Root Protection Area

In order to avoid damage to the roots or rooting environment of realisation trees, the Root Protection Area (RPA) should be planted around each of the category A, B and C trees. This is a minimum area in m² which should be left undisturbed around each realisation tree.

The RPA is calculated using the British Standard BS 5837:2012. Times in relation to design, demolition and construction - Recommendations.

The calculated RPA is capped to 707 m², which is the equivalent to a circle with a radius of 15m. Where there appears to be restrictions to root growth the root protection area is reshaped to more accurately reflect the likely distribution of the roots.

Tree Survey Report

Please refer to Actecon Consulting Ltd. Tree Survey Report and Tree Schedule for full details on all surveyed trees, hedgehog and major shrub groups.

These items are not to be used as a substitute part of the engineering or construction design or method as based on the analysis or structural engineering. They should be considered only as supplementary details or specifications for any standards or regulatory requirements relating to proper construction, hard surfacing or underground structures.
