

Supporting Letter

There is a need to upgrade the sprinkler system on site, the current sprinkler system is not suitable for upgrade. To allow the site to continue to have some sprinkler protection, there is a need to build a new sprinkler pump station and tanks. This is what site is requesting for in the planning permission. The upgrade requires more tanks and more pumps than the original system. Which is one of the drivers to change the location of the sprinkler tank and pump house. The upgrade will give Tetrosyl an up to code sprinkler protection across the whole site.
