

NOTICE OF PERMISSION IN PRINCIPLE

Town and Country Planning Act 1990 Town and Country Planning (Permission in Principle) (England) Order 2017 as amended

To:

Mr Steven Hartley
HP & DA Ltd
Swallow Barn
Lower Chapel Hill
Hurst Lane
Rawtenstall
BB4 8TB

On Behalf Of:

Mr S Bowman
The Manor House
Long Lane
Bury
BL9 5QT

PART 1 - Particulars of Application

Application Number: 71820

Date of Registration: 15/04/2025

Proposal:

Permission in principle for 6 no. dwellings

Location:

Land adjacent to Manor House, Long Lane,
Bury, BL9 5QT

PART 2 - Particulars of Decision

Bury Metropolitan Borough Council hereby give notice in pursuance of the provisions of the Town and Country Planning Act 1990 that permission in principle has been **GRANTED** for the carrying out of the development referred to in Part 1 hereof in accordance with the application and plans submitted.

The Principle of Permission hereby granted is for a period of 3 years from the date of this decision. This is the prescribed period as set out in the Town & Country Planning Act 199, Town and Country Planning (Permission in Principle) Order 2017 as amended. The "Notes to Applicant" below provides guidance on what the detailed proposals should include at the Technical Details Stage.

The following policies of the Bury Unitary Development Plan, National and Regional Government were considered relevant:

- | | |
|-------|---|
| H1/2 | H1/2 - Further Housing Development |
| H2/1 | H2/1 - The Form of New Residential Development |
| H2/2 | H2/2 - The Layout of New Residential Development |
| EN1/2 | EN1/2 - Townscape and Built Design |
| EN6/3 | EN6/3 - Features of Ecological Value |
| OL5/2 | OL5/2 - Development in River Valleys |
| HT2/4 | HT2/4 - Car Parking and New Development |
| SPD6 | Supplementary Planning Document 6 - Alterations and Extensions to Residential Properties. |
| SPD11 | Development Control Policy Guidance Note 11 - Parking Standards in Bury |
| JP-C2 | Digital Connectivity |

JP-C5	Streets For All
JP-C6	Walking and Cycling
JP-C8	Transport Requirements of New Development
JP-G1	Landscape Character
JP-G8	A Net Enhancement of Biodiversity and Geodiversity
JP-G9	The Green Belt
JP-H1	Scale of New Housing Development
JP-H3	Type, Size and Design of New Housing
JP-H4	Density of New Housing
JP-P1	Sustainable Places
JP-P2	Heritage
JP-S2	Carbon and Energy
JP-S4	Flood Risk and the Water Environment
JP-S1	Sustainable Development
NPPF	National Planning Policy Framework

This decision relates only to the Town and Country Planning Acts and does not include any consent or approval under any other enactment or under the Building Regulations. Any other consent or approval which is necessary must be obtained from the appropriate authority.

Applicant Plan Numbers:

Location plan Ref:SB.290325.B

NOTES TO APPLICANT

. United utilities response letter

United Utilities provides the following comments to support the Local Planning Authority in their determination of the planning application detailed above, and to direct the applicant to further sources of support and guidance on matters that might impact their proposal. The letter and Appendix should be read in their entirety. Should this proposal be approved, and a further application submitted for Technical Detail Consent, it is important to note that our response to a subsequent application will be based upon the information that is available at the time of response, and therefore, our position and advice may vary.

We strongly recommend that the applicant or any subsequent developer contacts United Utilities, using our pre-development enquiry service to discuss their proposals directly with our Developer Services team. They can find further advice, along with a pre-development enquiry form, on our website: Building & Developing - United Utilities Alternative ways to contact the team are available in the Appendix, Section 4.0 'Contacts'.

DRAINAGE

We strongly encourage all developments to include sustainable drainage systems to help manage surface water and to offer new opportunities for wildlife to flourish. We request that Local Planning Authorities and applicants do all they can to avoid surface water entering the public sewer. The flows that come from this surface water are very large when compared with the foul water that comes from toilets, showers, baths, washing machines, etc. It is the surface water that uses up a lot of capacity in our sewers and results in the unnecessary pumping and treatment of surface water at our pumping stations and treatment works. If new developments can manage flows through sustainable drainage systems that discharge to an alternative to the public sewer, it will help to minimise the likelihood of sewers spilling into watercourses and the flooding of homes and businesses.

National Planning Policy Framework (NPPF) and the National Planning Practice Guidance (NPPG) advise that surface water from new developments should be investigated and delivered in the following order of priority:

1.
into the ground (infiltration);
2.
to a surface water body;
3.
to a surface water sewer, highway drain, or another drainage system;
4.
to a combined sewer.

Should the applicant receive Planning in Principle permission for this proposal, United Utilities will review the drainage element of any application for Technical Detail Consent in line with the surface water hierarchy. United Utilities will request evidence that the drainage hierarchy has been fully investigated and why more sustainable options are not achievable before a surface water connection to the public sewer is considered acceptable.

In the event that the applicant, or any subsequent developer, approaches United Utilities regarding a connection for surface water to the public sewer, it is likely that we will request evidence that the drainage hierarchy has been fully investigated and why more sustainable options are not achievable. This will be managed through either our 'S106 Sewer Connections' or 'S104 Adoptions' processes.

When considering their drainage proposal, the applicant should investigate the existence of any pipelines and/or apparatus that might impact their detailed design (see Section 'UNITED UTILITIES' PROPERTY, ASSETS AND INFRASTRUCTURE').

United Utilities will not carry out an assessment on the acceptability of submitted drainage proposals in relation to our water pipelines when responding to a planning application. It is the applicant's responsibility to ensure that any detailed drainage plans comply with our 'Standard Conditions for Works Adjacent to Pipelines' which can be found on our website: Working near our pipes - United Utilities. Failure to consider existing pipelines when designing a drainage proposal may result in the applicant having to redesign proposals at a later date.

UNITED UTILITIES' PROPERTY, ASSETS AND INFRASTRUCTURE

It is the applicant's responsibility to investigate the existence of any pipelines that might cross or impact their proposed site and also to demonstrate the exact relationship between United Utilities' assets and the proposed development. The applicant should not rely solely on the detail contained within asset maps when considering a proposed layout.

It is important that the supporting information contained in the Appendix, Section 2.0 'United Utilities' Property, Assets and Infrastructure', is read in conjunction with this letter. This provides information that might impact a proposed layout and additional guidance that an applicant or developer must consider when United Utilities assets are located in, or in the locality of, the proposed site.

Where United Utilities' assets exist, it is essential that the applicant, or any subsequent developer, contacts our Developer Services team prior to commencing any works on site, including trial holes, groundworks or demolition. See Appendix. Section 4.0 'Contacts'

WATER EFFICIENCY IN NEW DEVELOPMENT

Local planning authorities have the option to set additional technical requirements in respect of water use for the construction of new build dwellings, exceeding the

minimum standards required by Building Regulations. All new homes are required to meet the mandatory national standard of 125 litres of water used per person per day as set out in Building Regulations Approved Document G. Where there is a clear local need, a local planning authority's development plan policies can require new-build dwellings to meet the tighter Building Regulations optional requirement of 110 litres of water used per person per day. If your adopted development plan includes a policy that implements the tighter water efficiency standard for new-build dwellings in Part 3 of Building Regulations, you should ensure that this is a condition of any planning permission you may grant. You should also consider whether there is any adopted development plan policy relating to a water efficiency in the construction of non-residential development. As this is a matter for the local planning authority / building control body, United Utilities would not be involved in the discharge of conditions relating to water efficiency.

APPENDIX:

Supporting information for the decision maker, applicant, developers and any other interested party

Whilst we provide the following information to support the design and delivery of the proposed scheme, we strongly recommend that the applicant, or any subsequent developer, contacts our Developer Services team at the earliest opportunity, using our pre-development enquiry service, to ensure they have fully considered all aspects of development and to avoid any potential issues or unexpected costs at a later date. Full details of the services offered to developers, guidance and application forms are available on our website: Building & Developing - United Utilities

1.0 DRAINAGE DESIGN

1.1 The importance of sustainable drainage systems

We strongly encourage all developments to include sustainable drainage systems to help manage surface water and to offer new opportunities for wildlife to flourish. We request that Local Planning Authorities and applicants do all they can to avoid surface water entering the public sewer. The flows that come from this surface water are very large when compared with the foul water that comes from toilets, showers, baths, washing machines, etc. It is the surface water that uses up a lot of capacity in our sewers and results in the unnecessary pumping and treatment of surface water at our pumping stations and treatment works. If new developments can manage flows through sustainable drainage systems that discharge to an alternative to the public sewer, it will help to minimise the likelihood of sewers spilling into watercourses and the flooding of homes and businesses.

1.2 Adoption and construction of drainage systems

If the applicant intends to offer wastewater assets forward for adoption by United Utilities, their proposed detailed design will be subject to a technical appraisal by our Developer Services team and must meet the requirements outlined in 'Sewerage Sector Guidance Appendix C – Design and Construction Guidance v2-2' dated 29 June 2022 or any subsequent iteration. This is important as drainage design can be a key determining factor of site levels and layout.

If the proposal incorporates a SuDS component(s) which interacts with a sewer network that may be offered for adoption by United Utilities we recommend the applicant seeks further advice regarding the SuDS design; detailed information is available on our website.

Our acceptance of any drainage strategy submitted by an applicant to the Local Planning Authority for approval does not infer that a detailed drainage design will meet the requirements for a successful adoption application. We strongly recommend that no construction commences until the detailed drainage design has been

submitted directly to United Utilities, assessed and accepted in writing. Any work carried out prior to the technical assessment being approved is done entirely at the developer's own risk and could be subject to change

2.0 UNITED UTILITIES' PROPERTY, ASSETS AND INFRASTRUCTURE

2.1 Water pipelines

United Utilities will not allow building over or in close proximity to a water main. For any works in the vicinity of water pipelines, including drainage, the applicant must comply with our 'Standard Conditions for Works Adjacent to Pipelines', which can be found on our website: Working near our pipes - United Utilities

2.2 Wastewater pipelines

United Utilities will not allow any new buildings or structures to be erected over or in close proximity to a public sewer or any other wastewater pipeline. This will only be reviewed in exceptional circumstances.

Nb. Proposals to extend domestic properties either above, or in close proximity to a public sewer will be reviewed on a case by case basis by either by a building control professional or following a direct application to United Utilities (see our website for further details).

2.3 Water and wastewater pipelines and apparatus

A number of providers offer a paid for mapping service, including United Utilities (see Section 4.0 'Contacts' (below)). The position of the underground apparatus shown on water and wastewater asset maps is approximate only and is given in accordance with the best information currently available. Therefore, we strongly recommend the applicant, or any future developer, does not rely solely on the asset maps to inform decisions relating to the detail of their site and instead investigates the precise location of any underground pipelines and apparatus. Where additional information is requested to enable an assessment of the proximity of proposed development features to United Utilities assets, the proven location of pipelines should be confirmed by site survey; an extract of asset maps will not suffice. The applicant should seek advice from our Developer Services team on this matter. See Section 4.0. 'Contacts' (below). United Utilities Water will not accept liability for any loss or damage caused by the actual position of our assets and infrastructure being different from those shown on asset maps.

Developers should investigate the existence and the precise location of water and wastewater pipelines as soon as possible as this could significantly impact the preferred site layout and/or diversion of the asset(s) may be required. Unless there is specific provision within the title of the property or an associated easement, any necessary disconnection or diversion of assets to accommodate development, will be at the applicant/developer's expense. In some circumstances, usually related to the size and nature of the assets impacted by proposals, developers may discover the cost of diversion is prohibitive in the context of their development scheme.

Any agreement to divert our underground assets will be subject to a diversion application, made directly to United Utilities. This is a separate matter to the determination of a planning application. We will not guarantee, or infer acceptance of, a proposed diversion through the planning process (where diversion is indicated on submitted plans). In the event that an application to divert or abandon underground assets is submitted to United Utilities and subsequently rejected (either before or after the determination of a planning application), applicants should be aware that they may need to amend their proposed layout to accommodate United Utilities' assets.

Where United Utilities' assets exist, the level of cover to United Utilities pipelines and

apparatus must not be compromised either during or after construction and there should be no additional load bearing capacity on pipelines without prior agreement from United Utilities. This would include sustainable drainage features, earth movement and the transport and position of construction equipment and vehicles. Any construction activities in the vicinity of United Utilities' assets, including any assets or infrastructure that may be located outside the applicant's red line boundary, must comply with national building and construction standards and where applicable, our 'Standard Conditions for Works Adjacent to Pipelines', which can be found on our website: Working near our pipes - United Utilities.

The applicant, and/or any subsequent developer should note that our 'Standard Conditions' guidance applies to any design and construction activities in close proximity to water pipelines and apparatus that are no longer in service, as well as pipelines and apparatus that are currently in operation.

It is the applicant's responsibility to ensure that United Utilities' required access is provided within any proposed layout and that our infrastructure is appropriately protected. The developer would be liable for the cost of any damage to United Utilities' assets resulting from their activity.

3.0 WATER AND WASTEWATER SERVICES, METERING AND CHARGES

If the applicant intends to receive water and/or wastewater services from United Utilities they should visit our website or contact the Developer Services team for advice at the earliest opportunity. This includes seeking confirmation of the required metering arrangements for the proposed development. See Section 4.0 'Contacts' (below).

If the proposed development site benefits from existing water and wastewater connections, the applicant should not assume that the connection(s) will be suitable for the new proposal or that any existing metering arrangements will suffice. In addition, if reinforcement of the water network is required to meet potential demand, this could be a significant project and the design and construction period should be accounted for.

In some circumstances a water meter must be installed to premises. Detailed guidance on whether the development will require a compulsory meter is available on our website within our published Charges Schemes; Our charges 2024/25 | United Utilities (Section 8.7).

To promote sustainable development United Utilities offers a reduction in infrastructure charges to applicant's delivering water efficient homes and draining surface water sustainably (criteria applies). Further information can be found on our website: Sustainability - United Utilities

Business customers can find additional information on our sustainable drainage incentive scheme at Incentive schemes | United Utilities

To avoid any unnecessary costs and delays being incurred by the applicant or any subsequent developer, we strongly recommend the applicant seeks advice regarding water and wastewater services and metering arrangements, at the earliest opportunity. See Section 4.0 'Contacts' (below).

4.0 CONTACTS

For advice on your development contact our DEVELOPER SERVICES team as follows:

Website (including 'Live Chat'): Building & Developing - United Utilities

Email:

WATER (water mains, supply and metering): DeveloperServicesWater@uuplc.co.uk

WASTEWATER (public sewers and drainage): SewerAdoptions@uuplc.co.uk

SLUDGE PIPELINES: DeveloperServicesWater@uuplc.co.uk

Telephone (Monday-Friday, 8am-6pm): 0345 072 6067

PROPERTY SEARCHES (FOR ASSET MAPS):

A number of providers offer a paid for mapping service including United Utilities. For more information, or to purchase a sewer and water plan from United Utilities, please visit [Property Searches | United Utilities](#)

Water and sewer records can be viewed for free at our Warrington Head Office by calling 0370 751 0101. Appointments must be made in advance. Public sewer records can be viewed at local authority offices. Arrangements should be made directly with the local authority.

UNITED UTILITIES LEGAL SERVICES (FOR EASEMENT DOCUMENTS):

Copies of relevant deeds may be purchased from United Utilities Legal Services. This information is also available from Land Registry.

To purchase a copy of easement documents from United Utilities, please email: LegalServices@uuplc.co.uk

GMEU response

Not aware of any ecological issues associated with this site that would prevent planning permission being granted though this is most likely owing to a lack of survey effort. Given however its small size and development history, GMEU would also regard it as very unlikely that there would be any ecological issue that would prevent permission being granted.

GMEU would recommend that as part of any technical details stage a preliminary ecological appraisal and biodiversity net gain statement is provided.

EH Response

It is noted that this is a Stage 1 Permission in Principle application to establish the principle of development. As such conditions cannot be recommended, but we raise comments below regarding the information required for submission at the subsequent Stage 2, Technical Details Consent stage. The proposal is for between 1 no. and 6 no. dwellings.

Contaminated Land

The site is land associated with the former Pigsden Farm and the boundary of the site is within a registered landfill as such there is the potential for contamination to be present. The landfill is understood to be unlicensed but approved under planning c1986 for the tipping of skip waste to construct a roadway to the farmhouse. The area of tipping extends wider than the current Long Lane. Furthermore, a sensitive end use is proposed. As such, to avoid pre-commencement conditions sufficient information must be submitted at Stage 2, Technical Details Consent stage, to demonstrate that no remedial measures are required or to agree such measures. Further information regarding Land Contamination and the planning process can be found on the Planning Portal, with information on the likely assessments required to be undertaken and submitted here.

Air Quality

For this type of development, it would be expected that parking would be included. The site is not located within an Air Quality Management Area. Due to the scale of the proposed development, it is considered very unlikely that the proposed development could create an increase of more than 500 AADT (annual average daily traffic). Therefore, in line with the EPUK Guidance, an air quality assessment will not be required.

Bury Council has been identified by DEFRA as an area requiring to significantly improve air quality. To support the principles of the Greater Manchester Clean Air

Plan in reducing levels of nitrogen dioxide and in order to manage current and future levels of air pollution Bury Council is encouraging the use of cleaner vehicles. As such and in line the requirements of the Building Regulations (The Building Regulations 2010, Approved Document S, Infrastructure for the charging of electric vehicles), as part of the Stage 2, Technical Details Consent stage, the developer should provide information regarding Electric Vehicle Infrastructure to the following specification:

" 1 no. electric vehicle (EV) charging point (minimum 7kW*) per dwelling/parking space.

*Mode 3, 7kW (32A) single phase, or 22kW (32A) three phase, and for 50kW Mode 4 rapid charging may be required. British Standard BS EN 61851-1:2019 to be used. Further information regarding minimum standards can be found at <https://www.gov.uk/transport/low-emission-and-electric-vehicles>.

Certification and photographic evidence of the installation of the agreed electric vehicle charge points will be required to be submitted to Local Planning Authority for approval prior to the development being brought into use. The infrastructure shall be maintained and operational in perpetuity.

Greater Manchester Minerals and Waste response

The Greater Manchester Minerals Plan (adopted 2013) forms part of Bury's Development Plan and sets out policies relating to minerals, including the safeguarding of mineral resources.

The proposed development is located within a Mineral Safeguarding Area for sandstone, surface coal and brick clay and therefore Greater Manchester Minerals Plan Policy 8 - Prior Extraction of Mineral Resources Within Mineral Safeguarding Areas is relevant. This policy seeks to protect mineral resources from sterilisation by other forms of development. Policy 8 sets out a number of exemptions (criteria i-viii) for when the safeguarding policy is not relevant, but none apply here. Policy 8 sets out that proposals for non-mineral development within the Mineral Safeguarding Areas that do not allow for the prior extraction of minerals will only be permitted in certain circumstances (criteria 1 - 4). The application does not appear to make any reference to safeguarded minerals or Policy 8.

It is noted however that the proposed development site is relatively small and constrained by proximity to existing dwellings and an existing road. It is therefore unlikely that prior extraction of any mineral would be feasible in this case.

A Heritage Statement and Desk Study for Historic Monuments should be submitted at the Technical Details Stage.

Signed:

.....
On behalf of the Council

Date of Decision: 03/06/2025
