Excavation Works: **Friday 22nd July 2022**

Treatment Attendance 1: **TBC August 2022**

Treatment Attendance 2: **TBC September 2022**

REPORT DETAILS

EXCAVATION WORKS

JKC Operative in Attendance: Mike Wadsworth

Date: Friday 22nd July 2022

JKC arrived on site at 06:30 to take delivery of the excavator and proceeded to unload and wait for the driver to arrive at 07:30.

Mike inducted the drive on the works planned to be completed and started a CAT Scan of the area. No unidentified services were found in the area and therefore work could commence.

The affected area was excavated removing all the target plants vegetation and root system. Once the excavation was completed, the Japanese Knotweed crowns, root system and rhizome were segregated, and the holes backfilled with clean material from site.

A final check of the area was completed prior to cleaning down the machine and leaving site.

This location is now clear of any Japanese Knotweed contamination and there are no further restrictions required.

If further advise is required at any time, just contact the JKC office and someone will be happy to help.
