OWLERBARROW HOUSE, OWERLBARROW ROAD, BURY, BL8 1RD
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination, landfill gas and geotechnical issues.

SITE DESCRIPTION

The site is almost rectangular, 21 by 16m, located to the east of Owlerbarrow Road in Bury and at OS Grid Reference 378200, 411400. The site, inspected on 12/9/25 by Mr M Whitaker, is a garden to the southeast of Owlerbarrow House. At the northwest and middle is a lawn and at the southeast is a small allotment with greenhouses and a shed. There are no obvious signs of contamination.

There are mature deciduous trees at the southeast corner and off-site to the northwest, and a hedge along the southwest and southeast boundaries (not an arboricultural survey).

The area slopes down to the southeast. There is a house to the southeast and gardens to the northeast and northwest.

PROPOSED DEVELOPMENT

It is proposed to build a bungalow with associated parking to its northwest and gardens to its northwest, southeast and southwest.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 4/9/25
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 12/9/25

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Discharge consents
- Pollution incidents
- Water abstraction points or Source protection zones
- Landfill sites
- Hazardous substances sites, Trade directory entries or Fuel stations
- Sensitive land uses (none other than area of Adopted Green Belt)

Geology of Site

The geological map shows underlying solid rocks as sandstone below most of the site and unnamed strata, usually mudstone, below the northwest corner, both in the Pennine Lower Coal Measures.

Surface drift is shown as Diamicton Till (boulder clay) of unknown thickness and natural subsidence hazards are shown as very low to no hazard.

Surface Water (Hydrology)

A stream flows east and sinks 250m southwest, before flowing southeast in a culvert.

The area slopes down to the southeast, the flow of surface water is expected to be in this direction.

Flooding (General)

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding - Potential for groundwater flooding of property situated below ground level.

Flooding from Rivers - Shown to be clear of flooding from rivers.

Surface Water Flooding – Shown to be clear of surface water flooding.

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Secondary A aquifer and superficial (drift) deposits are classed as a Secondary Undifferentiated aquifer.

Groundwater flow is likely to follow the topography and move to the southeast.

Filled Ground

Within 250 metres of the site there are the following suspected filled features:

- 160m and 243m northwest
- 99m and 142m south
- 211m northeast

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Mining

The Coal Authority Interactive Mapping shows:

- Site is not in a Development High Risk Area.
- Site is not underlain by probable shallow mine workings or known underground workings.
- No nearby coal seams or mine entries.

SITE HISTORY

Date	On Site	Off Site
1850 (1:10,560)	Undeveloped plot *	Pond 85m southeast, 130m southwest and 240m northwest. Houses 18m north (with outbuildings), immediately southeast and 10m west.
1893 (1:2,500)	Undeveloped plot *	Old shaft 205m northwest. Houses 20m north.
1910 (1:2,500)	Undeveloped plot *	Pond 230m southwest.
1929 (1:2,500)	Undeveloped plot *	House 10m southwest, 90m north and 110m northwest.
1955-60	Garden to house to north.	Outbuildings to north demolished and house built 20m north. Pond 85m southeast and 240m northwest presumed filled. School 120m northeast. House 5m southeast demolished. Playing field 12m southeast, in a shallow excavation
1974-92	Garden.	No relevant change.
1999 (1:10,000)	Garden.	House immediately south and 40m south.
2006-16	Garden.	No relevant change.
2025 (1:10,000)	Garden.	School to northeast demolished and rebuilt 75m east.

* The site may have been a garden to the house to the north but mapping is unclear.

DISCUSSION

Contamination

The site is a garden to the southeast of an existing house. This is not a use from which high levels of contaminants would be expected. However, having been a garden for over 100 years there is the potential for materials to have been added to promote plant growth (e.g. soot and ash) which can have low levels of contaminants, exceeding stringent residential thresholds.

There have been no nearby industrial uses which will affect the site. A house immediately southeast, demolished as part of the nearby school development, is unlikely to be a source of significant contaminants although low levels, exceeding stringent residential thresholds, from demolition material cannot be ruled out at this stage at the southeast.

The domestic garage immediately southeast is also a possible source of low levels of contaminants. Although these are expected to migrate down the hydraulic gradient to the southeast, not up to the site, their presence at the southeast, in close proximity to the garage, cannot be ruled out.

The development will be a house with garden. Potential pollutant linkages are considered to be:

- Direct contact with and ingestion of soil.
- From homegrown vegetables and soil attached to vegetables.
- Inhalation and ingestion of dust.

A low risk is anticipated.

Controlled Waters

There is an underlying Secondary A aquifer beneath clay, but no nearby water abstraction points or source protection zones.

A stream sinks 250m southwest, before flowing southeast in a culvert.

Although gardens will allow rainwater to pass through the surface soils, contamination is not expected at high levels. Furthermore, the underlying clay will impede the migration of water and it is anticipated there will be no risk to controlled waters.

Landfill Gas/Ground Gas

There are no landfill sites or significant filled features within 250m. Several suspected filled ponds in the surrounding area, the closest 85m southeast, were small features which would have very limited source material for gas generation, if any, insufficient to produce gas at sufficient volume to migrate through the underlying clay to the site.

The findings show no credible landfill or ground gas sources and no gas risk to the development.

Radon

Radon protection measures are not required.

Flooding

The Environment Agency maps show that this site is clear of flooding from rivers and surface water flooding and may be subject to groundwater flooding of property situated below ground level.

Foundations

The geology map suggests the site is underlain by clay which often provides a good bearing strata for traditional shallow foundations.

If foundations are to be on clay the shrinkage potential of the clay needs to be determined, to ensure foundations are below the potential effects of tree root shrinkage.

INDUSTRY PROFILE

The site has had no industrial use.

Source of Contaminants	Possible Contaminants
Demolition material, Garden maintenance, Domestic garage	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Mineral oils, fuel oils (TPHs) Asbestos General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	Inhalation	Unlikely
	Off-site	Migration off-site	No
Inorganic contaminants	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Possible
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	No
Hydrocarbons	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	Possible
	Service pipes	Seeping into drinking water pipes	Unlikely
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	No
Landfill gas	End-users (inside)	Seeping into buildings, explosion, asphyxiation	No
Radon	End-users (inside)	Seeping into buildings	No

CONCLUSION

Contamination

The site history suggests it is unlikely that contaminants will be present at high levels. However, low levels may be present, exceeding stringent residential thresholds in places, especially at the southeast.

A limited intrusive investigation is suggested consisting of trial holes and tests to confirm the presence/absence and extent of contamination on the site. The garage and former house to the southeast are possible point source for contamination and the investigation will need to target these and proposed gardens.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary at this stage. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

The findings show no credible landfill or ground gas sources and no gas risk to the development.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers and surface water flooding. These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Foundations

A series of boreholes are required in the area of the proposed building to allow the most suitable foundations to be designed. Plasticity tests are required to confirm the shrinkage potential of the clay.

Yours faithfully

on behalf of Worms Eye Ltd

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

LANDMARK INFORMATION GROUP®

Lancashire And Furness

Published 1850

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
