Danyel Thwaites – The Queens, Bradley Fold, Radcliffe BL2 6RA – Acoustic Report

Dear Mark,

Thanks for your email. At present I'm away and don't have access to my main computer. However, I've drafted below some elements of the management plan for noise which may satisfy the planning officer at this stage. We normally don't provide this kind of management plan as it's obviously site specific, but hopefully the points below will help.

Management plan – noise control

The purpose of this plan is to ensure excess noise from customer activity is minimised. This plan is site specific, but consideration should be given to the following:

Site management should make regular visits to the external area to make sure customer activity is not creating excess noise.

Noise from external devices such as mobile phones should be limited in the external seating area.

The hours of use permitted by planning should be strictly enforced.

Customers/families with children should as far as practically possible maintain a reasonable levels of noise from speech.

I trust above is helpful, but again as I said earlier such a plan really needs to be written based on the activities and operation of the site itself. In this case, we can only offer a generic recommendation/suggestion, but hope this intervention has been helpful.

Kind regards,

Yours sincerely
