalent to EA Category 1 pollution incident including persistent and/or extensive effects on water quality; leading to closure of a potable abstraction point major impact on amenity value or major damage to agriculture or commerce. Major damage to aquatic or other ecosystems, which is likely to result in a substantial adverse change in its functioning or harm to a species of special interest that endangers the long - term maintenance of the population. Catastrophic damage to crops, buildings or property.	<i>Significant harm to humans is defined in circular 01/2006 as death, disease*, serious injury, genetic mutation, birth defects or the impairment of reproductive functions.</i> <i>Major fish kill in surface water from large spillage of contaminants from site.</i> <i>Highly elevated concentrations of List I and substances present in groundwater close to small potable abstraction (high sensitivity).</i> <i>Explosion, causing building collapse (can also equate to immediate human health risk if buildings are occupied).</i>
	Elevated concentrations which could result in “significant harm” to human health as defined by the EPA 1990, Part 2A if exposure occurs. A Category 2: Human Health risk is present. Equivalent to EA Category 2 pollution incident including significant effect on water quality; notification required to abstractors; reduction in amenity value or significant damage to agriculture or commerce. Significant damage to aquatic or other ecosystems, which may result in a substantial adverse change in its functioning or harm to a species of special interest that may endanger the long-term maintenance of the population. Significant damage to crops, buildings or property.	<i>Significant harm to humans is defined in circular 01/2006 as death, disease* serious injury, genetic mutation, birth defects or the impairment of reproductive functions.</i> <i>Damage to building rendering it unsafe to occupy e.g. foundation damage resulting in instability.</i> <i>Ingress of contaminants through plastic potable water pipes.</i>
	Exposure to human health unlikely to lead to “significant harm”. A Category 3 Human Health risk is present. Equivalent to EA Category 3 pollution incident including minimal or short lived effect on water quality; marginal effect on amenity value, agriculture or commerce Minor or short lived damage to aquatic or other ecosystems, which is unlikely to result in a substantial adverse change in its functioning or harm to a species of special interest that would endanger the long-term maintenance of the population Minor damage to crops, buildings or property.	<i>Exposure could lead to slight short - term effects (e.g. mild skin rash).</i> <i>Surface spalling of concrete.</i>
	No measurable effect on humans.A Category 4: Human Health risk is present. Equivalent to insubstantial pollution incident with no observed effect on water quality or ecosystems. Repairable effects of damage to buildings, structures and services	<i>The presence of contaminants at such concentrations that protective equipment is required during site works.</i> <i>The loss of plants in a landscaping scheme.</i> <i>Discolouration of concrete.</i>

Very high risk (VH)	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realized, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required.
High risk (H)	Harm is likely to arise to a designated receptor from an identified hazard. Realization of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short-term and are likely over the longer-term.
Moderate risk (M)	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer-term.
Low risk (L)	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realized, would at worst normally be mild.
Very low risk (VL)	There is a low possibility that harm could arise to a receptor. In the event of such harm being realized it is not likely to be severe.
