

Phase 1 Contaminated Land Assessment

Risk: Moderate/Low to Moderate

Given the apparent long term agricultural use of the Site there is the potential for some residual contamination to be present within the subsurface which could impact future Site users, primarily in garden areas. The Site is also positioned within a development high risk coal mining area, with a potential associated mine gas risk (Worms Eye, 2023). It is therefore recommended that a proportionate programme of site investigation works be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks.

Report prepared for
Mohammed Amirinejad

1. Executive Summary

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site. GeoSmart are providing consultancy and professional opinion based upon our collation, interpretation and assessment of information contained within an Envirocheck report, and other sources where expressly stated (i.e. site visits, photographs, and anecdotal evidence). It is acknowledged that the risk assessment findings are based on documentary sources of information alone.

Site analysis

1. Probability/likelihood of a contaminant hazard at the Site	High likelihood	
	Likely	
	Low likelihood	
	Unlikely	
2. Potential severity/consequence of any impacts	Severe	
	Medium	
	Mild	
	Minor	
3. Overall land quality risks posed by the Site	Very high	
	High	
	Moderate	
	Moderate/low	
	Low	
	Very low	

Summary of existing and proposed development

The Site is currently occupied by an area of vacant grassland. Development proposals comprise the construction of two residential one-bedroom semi detached houses, with parking and garden areas.

Environmental Setting

The underlying superficial geology consists of Till, Devensian which is classified as a Secondary (undifferentiated) Aquifer; the bedrock geology consists of the Pennine Middle Coal Measures Formation which is classified as a Secondary (A) Aquifer.

There are no significant surface water features within 250 m of the Site.

There are no environmentally sensitive land uses within 500 m of the Site.

Site History

The Site was first developed in the mid to late 1800s with assorted buildings labelled as Cams Acre, which appears to have been an old farm. Some additional development occurred in the south of the Site during the 1950s. In the 1970s the Cams Acre buildings were demolished; the Site has remained vacant to the present day. The surrounding area has been primarily residential and commercial but has included potentially infilled reservoirs, ponds. A former brickfield was located c. 150 m to the north-east of the Site.

Radon

The Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).

Coal Mining

The Site is located within a Mining Remediation Authority Development High Risk Area. A coal mining risk assessment for the Site was completed by Worms Eye in September 2023. The CMRA identified potential ground stability risks associated with legacy mine workings, plus a low risk posed by mine gas (potentially constrained by the presence of Till deposits). Ground investigation was recommended to further assess both stability and mine gas risks. The CMRA findings appear to have been approved by the Mine Remediation Authority. As such, the recommendations within this report should be implemented.

Summary of Conceptual Site Model (CSM)

Source of Contamination

Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils

Limited potential for volatile organic contaminants to be present within the subsurface soils

Potential for asbestos containing materials within the subsurface soils

Limited potential for elevated methane and carbon dioxide to be present within the sub-surface soils

Receptors

Human Health

Human Health (pathway)

Dermal contact, ingestion & inhalation of soils & soil dust

Consumption of home grown produce

Ingress into water supply pipework and subsequent water ingestion

Liberation of sub surface ACMs and inhalation of asbestos fibres

Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation or an explosion

Preliminary Risk Assessment

Overall, the preliminary risk classification of the Site in relation to the proposed redevelopment is considered to be Moderate/Low to Moderate.

Recommendations / Next Steps

Phase 2 intrusive investigation

Given the apparent long term agricultural use of the Site there is the potential for some residual contamination to be present within the subsurface which could impact future Site users, primarily in garden areas. The Site is also positioned within a coal mining development high risk area, with a potential associated mine gas risk (Worms Eye, 2023). It is therefore recommended that a proportionate programme of site investigation works be undertaken in order to establish the presence or absence of any ground contamination and to enable a quantitative assessment of the associated environmental risks.

2. Introduction

2.1 Background

The study site (from herein known as 'the Site') is situated at land between Harper Fold Road and Canute Street, in Radcliffe. A location plan of the Site is shown in Section 2.5. A proposed development plan of the Site is shown in Section 2.6.

GeoSmart was commissioned by Mohammed Amirinejad in May 2026 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested to support Planning Application Reference 72750.

The proposed development is for the construction of two residential one-bedroom semi detached houses, with parking and garden areas.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 4.4 for details.

2.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

2.3 Report contents

This report is divided into two sections, as described below:

Section	Content	Purpose
Section 3: LAND QUALITY ASSESSMENT	A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations	To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present
Section 4: SUPPORTING INFORMATION	A collection of site specific information on which the land quality assessment is based	To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments

2.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

2.5 Site location plan & topography maps

2.6 Proposed Site development plan

3. Land quality assessment

3.1 Site details

Site name:	Land at Harper Fold Road & Canute Street	Current land cover:	100% softstanding
Current use:	Unmanaged grassland		
Proposed use:	Residential with garden (two units)	Site area:	0.05 ha

3.2 Conceptual understanding (potential sources of contamination)

Site history (historical land use taken within 250m radius of the Site boundary)	Date	Description of land use	
		On-Site	Off-Site
	1850	The Site and wider area is undeveloped	
	1893	The Site is developed with buildings in the north and east of the Site, labelled as 'Cams Arce' which extend off-Site to the north and east. The Council's Environmental Protection team have stated that Cams Acre is assumed to be an Old Farm (see section 3.4 for further details).	There is extensive residential development to the north, west and north east of the Site. There is a modest pond c. 65 m south west, a football ground c 90 m north, a cricket ground c. 175 m north east and reservoirs c. 170 m south west and c. 175 m north of the Site.
	1894 - 1895	No discernible change	
	1909	No discernible change	The football ground to the north west is no longer present. There is a brick field c. 150 m north east of the Site.
1910	No discernible change		

POTENTIAL SOURCES OF CONTAMINATION

Source description
The land use history suggests that there is the potential for contamination to have occurred <u>on-Site</u> relating to the following: Suspected farm buildings - Bulk storage of fuels and/or miscellaneous chemicals. - Miscellaneous small scale fuel and chemical spills (i.e., fuels used for heating/agricultural machinery/other vehicles, oils and lubricants, herbicides/pesticides, fertilisers, paints/thinners, creosote, etc.). - Potential for localised/historical deposition of domestic / agricultural waste materials. - Made Ground associated with former development/demolition activities. - Animal effluent from the housing of livestock within the on-site buildings. - Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.

LOW LIKELIHOOD

PROBABILITY OF CONTAMINATION

3.2 Conceptual understanding (potential sources of contamination)

Site history (historical land use taken within 250m radius of the Site boundary)	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LOW LIKELIHOOD	PROBABILITY OF CONTAMINATION
		On-Site	Off-Site				
	1929	No discernible change	The brick field is no longer present and has been redeveloped with multiple smaller structures. There has been development of two small buildings adjacent to the south and also a church c. 30 m south west of the Site.		The land use history suggests that there is the potential for contamination to have occurred <u>off-Site</u> relating to the following: Potentially infilled reservoirs and ponds Made Ground associated with former infilling activities. Any Made Ground/fill materials may contain a variety of inorganic and organic contaminants and could give rise to the generation of bulk gases and also leachate. Despite the presence of former ponds / reservoirs which appear to have been subsequently infilled, given the small scale of the pond, the distance to the reservoirs and also the time that has passed since any potential infilling occurred, it is considered unlikely that there will be an appreciable gas source which could impact future Site users. Therefore this potential source will not be carried forward into the risk assessment.		
	1930 - 1938	No discernible change					
	1955 - 1957	Two small structures have been built in the south west of the Site.	The buildings in the former brick field are no longer present and the area has been redeveloped with residential dwellings.				
	1965	No discernible change					
	1970	The main structures in the north and east of the Site have been demolished, leaving only the two smaller structures in the south west of the Site present.	No discernible change				
1975 - 1976	The two smaller structures in the south west have been demolished. The Site is labelled to be vegetated, including trees. The east of the Site is now bounded by a road.	The church to the south west is now labelled as a community centre. The pond to the south west is no longer present. There has been extensive residential development in this area, including the area adjacent to the south of the Site. Both former reservoirs are no longer present.					

3.2 Conceptual understanding (potential sources of contamination)

Site history (historical land use taken within 250m radius of the Site boundary)	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LOW LIKELIHOOD	PROBABILITY OF CONTAMINATION
		On-Site	Off-Site				
	1980 - 1999	No discernible change			See previous pages		
	2000 (aerial imagery)	Aerial imagery shows the Site is undeveloped and is covered with grass.	No discernible change				
	2003 - 2005 (aerial imagery)	No discernible change					
	2013 (aerial imagery)	No discernible change	There has been development adjacent to the north of the Site. From present day information, this is likely to be the United Utilities infrastructure (underground tank and associated sewerage) which is currently present (see photographs in Section 4.2).				
2017 - 2025 (aerial imagery)	No discernible change						

3.2 Conceptual understanding (potential sources of contamination)

Current land use	The Site is currently disused grassland.			POTENTIAL SOURCES OF CONTAMINATION	The Site's current use is unlikely to have given rise to significant land contamination.	UNLIKELY
Neighbouring industrial land uses <i>(see environmental data report in Section 4.3 for full listing)</i>	There are one or more potentially contaminative land uses are located within 100 m of the Site:				Despite the presence of potential contaminative activities in the area surrounding the Site, since none occur within close proximity (i.e., within a 50 m radius of the Site) they are unlikely to pose a significant contamination hazard in relation to the Site itself. Contemporary trade directory entries include: Balmoral Carpets c. 60 m west (inactive) - carpet, curtain & upholstery cleaners Cardaxis c. 60 m north west (active) - printers	UNLIKELY
	Distance from Site	Number of active industrial land uses	Number of inactive industrial land uses			
	1 - 50 m	0	0			
	51 - 100m	1	1			
	Nr	Nearest distance	Land use / permitted activity / authorisation			
	0	NA	Fuel station entries			
	0	NA	Points of interest (commercial services / manufacturing & production)			
	0	NA	Underground electrical cables			
	0	NA	Control of major accident hazards sites (COMAH)			
	0	NA	Notification of installations handling hazardous substances (NIHHS)			
	0	NA	Explosives sites			
	0	NA	Planning hazardous substance consents			
	0	NA	Planning hazardous substance enforcements			
0	NA	Sites determined as Contaminated Land under Part IIA of the Environmental Protection Act 1990				
0	NA	Records of Licensed Discharge Consents.				
0	NA	Integrated pollution prevention and control sites				
0	NA	Local Authority pollution prevention and control sites				
0	NA	Local Authority pollution prevention and control enforcements				
0	NA	Records of Category 3 or 4 Radioactive Substance Licences				

3.2 Conceptual understanding (potential sources of contamination)

EA recorded pollution incidents <i>(see environmental data report in Section 4.3 for full listing)</i>	No Environment Agency pollution incidents have been recorded within 250 m of the Site.	POTENTIAL SOURCES OF CONTAMINATION	No potential for gross contamination has been identified in relation to any pollution incidents occurring near to the Site.	NEGLIGIBLE	PROBABILITY OF CONTAMINATION
Landfills / waste sites <i>(taken within 500m radius of the Site boundary, see environmental data report in Section 4.3 for full listing)</i>	There are no BGS recorded landfills located within 500 m of the Site. There are one or more Environment Agency listed historical landfills located within 500 m of the Site. These include: Red Bank Landfill is located c. 300 m north east of the Site; the landfill received household waste from 1950. The last input date has not been provided. There are no registered landfills located within 500 m of the Site. There are no Local Authority listed historical landfills located within 500 m of the Site. The following areas of potentially infilled land are recorded within 250 m of the Site: Unknown filled ground, classified as 'water', was recorded c. 135 m west of the Site in 1850. Unknown filled ground, classified as 'water', was recorded c. 65 m south west, c. 140 m north, c. 165 m south, c. 185 m south west and c. 235 m south west of the Site in 1955. Unknown filled ground, classified as 'water', was recorded c. 175 m north west of the Site in 1910. Unknown filled ground, classified as 'non-water', was recorded c. 190 m south of the Site in 1992. The following other waste sites are registered within 250 m of the Site: 0 Records of registered waste transfer sites. 0 Records of registered waste treatment or disposal sites. 0 Records of licenced waste management facilities.		Despite the presence of a former landfill in the area surrounding the Site, given the appreciable distance to this feature (in excess of 250 m from the Site), combined with the presence of Till deposits across the local area, the landfill is unlikely to pose a significant contamination hazard in relation to the Site, and will therefore not be carried forward into the risk assessment. The potentially infilled land identified within the vicinity of the Site may pose a contamination hazard to the Site should relevant contaminant pathways exist. However, given the relatively small scale of the features, the moderate distance from the Site, the presence of Till deposits across the local area, and the time that has elapsed since potential infilling ceased, it is considered unlikely that any significant gas risks will be posed to the Site. Given the absence of any waste treatment, transfer or disposal sites within close proximity of the Site no associated contamination hazards have been identified.	UNLIKELY	

3.2 Conceptual understanding (potential sources of contamination)

Radon (see environmental data report in Section 4.3 for full listing)	According to current UK radon mapping the Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m ³).	POTENTIAL SOURCES OF CONTAMINATION	<1% of homes are at or above the UK radon action level (200 Bq/m ³).	UNLIKELY	PROBABILITY OF CONTAMINATION
--	---	------------------------------------	--	----------	------------------------------

3.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

Geology and Groundwater <i>(see the environmental data report in Section 4.3 for full details)</i>	British Geological Survey mapping indicates that the underlying superficial geology consists of Till, Devensian (TILLD) which comprises of diamicton and is classified as a Secondary (undifferentiated) Aquifer. British Geological Survey mapping indicates that the bedrock geology consists of the Pennine Middle Coal Measures Formation (PMCM) which comprises of mudstone, siltstone and sandstone and is classified as a Secondary (A) Aquifer. According to the GeoSmart Groundwater Flood Risk (GW5) Map (GeoSmart, 2026), the risk of groundwater flooding at the Site is 'negligible'. The Site does not lie within a groundwater Source Protection Zone (SPZ). There are no groundwater abstraction licences within 500 m of the Site.	POTENTIAL RECEPTORS	A Secondary (Undifferentiated) Aquifer is assigned in cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type. A Secondary (A) Aquifer comprises permeable layers capable of supporting water supply at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment is not considered necessary for the Site. The depth to groundwater beneath the Site is unknown. The absence of any groundwater abstractions does not necessarily indicate a low resource potential. Small scale abstractions, such as for private water supplies, may not be listed.	MEDIUM	POTENTIAL SEVERITY OF IMPACT
---	--	----------------------------	--	---------------	-------------------------------------

Superficial Geology (BGS, 2026)

Bedrock Geology (BGS, 2026)

3.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

Geohazards (see the environmental data report in Section 4.3 for full details)	The Site lies within an area of historical coal mining activity and is in a 'Development High Risk Area', also known as 'CON29M Coal and Brine Consultation Area'. There are no brine affected areas within 75 m of the Site. The following are located within 500 m of the Site: BGS recorded Mineral Sites Black Cat Colliery, a former opencast mine where clay and shale was extracted from Pennine Middle Coal Measures Formation, is located c. 245 m south east of the Site. Black Moss Brick Works, a former opencast mine where clay and shale was extracted from Pennine Middle Coal Measures Formation, is located c. 390 m west. Marsden Croft Brick Works, a former opencast mine where clay and shale was extracted from Devensian Till, is located c. 495 m north west. <u>Mining instability</u> (as a result of inconclusive coal mining) has been recorded on-Site. Limited artificial ground / Made Ground is anticipated on Site. There are no natural hazards (with a hazard rating of moderate or above) at or within 50 m of the Site.	POTENTIAL RECEPTORS	A coal mining risk assessment (CMRA) for the Site was completed by Worms Eye in September 2023 (in support of a previous planning application). This report included the following salient information: - An estimated 10m - 15m thickness of Till is present beneath the Site. - A recorded worked seam (Roger Seam) is recorded at a depth of 38 m below the Site level. The seam is c. 2 m thick. - Probably unrecorded shallow workings are mapped beneath the Site. - No mine entries are recorded within 100 m of the Site. - A fault is mapped directly below the Site. The CMRA identified potential ground stability risks associated with legacy mine workings, plus a low risk posed by mine gas (potentially constrained by the presence of Till deposits). Ground investigation was recommended to further assess both stability and mine gas risks. The CMRA findings appear to have been approved by the Mine Remediation Authority. The recommendations within the CMRA report should be implemented. The Site does not lie within an area of former brine working and is therefore unlikely to be affected by related ground stability issues. Multiple mineral sites are recorded within the local area; however, none of the identified sites are located within the immediate vicinity of the Site. The Site is mapped within an area of historic coal mining. BGS GeoIndex Onshore mapping does not have any artificial deposits recorded at the Site. However, former demolition / redevelopment works have occurred on-Site, which may have given rise to some Made Ground. It is further noted that the available survey level data for the Site shows that the Site ground elevations are up to c. 0.8 m higher than the surrounding pavement levels.	MEDIUM	POTENTIAL SEVERITY OF IMPACT
---	--	----------------------------	---	---------------	-------------------------------------

3.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

Surface water <i>(see the environmental data report in Section 4.3 for full details)</i>	There are no significant surface water features within 250 m of the Site. The Site lies within a Flood Zone 1 (low probability). There are no surface water abstraction licences within 500 m of the Site.	POTENTIAL RECEPTORS	No relevant surface water receptors have been identified.	NEGLECTIBLE	POTENTIAL SEVERITY OF IMPACT
Environmental designations <i>(see the environmental data report in Section 4.3 for full details)</i>	There are no environmentally sensitive land uses within 250 m of the Site.		No relevant environmentally designated sites/receptors have been identified.	NEGLECTIBLE	
Human receptors	Proposed residents/users of the Site plus neighbouring residences.		Human receptors are proposed to be present on Site.	SEVERE	

3.4 Regulator perspective

Consultation date	11/05/2026	Bury Metropolitan Borough Council
GeoSmart consultant	Jessica Bayliff	Sally Shaw
Consultation outcome	The local authority replied to a consultation request by GeoSmart. The Council declined to answer any queries relating to the Site that can be relied on other than through a formal chargeable environmental search. A review of the planning portal shows that comments from Environmental Protection has been made on the previous three applications for the Site (70477 (February 2024) and 71444 (December 2024) & 69590 (April 2023), which state the following: <i>"The site is currently a grassed area of public open space with United Utilities underground infrastructure present in the north of the site. Current uses in the surrounding area include housing, retail units, a community centre and a primary school. Previous uses at the site have included a collection of buildings known as Cams Acre (assumed to be an old farm) which was present on the site from prior to 1848 until the buildings were demolished at some point between the 1950s and 1976. Previous uses in the surrounding area have included infilled ponds and reservoirs, a brickfield, old coal pits and allotment gardens. The site is not located within 250m of a registered landfill and is not in close proximity to any major surface watercourses. The site is situated on the Middle Coal Measures Formation Secondary A Aquifer overlain by Glacial Till. As the site has previously been developed it is likely that deposits of made ground are present on the site. The site is not located within a Radon Affected Area.</i> <i>Due to the sensitivity of the proposed land use, as a minimum, a Desk Study and Preliminary Risk Assessment will be required. A coal mining risk assessment report has been submitted which recommends an intrusive investigation and gas monitoring is completed."</i>	

3.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
On- Site sources - Former agricultural use; Made Ground; potential for mine gases								
1	Potential for Inorganic and low volatility organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	Given the reported long term agricultural use of the Site, including previous phases of building construction and demolition, there is potential for some residual, localised contamination to be present within the sub surface which could impact future Site users, particularly in proposed garden areas.
2		Consumption of home grown produce	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	
3		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	
4		Building materials in direct contact with aggressive ground	PROP	Future Site buildings	MILD	UNLIKELY	VERY LOW RISK	Aggressive ground conditions are not specifically anticipated to be present.
5		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Till, Devensian (a Secondary (undifferentiated) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	There is a potential that any residual ground contamination present on-Site could impact the underlying groundwater, however, no widespread or significant soluble contamination is anticipated and it is assumed the superficial Till deposits are of low permeability / sensitivity - therefore contaminant loading onto the bedrock aquifer is likely to be low. It is also noted that the Site is not located within an SPZ and there are no licensed groundwater abstractions within 500 m of the Site.
6		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Pennine Middle Coal Measures Formation (a Secondary (A) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	

3.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
7	Potential for volatile organic contaminants to be present within the sub-surface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	Based on the Site's known land use history, including the time that has elapsed since the former agricultural use of the Site, a significant source of VOC contamination is considered to be unlikely.
8		Consumption of home grown produce	HH		MEDIUM	UNLIKELY	LOW RISK	
9		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	UNLIKELY	LOW RISK	
10		Migration of vapours to surface; inhalation indoors	HH		MEDIUM	UNLIKELY	LOW RISK	
11		Migration of vapours to surface; inhalation outdoors	HH		MEDIUM	UNLIKELY	LOW RISK	
12		Building materials in direct contact with aggressive ground	PROP	Future Site buildings	MILD	UNLIKELY	VERY LOW RISK	Aggressive ground conditions are not specifically anticipated to be present.
13		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Till, Devensian (a Secondary (undifferentiated) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	No widespread or significant soluble VOC contamination is anticipated on-Site and it is assumed that the superficial Till deposits are of low permeability / sensitivity; hence, contaminant loading onto the underlying aquifer is likely to be low; it is also noted that the Site is not located within an SPZ and there are no licensed groundwater abstractions within 500 m of the Site.
14		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Pennine Middle Coal Measures Formation (a Secondary (A) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	

3.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
15	Potential for asbestos containing materials within the subsurface soils	Liberation of sub surface ACMs and inhalation of asbestos fibres	HH	Future Site occupants	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	Given the age of the former Site buildings, asbestos-containing materials may have been present within the building fabric. Given the previous occurrence of demolition activity on-Site there is the potential for some residual asbestos in soil.
16	Potential for dissolved phase contaminants to be present within shallow groundwater	Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Till, Devensian (a Secondary (undifferentiated) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	No widespread or significant dissolved phase contamination is anticipated beneath the Site; it is also noted that the Site is not located within an SPZ and there are no licensed groundwater abstractions within 500 m of the Site.
17		Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Pennine Middle Coal Measures Formation (a Secondary (A) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	
18	Potential for elevated methane to be present within the sub-surface soils	Lateral and vertical migration into on-Site buildings; potential to cause an explosion	HH	On-Site properties and their occupants	SEVERE	LOW LIKELIHOOD	MODERATE RISK	Based on the prevailing conceptual understanding, any in-situ Made Ground present on-Site is considered unlikely to represent an appreciable source of ground gas. A coal mining risk assessment previously prepared for the Site (Worms Eye, 2023) has indicated the presence of a shallow worked coal seam beneath the Site plus an underlying fracture. The CMRA also identified 10 m - 15 m of Till deposits overlying the Coal Measures formation (the evidence for this thickness of material is unclear - there are no available BGS borehole logs local to the Site), which was considered to constrain possible mine gas risks. None-the-less, the CMRA recommended ground investigation to clarify the scale of any mine gas risks.
19		Lateral migration towards off-Site buildings; potential to cause an explosion	HH	Off-Site properties and their occupants	SEVERE	LOW LIKELIHOOD	MODERATE RISK	
20	Potential for elevated carbon dioxide to be present within the subsurface soils	Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation	HH	Occupants of on-Site buildings	SEVERE	LOW LIKELIHOOD	MODERATE RISK	
21		Lateral migration towards off-Site buildings; potential to cause asphyxiation	HH	Occupants of off-Site buildings	SEVERE	LOW LIKELIHOOD	MODERATE RISK	
22	Potential for radon within the subsurface	Lateral migration towards on-Site buildings; potential to cause long term health effects	HH	Occupants of on-Site buildings	MEDIUM	UNLIKELY	LOW RISK	The Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).
OVERALL RISK RATING (on-Site sources)							MODERATE/LOW TO MODERATE RISK	

3.6 Next Steps

✓	Phase 2 intrusive investigation	Given the apparent long term agricultural use of the Site there is the potential for some residual contamination to be present within the subsurface which could impact future Site users, primarily in garden areas. The Site is also positioned within a development high risk coal mining area, with a potential associated mine gas risk (Worms Eye, 2023). It is therefore recommended that a proportionate programme of site investigation works be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks. Further advice: Please contact info@geosmartinfo.co.uk for further information regarding the need for a Phase 2 investigation. For information on reputable site investigation companies, enquiries can be made directly to your local authority or via www.endsdirectory.com
---	---------------------------------	---

4. Supporting Information

The following supporting information is contained in this section:

Section	Content
4.1	Referenced materials used in the EnviroSmart reporting

Disclaimer

This report has been prepared by GeoSmart in its professional capacity as soil and water specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by GeoSmart solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to GeoSmart at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, GeoSmart may, by prior written agreement, agree to such release, provided that it is acknowledged that GeoSmart accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. GeoSmart accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against GeoSmart except as expressly agreed with GeoSmart in writing.

Important consumer protection information

This search has been produced by GeoSmart Information Limited, Suite 9-11, 1st Floor, Old Bank Buildings, Bellstone, Shrewsbury, SY1 1HU.

Tel: 01743 298100

Email: info@geosmartinfo.co.uk

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code

- provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
- sets out minimum standards which firms compiling and selling search reports have to meet
- promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals
- enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.

By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award up to £5,000 to you if the Ombudsman finds that you have suffered actual financial loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the Code.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs contact details:

The Property Ombudsman scheme

Milford House

43-55 Milford Street

Salisbury

Wiltshire SP1 2BP

Tel: 01722 333306

Fax: 01722 332296

Email: admin@tpos.co.uk

You can get more information about the PCCB from www.propertycodes.org.uk

Please ask your search provider if you would like a copy of the search code

Complaints procedure

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly. If you want to make a complaint, we will:

- Acknowledge it within 5 working days of receipt.
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
- Provide a final response, in writing, at the latest within 40 working days of receipt.
- Liaise, at your request, with anyone acting formally on your behalf.

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs): Tel: 01722 333306, E-mail: admin@tpos.co.uk.

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision. Complaints should be sent to:

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

4.4 Risk assessment methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

Classification	Definition
High likelihood	There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term.
Low likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.

Table B: Classification of consequence

Classification	Receptor	Definition	Examples
Severe	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance	High concentrations of cyanide on the surface of an informal recreation area
	Controlled waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource	Major spillage of contaminants from site into controlled water
	Property	Catastrophic damage to buildings/property	Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied)
	Ecology	A short-term risk to a particular ecosystem, or organism forming part of such eco-system	Potentially long term derogation of a designated site or protected species
Medium	Humans	Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)	Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria
	Controlled waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)	Leaching of contaminants from a site to a principal or secondary aquifer
	Property	Significant damage to crops, buildings, structures and services	Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability)
	Ecology	A significant change in a particular ecosystem	Death of a species within a designated nature reserve

Table B: Classification of consequence (continued)

Classification	Receptor	Definition	Examples
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk	Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria
	Controlled waters	Pollution of non-water resources	Pollution of non-classified groundwater
	Property	Damage to sensitive buildings/structures/services	Aggressive ground conditions leading to potential for long term degradation of buried concrete
	Ecology	Damage to the environment	Localised damage to aquatic habitat causing temporary relocation of certain species
Minor	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc.)	The presence of contaminants at such concentrations that protective equipment is required during site works
	Controlled waters	Potential minor release of contamination to local water features	Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality
	Property	Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve	The loss of plants in a landscaping scheme. Discolouration of concrete
	Ecology	Short term, localised damage may occur; consequences are spatially and temporally limited	Short term or localised disruption to in situ flora or fauna; no lasting effects

Table C: Risk classification (comparison of consequence and probability)

		Consequence (severity)			
		Severe	Medium	Mild	Minor
Probability	High likelihood	Very high risk	High risk	Moderate risk	Low risk
	Likely	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

Risk Key

Very High	High	Moderate	Moderate/Low	Low	Very Low
There is a high probability that severe harm could arise to a designated receptor from an identified hazard without appropriate remediation action	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action	It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely any harm would be mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild	The presence of an identified hazard does not give rise to the potential to cause harm to a receptor

4.5 Historical land use maps

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1956 - 1987

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan

Published 1964 - 1976

Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Lancashire And Furness

Published 1850

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

Published 1975

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan

Published 1980

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local Published 2025 Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).
