4 BROOKTHORPE ROAD, WALSHAW, BURY, BL8 3AD
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination, landfill gas and geotechnical issues.

SITE DESCRIPTION

The site is rectangular, about 35 by 30m, located to the northwest of Brookthorpe Road in Bury and at OS Grid Reference 378032, 411455. Inspected on 26/9/22 by Mr M Whitaker (Geotechnician), the site is a house and gardens having a tarmac drive at the northeast, tarmac/gravel path at the northwest, patio at the west and garden at the southwest. The garden being lower than the house. There are a mixture of trees along the northeast and southeast boundary and a hedge along the southwest boundary (not an accurate arboricultural survey).

Excavations on the southwest of the site suggest there is topsoil over clay, possibly with limited made ground in places.

The area slopes down to the southeast. There are houses on all sides.

PROPOSED DEVELOPMENT

It is proposed to demolish the existing house and build a new detached house on a similar footprint.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 16/9/22
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 26/9/22

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Discharge consents
- Pollution incidents
- Water abstraction points or Source protection zones
- Landfill sites
- Hazardous substances sites, Trade directory entries or Fuel stations
- Sensitive land uses (other than Greenbelt)

Geology of Site

The geological map indicates that the underlying solid rocks are mudstone of the Pennine Lower Coal Measures.

Surface drift is shown as glacial till (boulder clay) of unknown thickness, and natural subsidence hazards are shown as very low to no hazard.

Surface Water (Hydrology)

The nearest water course is a stream 220m southwest.

The area slopes down to the southeast, the flow of surface water is expected to be in this direction.

Flooding (General)

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding

The site is shown to have limited potential for groundwater flooding to occur.

Flooding from Rivers

The site is shown to be clear of flooding from rivers.

Surface Water Flooding

The site is shown to be clear of surface water flooding.

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Secondary A aquifer.

Superficial (drift) deposits are classed as a Secondary Undifferentiated aquifer.

Groundwater flow is likely to follow the topography and move to the southeast.

Filled Ground

Within 250 metres of the site there are the following suspected filled features:

- 56m northeast.
- 79m northwest.
- 204m southeast.
- 226m southeast.

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Mining

A Coal Authority report has been obtained and is enclosed. The salient points are:

- Workings are present in the Plodder coal seam at 41m deep, with 0.8m extracted in 1878.
- The site is not underlain by unrecorded shallow workings.
- No spine roadway recorded at shallow depth.
- No present or future planned mining.
- No opencast workings within 500m.
- No mine gas recorded within 500m.
- A mine shaft is shown 50m northwest. This is shown to have been filled in 1971.

NEARBY BOREHOLES/PREVIOUS REPORTS/OUTCROPS

The following information, and enclosed borehole logs, contain British Geological Survey materials © NERC (2022).

A BGS record for the mine shaft 50m northwest shows drift deposits (marl, sand, gravel) to 20.3m overlying sandstone.

SITE HISTORY

Date	On Site	Off Site
1850 (1:10,560)	Undeveloped plot.	Surrounded by undeveloped fields. Pond 70m northwest, 205m southeast and 180m southeast.
1893 (1:2,500)	Little or no change.	Old shaft 40m northwest.
1910 (1:2,500)	Little or no change.	Building (unknown) 20m east.
1929-30 (1:2,500)	Little or no change.	House 40m north and 25m northeast. Tank 100m southeast. Pumphouse 45m northwest.
1955-60 (1:1,250)	Little or no change.	Housing 15m east and 25m southeast. Pond to northwest, and 205m southeast, filled.
1982 (1:10,000)	House on north of site.	Housing 10m east, 10m north and immediately southwest.
2003 (1:10,000)	Little or no change.	Possible field drain 205m south.
2022 (1:10,000)	Little or no change.	Site is located in a residential area.

DISCUSSION

Contamination

The site was undeveloped until the existing house was built circa 1970s/80s. There has been no use of the site from which high levels of contaminants would be expected, although low levels (exceeding stringent residential thresholds) from building materials or limited made ground cannot be ruled out.

There is no indication from historical mapping that significant thicknesses of made ground would be imported prior to construction. However, the house is raised above the southwest garden and the presence of made ground cannot be ruled out at this stage, especially at the middle/northeast.

There have been no nearby land uses which will affect the site and no nearby pollution incidents.

The development will be a house with gardens. Potential pollutant linkages are:

- Direct contact with soil.
- Ingestion of soil.
- From homegrown vegetables and soil attached to vegetables.
- Inhalation and ingestion of dust.

A low risk is anticipated, with possible localised contaminants present especially if made ground is seen at the middle/northeast.

Controlled Waters

There is an underlying Secondary A aquifer beneath clay. There are no nearby water abstraction points or source protection zone.

There is a stream 220m southwest.

Although the gardens will allow rainwater to pass through the surface soils, contamination is not expected at high levels. The underlying clay will impede the migration of water and it is anticipated there will be no risk to the controlled waters.

Landfill Gas/Ground Gas

There are no landfill sites or significant filled features within 250m. The nearest filled pond is 70m northwest, however, this is a small pond, probably less than 2m deep, with limited material for gas generation. Gases would not be expected at levels which would migrate through the clay to the site. Furthermore, the pond is about 2m above the site.

The next nearest pond is over 180m away and does not pose a risk.

A mine shaft to the northwest, reported as filled, which will prevent or significantly reduce, potential for gas to migrate to the surface. Furthermore, the shaft is above the site and gases will migrate up to the northwest, not down to the site.

The shallowest coal workings are reported as about 40m deep, below about 20m of mudstone and 20m of drift deposits (probably clay). The thickness of working suggest a worst case 15m intact rock is likely, which would impede the passage of gases (if any), as will overlying clay.

The findings suggest no credible on or off-site landfill or ground gas sources and no risk to the site.

Radon

Radon protection measures are not required.

Flooding from Rivers

The Environment Agency maps show that this site is clear of flooding from rivers.

Groundwater and Surface Water Flooding

The site is shown to be clear of areas of surface water flooding.

Foundations

The geology map and site inspection suggests the site is underlain by clay which often provides a good bearing strata for traditional shallow foundations.

If foundations are to be on clay the shrinkage potential of the clay needs to be determined, to ensure foundations are below the potential effects of tree root shrinkage.

INDUSTRY PROFILE

The site has had no industrial use. Made ground cannot be ruled out at this stage.

Source of Contaminants	Possible Contaminants
Made Ground	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Phenols Mineral oils, fuel oils (TPHs) Asbestos General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included with this desk study to show the potential pollutant linkages with this site.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	Inhalation	No
	Off-site	Migration off-site	No
Inorganic contaminants	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Possible
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	No
Hydrocarbons	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Possible
	Service pipes	Seeping into drinking water pipes	Unlikely
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	No
Landfill gas	End-users - in buildings	Seeping into buildings, explosion, asphyxiation	No
Radon	End-users - in buildings	Seeping into buildings	No

CONCLUSION

Contamination

Taking into account the past use of the site it is unlikely that contamination will be present at high levels. Low levels may be present, exceeding stringent residential thresholds, especially if made ground is present.

A limited intrusive investigation is suggested, consisting of boreholes/ trial holes and tests to confirm if made ground is present and the presence/absence and extent of contamination on the site. There are no specific point sources for contamination.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary at this stage. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

The findings suggest no credible on or off-site landfill or ground gas sources and no risk to the site.

Subject to Local Authority agreement, it is considered gas testing is not needed and no special precautions are required.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers.

The maps indicate that the area is clear of surface water flooding.

These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Foundations

A series of boreholes are required in the area of the proposed building to allow the most suitable foundations to be designed.

Plasticity tests are required to confirm the shrinkage potential of the clay.

Yours faithfully
on behalf of Worms Eye Ltd

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Lancashire And Furness

Published 1850

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).
