

Places for Everyone (PfE)

JP-S2 – There are no changes to the existing land use. The area has been used as a temporary storage area for highway materials for the last 10+ years. The proposed storage bays will help us to recycle material and manage the site better by keeping it tidy and controlled. There is no requirement for an EV chargepoint on this site.

JP-C2 – Digital connectivity is not applicable for this application as the development involves the improvement of an existing material storage area. There is no requirement for digital connectivity.
