Subject: RE: Initial Consultation on Planning Application 68655

Hi Dean

I've discussed with colleagues and think that to ask for evidence that the booth will meet the emission concentration limit found in Table 4.1 of "Process Guidance Note 6/34(11), Statutory guidance for re-spraying of road vehicles Revised: July 2013", is to onerous as they do not meet the solvent usage required.

I therefore propose the following condition and wording:

The use of the spray booths hereby approved shall not commence unless and until the following information has been submitted to and approved in writing by the local planning authority:

- 1) Confirmation of the specification of the installed spraybooth and submission of the maintenance manual.

Comment: Details of the spray booths, which should be designed in line with the Best Available Techniques found in "Process Guidance Note 6/34(11), Statutory guidance for re-spraying of road vehicles Revised: July 2013".

For the avoidance of doubt, all paint spraying operations should be carried out in a totally enclosed booth under negative pressure so as to prevent fugitive emissions of odour and particulate matter. Thereafter, spray booths should be serviced and maintained in accordance with the manufacturers' recommendations so as to maintain the validity of the guarantee of emission concentration limit.

Please note any future odour complaints will be dealt with under the Statutory Nuisance Regulation (Environmental Protection Act 1990).

Reason. To protect the air quality in the locality pursuant to Policy EN7/1 - Atmospheric Pollution of the Bury Unitary Development Plan and Section 10 of the National Planning Policy Framework.

Let me know what you think.

Many thanks

Regards

Judith Scott
