1.0 Introduction

Geo² Remediation Limited were commissioned by Pearl Forecourts to conduct a Phase I Preliminary Risk Assessment of a parcel of land located at

Site off Bell Lane,

Bury,
BL9 6AD

The site is approximately 0.59 hectares in area and located at grid reference 381250, 411260.

The study was undertaken prior to proposed redevelopment of the site for use as a Petrol Filling Station (PFS) as well as a drive through. A proposed development plan for the site can be referred to within Appendix A.

1.1 Scope of Works

The Phase I Preliminary Risk Assessment, consisting of a walkover and desk study, was conducted in order to establish evidence of potential contamination, if any, resulting from the past use of the site and current land use.

The desk study was also undertaken to identify possible sensitive receptors that may be at risk within the locality of the site.

2.0 Description of the Site and Surroundings

2.1 Site Description

The site is located 900m northeast of the town centre of Bury which is the midpoint between Bolton (9.6km west) and Rochdale (8.6km east). Figures 1 and 2 in Appendix A show the location of the site.

The area shown within the red site boundary on Figure A below, will be referred to throughout this document as 'the site'. As seen in Figure A, the site is currently occupied by two buildings. The main L-shaped building is a Car Time car dealership and MOT garage in the southeastern area of the site, with a smaller vehicle servicing building in the northeastern corner. The remainder of the site is used for vehicle parking.

Figure A: Site Location Plan. Red is approximate site boundary and pink are 50m and 100m buffers. Extract from Envirocheck report (Appendix C).

2.2 Site Walkover

A site walkover was undertaken on 27th September 2023, with a photographic survey of Images 1-30 included in Appendix B. The site walkover findings are detailed below.

The site is occupied by a Car Time dealership, MOT and servicing centre and is located north of Bell Lane (B6222). The site is currently accessed by one ingress/egress point located at the western site boundary adjoining to Bridge St (Image 1). The site is also bound by Cobden St to the north and other commercial properties to the east (Images 25-30). Other Car Time dealerships are located directly south and west, opposite Bell Ln and Bridge St respectively (Images 28-30).

The site was observed to be gently sloping down to the west and to the north, with a steeper incline observed in the southwest corner (Image 2).

The site is occupied by two buildings. The larger L-shaped building is occupied by the car sales shop and offices, with the southern end of the building at a higher elevation (Image 9) due to the change of site levels. The eastern end of the L-shaped building is an MOT garage (Images 15 and 16).

The small warehouse-style building in the northeastern corner of the site is a vehicle servicing garage (Images 19 and 20). The remainder of the site is used for parking, with vehicles for sale located in the southern area (Images 5-8) and the northern car parking primarily used by staff, visitors and vehicles for the MOT or servicing garages (Images 10-12 and 19).

The northern and eastern boundaries comprise stone walls (Images 17 and 25), while the southern and western boundaries are generally open, with metal posts to prevent vehicle movements on / off site (Images 1-3).

No evidence of historic industrial land uses were observed on site. Evidence of an old security gate separating the north-eastern area of the site was observed in the northern area, with the metalwork still in place and an old fence believed to have existed across the area of gravel (Image 13).

No visual or olfactory evidence of contamination was observed during the site walkover.

2.3 Site Surroundings

The site is located in the town of Bury in Greater Manchester. The nearest residential properties are 30m southeast of the site. The surrounding land uses of the site are summarised in Table 1 below.

Direction	Land Use
North	Cobden Street and commercial businesses within a large building complex with warehouses and commercial buildings beyond.
East	Two commercial buildings and a warehouse just off site with Bright Street and further commercial buildings and dwellings beyond.
South	Bell Lane (B6222) with commercial business and residential area beyond.
West	Bridge Street, car dealership and warehouse for commercial use beyond.

Table 1. Land Uses in the Surrounding Area.

2.4 Site Infrastructure

2.4.1 Surfacing

Surfacing comprised tarmac across the northern part of the site associated with car parking for the MOT and servicing centres (Images 10-12, Appendix B) and brick paving across the southern part of the site associated with the existing car dealership (Images 5-8). The southeastern corner of the site was observed to have gravel surfacing (Images 3 and 4).

The tarmac surfacing was generally in good condition, with small areas of recently resurfaced tarmac or new potholes observed to the north of the MOT centre (Image 14) and south of the servicing centre (Image 18).

The MOT and service centre buildings were observed to both have concrete floors considered to be in good condition (Images 16 and 20).

2.4.2 Drainage

Gridded surface drains were observed by the Geo² engineer across the site (Images 13 and 24).

A number of manhole covers were observed on site, with two adjacent manholes recorded near the site's ingress / egress point to the west (Images 21-23).

2.4.3 Fuel Storage Infrastructure

No evidence of a tank farm or vent pipes related to underground storage tanks (USTs) were observed by the Geo² engineer during the site walkover.

As the site has been a Garage since the 1980s, the presence of known or unknown historic tanks cannot be discounted. Above ground storage tanks may exist on site for the storage or used engine oil, but were not observed at the time of the site walkover.

3.0 Desk Study

3.1 Desk Study Data

Information regarding the environmental setting of the site was obtained from the Envirocheck report, which collated information from a variety of sources. A copy of the Envirocheck report is presented in Appendix C.

Where indicated in Table 2 below and Table 3 on the following page, the data from the Envirocheck report has been supplemented with additional information obtained from freely available online data.

Site Geology	BGS data indicates bedrock consists of Pennine Lower Coal Measures (PLCM) Formation, comprising interbedded mudstone, siltstone and sandstone. A fault line is mapped along the southern boundary, with PLCM bedrock on either side. Superficial deposits are indicated to comprise of Till Devensian. An available BGS borehole log on site recorded Made Ground to 2.7m bgl, underlain by soft clay to 4.4m bgl with sand and gravels to the base of the borehole at 5.0m bgl. A deeper BGS borehole log located 64m northeast records bedrock at 12.2m bgl. There are no BGS Recorded Mineral Sites within 1,000m of the site. The site has no to very low hazard regarding the potential for ground stability hazards including collapsible ground, compressible ground, ground dissolution, landslide, running sand and shrinking and swelling clays.
Coal	A review of the Coal Authority online interactive mapping indicates that while the site is located within a coal mining reporting area, the site is not located within a Development High Risk Area (DHRA) and the nearest recorded mine shafts, coal outcrops and probable shallow coal mine workings are all located >500m southwest. Therefore, the risk to the proposed development from shallow coal mining is considered to be Low.
Radon	The site is in a low probability radon area (less than 1% of homes are estimated to be at or above the Action Level). As such, no radon protective measures are necessary in the construction of new dwellings or extensions.
Site Hydrogeology	The bedrock is classified as a Secondary A Aquifer – Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as Minor Aquifer. The superficial deposits are a Secondary Undifferentiated Aquifer – These have been assigned in cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type. The site is not located within a Source Protection Zone (SPZ). The nearest groundwater abstraction is located 191m north for manufacturing use. There are no potable groundwater abstraction points within 1km.

Table 2. Environmental Assessment of the Site.

Site Hydrology	The nearest surface water feature is Barn Brook located 50m northwest, flowing south and it appears to become culverted at this point. The River Roch is located 870m southeast, flowing south and has a Grade C water quality. There are no potable surface water abstraction points within 1km, with the nearest abstraction point located 291m north for a manufacturing use. There are 5 pollution incidents ranging from 240-996m from site and were all reported to be minor incidents.
Waste and Infilled Land	There are no BGS recorded landfill sites, historical landfill sites or licenced waste management facilities within 1,000m of the site. There are 5 records of potentially infilled land (non-water) located within 1000m of the site, all located 158m and 903m from the site and therefore considered too far to present a ground gas risk to the site. While there are 35 records of potentially infilled land (water) within 1000m of the site, all are located 55-880m from the site and therefore considered to be too far a distance as to impact the site.
Unexploded Ordnance	A review of Zetica online risk mapping for the area indicates the site is located in a Low-risk area with respect to unexploded ordnance.

Table 3. Environmental Assessment of the Site.

4.0 Site History

Details regarding the development of the site, its immediate surroundings and potentially contaminative land uses were obtained from a review of historical maps.

Copies of the maps are provided in Appendix C and a brief summary is provided in Table 4 with a more detailed summary provided in Table 5 and Table 6 on the following pages.

Key Historical Activities	
On-Site	Earliest mapping from 1849 shows the central area of the site was developed as a Gas Works, with a reservoir and chimney on the eastern boundary and two circular gasometers. Across the southern area of the site were two rows of terraced properties. The gas works was relabelled as a Cotton Mill by 1891, with the former gasometers now mapped as reservoirs. The site then became a Velvet Mill in 1910, named as Freetown Mill y 1939. The mill buildings extend northwards and westwards across the site unto 1960. By the late 1970s, the entire site has been redeveloped, with all historic buildings and terraced properties and the chimney being demolished and all reservoirs no longer mapped. Two large Garage buildings are constructed in the south. Mapping from the 1980s show further garage buildings added I the northeastern area of the site. By 2001, the site is established as the layout seen today, with a single garage building in the northeast corner and the southern-most building reduced to only occupy the southeast corner.
Off-Site	Early industrial land uses within 100m included Cotton Mills, Iron Foundries, Felt Hat Works and associated reservoirs, chimneys and tanks. Terraced housing dominated land use to the east and south. Since the 1960s, heavy industry and terraced properties have been replaced by commercial units and semi-detached housing, with a retail park also constructed from 150m southwest.

Table 4. Brief Summary of Historical Land Use On-Site and Off-Site.

All distances given in Tables 5 and 6 on the following pages are approximate and are relative to the site, unless otherwise stated.

Date	On-Site	Off-Site	Potential Contamination
1849 – 1851	Earliest mapping for the site from 1849 shows the central and northern areas of the site is developed as a Gas Works. A reservoir and chimney are mapped on the eastern boundary, with two circular gasometers in the eastern area. The buildings for the Gas Works occupy the central area, with a weighing machine on the western boundary. The southern area of the site is occupied by two rows of terraced properties aligned east-west which continue to the east and west. The northern-most part of the site is undeveloped.	Bell Lane already exists on the southern boundary of the site by 1849. The site is located on the northeastern outskirts of Bury, with Bell Meadow to the south, fields and terraced housing to the east. Industry in the area at that time includes Britannia Iron Foundry and reservoirs 10m north, Vitriol Works from 50m west, Free Town Cotton Mill from 50m northwest and Moorside Works and gasometers from 150m southwest. Barn Brook is mapped approx. 50m west, flowing south. A number of reservoirs are located adjacent to this brook to the north and south of the site.	Potential for hydrocarbon contamination arising from the site's historical use as a Gas Works. Potential for made ground on site from the construction of housing and industrial buildings on site.
1891 – 1893	By 1891, the Gas Works has been redeveloped as a Cotton Mill, with the main building extending to the northern boundary with Cobden St and also to the south and west. The two circular gasometers are mapped as reservoirs. The terraced housing across the southern area remains relatively unchanged and is named as Barnes's Yard to the west and Rawson Yard to the east.	By the 1890s, the town of Bury has extended significantly up to 750m north, 500m east and 1km south of the site. Cobden St and Back Bright St have been established along the northern and eastern boundaries respectively. The iron foundry to the north is now mapped as a cotton mill and the vitriol works is mapped as Albert Iron Works. Whilst land to the south and east of the site is predominantly occupied by terraced housing, local industries within 100m include a Braid Mill to the west, Higher Cotton Mills to the northwest and Chesham Felt Hat Works to the northeast. Barn Brook 50m west has been culverted beneath the Braid Mill and housing until reappearing again 150m southwest. An Old Clay Pit is mapped from 150m northeast	Potential for Made Ground arising from construction and extension of buildings. Potential for contamination associated with use of site as a cotton mill.
1910 – 1956	The cotton mill across the northern area of the site is renamed as a Velvet Mill, with the north-most building extending to the east and west and a small building is constructed in the northwest corner. By 1939, the velvet mill on site is named as Freetown Mill and a second small building has been constructed in the northwest corner of the site. The terraced properties to the south remain relatively unchanged.	Residential development continues from 250m east as Bury town continues to grow. A small reservoir associated with Britannia Mill 10m north is no longer mapped. Tanks a mapped 90m east at Chesham Felt Hat Works. The gasometers located 150m southwest are no longer mapped by 1910.	Potential for Made Ground arising from construction and extension of buildings. Potential for contamination associated with use of site as a velvet mill. Potential for ground gases arising from infilled reservoir 10m northeast.

Table 5. Detailed Summary Review of Historical Mapping (1849 – 1956)

Date	On-Site	Off-Site	Potential Contamination
1958 – 1960	Some of the terraced properties have been demolished, closest to the Mill buildings. The main Mill building has extended westwards.	The large reservoir associated with Britannia Mill 10m north is no longer mapped and has potentially been infilled. Redevelopment of areas of terraced properties has occurred from 90m north, with new housing, larger mills and a playground constructed.	Potential for ground gases arising from infilled reservoir from 20m northeast. Potential for Made Ground arising from demolition of terraced properties and construction of mill extensions. Potential for asbestos in soils from poor demolition practises.
1967 – 1996	By the late 1970s, the entire site has been redeveloped, with all historic buildings and the chimney being demolished and all reservoirs no longer mapped. The site is mapped as a Garage, with two large buildings in the south. By the early 1980s, a smaller building on the eastern boundary and two adjoining buildings along the northern boundary, set into the northeast corner have been constructed. A third small building is added along the centre of the northern boundary by 1988.	Redevelopment of the surrounding area has occurred, the Bridge St now fully established along the site's western boundary. Back Bright St is no longer mapped on the eastern boundary. Terraced properties located east, west and south of the site have been demolished and replaced by commercial units or semi-detached housing. A garage is mapped 70m south.	Potential for ground gases arising from infilled reservoirs on the eastern side of the site. Potential for Made Ground arising from demolition of all buildings on site and construction of new Garage buildings. Potential for asbestos in soils from poor demolition practises. Potential for contamination arising from the site's use as a Garage, in particular hydrocarbons
1999 – 2023	1999 mapping shows the site has been redeveloped again, with the southern-most building now only located in the south-eastern corner, as it exists today. All buildings along the north-eastern and eastern boundaries have been demolished. 2001 aerial photography shows the service centre building has been constructed in the north-eastern corner of the site, as it exists today, with the remainder of the site used for car parking.	Redevelopment of Bury town continues, with a new retail park constructed from 150m southwest, replacing a number of Mills, Works and associated reservoirs. Barn Brook is no longer mapped to the southwest.	Potential for Made Ground arising from construction of new Garage buildings. Potential for contamination arising from the site's use as a Garage, in particular hydrocarbons

Table 6. Detailed Summary Review of Historical Mapping (1958 – 2023)

5.0 Preliminary Risk Assessment

5.1 Source – Pathway – Receptor

UK legislation and guidance on assessing potentially contaminated land recommends the use of a risk assessment process based on a review of source/pathway/receptor relationships for various environmental media. The first stage of any risk assessment is to identify, using the desk study data and site information, the presence and extent of any hazard at the site, theoretical or demonstrable.

A key component of the overall risk assessment process is identification of “significant contaminant linkages” between contaminants and receptors. This can be accomplished through development of a site-specific conceptual model in which the potential contaminants, pathways and receptors identified on-site are described.

Each element can be defined as follows:

- **Contaminant source:** A substance either on or under the land and which has the potential to cause harm or pollution to human or environmental receptors.
- **Pathway:** A route or means by which a receptor can be exposed to or affected by a source.
- **Receptor:** A living organism or an ecological system, or controlled water, or property including buildings, crops and livestock.

The presence of all three of the above elements identifies a contamination linkage and a potentially unacceptable risk. To ensure that any risk present to, or, from the site can be appropriately managed each of these contamination linkages will be targeted by the investigation.

5.2 Hazard Identification

Potentially contaminative on-site activities relate to the historical use of the site as a gasworks with associated gasometers and chimney, cotton mill and then velvet mill to circa 1960. Full redevelopment of the entire site to a Garage post-1960 may have resulted in the infilling of historic reservoirs and potential for asbestos fibres or fragments in soils due to poor demolition practises at the time.

The site's use as a car sales garage, MOT and servicing Garage may be a source of hydrocarbon contamination, although no evidence of underground tanks were evident during the recent site walkover.

Due to the age of the buildings on site, it is likely that asbestos materials were used in the construction of the some of the buildings.

An unknown thickness of made ground soils on site and potentially infilled reservoirs may be sources of ground gases such as carbon dioxide and methane.

No significant off-site sources of contamination have been identified within proximity to the site, with the site located in a historically industrial area that is now predominantly commercial land use.

5.3 Initial Conceptual Site Model

Contamination linkages arise as a result of the interconnection of the contaminant source, contamination pathways and potential receptors. These contamination linkages are used to design the site investigation (if required), guiding the type of investigation, location of exploratory boreholes and the required sample analysis.

6.0 Risk Estimation

The objective of the qualitative risk assessment is to determine the significance of the risk, if any, which may occur as a result of the creation of pollutant linkages, which connect a potential receptor to an identified potential contaminant source at the site.

The perceived risk is based on a consideration of both the likelihood of an event (probability) occurring, and the severity of the potential consequence. Classification of these two factors is detailed in Appendix D.

6.1 Qualitative Risk Assessment

A qualitative risk assessment is undertaken, detailed in Table 7 on the following page, in line with guidance provided in CIRIA's Contaminated Land Risk Assessment: a guide to good practice CIRIA C552, 2001. The purpose of this assessment is to determine the relative significance of the identified contamination linkages by assessing the probability of an impact occurring and by assessing the perceived severity of an impact to a receptor.

Those linkages considered of low risk or less on the basis of the available site data will not be considered any further in this assessment. Linkages considered to be more significant are identified as presenting potentially unacceptable risk to the identified receptor. In these instances, further works may be considered necessary.

Linkage No.	Source	Pathway	Receptor	Probability	Severity	Risk Classification
1	Potential contamination associated with historical operation of the northern area of the site as a gas works in the mid 19 th Century; a cotton and velvet mill up to the 1960s; and as a car sales, MOT and servicing Garage up to today.	Leaching to groundwater, lateral and vertical flow, followed by migration within the aquifer	Surface water such as Barn Brook located 50m northwest, flowing south	Low Likelihood Taking into account the low permeability clay superficial deposits and that the surrounding land use was historically industrial and is now dominated by commercial land use. Furthermore, Barn Brook is culverted beneath the town from 50m north.	Mild (non-sensitive receptor)	Low
2	Contaminants of concern are likely to include TPHs, PAHs, VOCs, SVOCs and heavy metals.		Bedrock Secondary A Aquifer. No SPZ and no potable groundwater abstractions within 1km Superficial deposits Secondary Undifferentiated Aquifer	Low Likelihood A BGS borehole 64m northeast records made ground underlain by glacial till clay, with bedrock at 12m bgl. The underlying Secondary A Aquifer is therefore considered to be protected by a thickness of low permeability clay superficial deposits.	Medium (sensitive receptor)	Moderate / Low
3	The southern area of the site was not heavily industrialised, with land use limited to terraced properties until the 1960s / 1970s when the car sales garage was constructed.	Exposure to harmful vapours, hazardous ground gas and tainting of water supply	Current and proposed Commercial site end users	Likely (Northern area) Due to the sites historical industrial land use as a gas works (1850s) and a cotton and velvet mill (to the 1960s), with infilled gasometers and reservoirs	Medium (human health)	Moderate
4	Infilled gasometers and reservoirs may be a potential source of ground gases,			Low Likelihood (Southern area) Taking into account that this area of the site was occupied by terraced housing until the 1960s/1970s and then developed as a car sales garage		Moderate / Low

Table 7. Summary of Qualitative Risk Assessment

Linkage No.	Source	Pathway	Receptor	Probability	Severity	Risk Classification
4	Potential contamination associated with historical operation of the site as a gas works in the mid 19 th Century; a cotton and velvet mill up to the 1960s; and as a car sales, MOT and servicing Garage up to today.	Exposure to harmful vapours, hazardous ground gas and tainting of water supply	Neighbouring site users, principally within enclosed spaces	Low likelihood Taking into account that neighbouring properties are commercial premises, but vapours arising from infilled gasometers or reservoirs on the eastern boundary cannot be discounted at this time,	Medium (human health)	Moderate / Low
5	Contaminants of concern are likely to include TPHs, PAHs, VOCs, SVOCs and heavy metals. No asbestos register has been obtained; the pre-2000 development of the site makes asbestos presence in building fabrics possible. Periods of redevelopment may have resulted in asbestos fibres or fragments within shallow made ground soils.	Direct contact, inhalation of asbestos and ingestion	Current and proposed Commercial site end users, principally within landscaped area	Likely (Northern area) Due to the sites historical industrial land use as a gas works (1850s) and a cotton and velvet mill (to the 1960s), with infilled gasometers and reservoirs and periods of construction and demolition across this area up to 2001.	Medium (human health)	Moderate
6				Low Likelihood (Southern area) Taking into account that this area of the site was occupied by terraced housing until the 1960s/1970s and then developed as a car sales garage		Moderate / Low

Table 7. Summary of Qualitative Risk Assessment

7.0 Conclusions and Recommendations

7.1 Conclusions

A Phase I Preliminary Risk Assessment of a Site off Bell Lane, located in Bury, BL9 6AD was undertaken, prior to proposed redevelopment of the existing car dealership and garage, with a Petrol Filling Station (PFS), Drive Thru premises and retail unit.

The purpose of the assessment was to evaluate the potential for risk to be posed to human health and sensitive environmental receptors from historical and current use of the site.

During the site walkover undertaken on 27th September 2023, no visual or olfactory evidence of contamination were identified at the site.

A review of the historical mapping has identified that the northern area of the site was heavily industrialised prior to 1849, with a gas works and associated two gasometers, reservoir and chimney already established by that time. By the 1890s, the area had been redeveloped as a cotton mill and later a velvet mill (1910), with the gasometers mapped as reservoirs. The southern area of the site was occupied by terraced properties at this time and little change occurred across this area.

The entire site was redeveloped post-1960s as a car sales, MOT and servicing Garage, with new buildings constructed in the southern and northeastern areas and the remainder of the site used for car parking. No significant changes have been made to the site since 2001.

Consequently, the northern area of the site is considered to present a **Moderate / Low** risk to the underlying Secondary A Aquifer within the bedrock and a **Moderate** risk to site end users with respect to the inhalation of, ingestion of and dermal contact with contaminants within shallow soils on site, reflecting the historical industrial land use of this part of the site.

The southern area of the site is considered by Geo² to present a **Moderate / Low** risk to site end users with respect to the inhalation of, ingestion of and dermal contact with contaminants within shallow soils on site, reflecting that the area's historical use has been limited to terraced properties and a car sales garage.

7.2 Recommendations

The following measures are recommended to address the identified risks:

- In order to ensure that there is no evidence of significant risk to controlled waters and site end users from contamination on site, it is recommended that a site-wide ground investigation is undertaken to investigate shallow soils and groundwater for the potential presence of contamination.
- As new buildings are to be constructed on site and that an unknown thickness of made ground is anticipated across the site and the occurrence of potentially infilled reservoirs on the eastern boundary, it is recommended ground gas monitoring is undertaken following the ground investigation.

8.0 Limitations

Geo²s' conclusions, recommendations and opinions are based on information gathered at the time of the investigation from a variety of third party sources and from observations made during site reconnaissance. Therefore, there may be conditions at the site that have not been taken into account which were not apparent at the time of investigation.

A portion of this report is based solely upon information provided by third parties. The information has not been independently verified by Geo². Whilst this report and the opinions given in it are accurate to the best knowledge of Geo², Geo² cannot guarantee the completeness or accuracy of any descriptions, opinions or conclusions based solely upon information that has not been independently verified.

The recommendations contained within this report represent our professional opinions. These opinions were arrived at in accordance with currently accepted industry practices and hydrological and engineering practices at this time. As such they are not a guarantee that the site is free of hazardous materials or conditions.

1433 – Bell Lane, Bury – Photographic Survey 1

Image 1: Site entrance on the western boundary with Bridge St, facing northeast

Image 2: Southwest corner of the site onto Bridge St, brick paving with slope evident. The site is occupied by a Car Time dealership and service centre. Facing northeast

Image 3: Southeast corner of the site onto Bell Lane, gravel surfacing with the car sales building north of parked vehicles. Facing northwest

Image 4: Southeast corner of the site, gravel surfacing only in this area. Car sales building to the left (north). Outside water tap for car washing. Facing east.

Image 5: Southern end of the site, brick paving and the brick car sales building to the left. Site generally sloping west and north. Facing east.

Image 6: Southwestern area of the site, brick paving, rows of parked cars. The ground slopes steeply down to Bridge St on the western boundary and gently northwards through the site.

1433 – Bell Lane, Bury – Photographic Survey 2

Image 7: Southern area of the site, nearest Bridge St on the right (west) with the entrance front right. Sloping up to the southern boundary with Bell Lane. Facing south.

Image 8: Central southern area of the site, brick paving in front of the car sales building, with tarmac seen at the bottom of the photo. Facing south

Image 9: Inside the car sales building. Due to the site sloping, the southern-most end of the building is at a higher elevation. With steps down to the central part of the building. Facing southeast

Image 10: Northwestern area of the site, with the entrance/exit to Bridge St on the left (west). Tarmac surfacing and sloping gently down to the north and west. Facing north

Image 11: Central northern area of the site, tarmac surfacing. Generally, an area for parking for the MOT and servicing garages. Facing northeast

Image 12: Central northern area, tarmac surfacing. Brick sales building is L-shaped, becoming an MOT centre across the central eastern area of the site. Facing east

1433 – Bell Lane, Bury – Photographic Survey 3

Image 13: Located in the central northern area of the site, steel structures potentially remnants of historic industrial land use on site. Facing north

Image 14: While the tarmac is generally in good condition, some areas of patches and potholes are evident across the north-eastern area of the site. Facing west with the MOT garage to the left (south)

Image 15: MOT centre, entrance located in the north-eastern area of the site. Facing southwest.

Image 16: Inside the MOT centre, concrete floor. No evidence of serving pits. Facing south.

Image 17: Eastern boundary, north of the MOT centre. Tarmac surfacing, stone wall with wire on top. Some wooden pallets stored. Facing southeast.

Image 18: Northeastern area of the site, some areas of resurfaced tarmac and new potholes evident. Facing east.

1433 – Bell Lane, Bury – Photographic Survey 4

Image 19: Northern area of the site, tarmac surfacing. Stone wall on the northern boundary with Cobden St. Servicing garage in the northeast corner. Facing east.

Image 20: Inside of the servicing garage, concrete floor. No evidence of service pits. Tyres stacked in one area. Facing southeast.

Image 21: Southern corner of the Servicing Garage, tarmac surfacing and a manhole located outside of this building. Facing southeast.

Image 22: Northwestern corner of the site, tarmac surfacing and sloping down to the north and west. Manhole cover evident. Facing west.

Image 23: Double manhole chamber evident in the centre of the site near the entrance / exit to Bridge St. Tarmac surfacing, sloping down to the western boundary. Facing southwest.

Image 24: Drainage channels were evident in the southern area of the site, crossing the brick paving aligned east-west. Facing north.

1433 – Bell Lane, Bury – Photographic Survey 5

Image 25: Northern boundary with Cobden St is a stone wall with possible infilled windows evident. Facing southwest

Image 26: Industrial unit located directly east of the site, seen from Cobden St to the north. Facing southeast.

Image 27: H₂O Bathroom Studio commercial premises located directly east of the site, fronting onto Bell Lane. Facing east.

Image 28: South of Bell Lane, another Car Time dealership. Facing southwest.

Image 29: West of Bridge St, a third Car Time dealership site. Facing northwest.

Image 30: West of Bridge St, a Jewson building merchants is located northwest of the site.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Geology 1:50,000 Maps Coverage

Map ID:	1
Map Sheet No:	085
Map Name:	Manchester
Map Date:	2010
Bedrock Geology:	Available

LANDMARK INFORMATION GROUP®

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

LANDMARK INFORMATION GROUP®

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Lancashire And Furness

Published 1849

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1891

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan

Published 1985 - 1988

Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

LANDMARK INFORMATION GROUP®

Manchester

Published 1975

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan

Published 1980 - 1984

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2023

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Appendix D – Risk Assessment Terminology

Definitions and Classifications of Risk Assessment Terminology.

Probability

Probability can be defined as the chance of a particular event occurring in a given period of time.

Descriptions of each of the four qualitative terms to be used in this report to describe the perceived probability of any identified pollutant linkage becoming realised are shown below in Table W.

Term	Description
High Likelihood	There is pollutant linkage and an event would appear very likely in the short-term and almost inevitable over the long-term, or there is evidence at the receptor of harm or pollution.
Likely	There is pollutant linkage and all the elements are present and in the right place which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short-term and likely over the long-term.
Low Likelihood	There is pollutant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a long period such an event would take place, and is less likely in the shorter term.
Unlikely	There is pollutant linkage but circumstances are such that it is improbable that an event would occur even in the very long-term.

Table W. Description of Probability Classifications

Severity

Severity (consequence) can be defined as the adverse effects (or harm) arising from a defined hazard, which impairs the quality of human health or the environment in the short or longer term.

Descriptions of each of the four qualitative terms to be use in this report to describe the perceived potential severity of any identified pollutant linkage becoming realised are shown below in Table X.

Term	Description
Severe	Highly elevated concentrations likely to result in "significant harm" to human health as defined by the EPA 1990, Part 2A, if exposure occurs. Equivalent to EA Category 1 pollution incident including persistent and/or extensive effects on water quality; leading to closure of a potable abstraction point; major impact on amenity value or major damage to agriculture or commerce. Major damage to aquatic or other ecosystems, which is likely to result in a substantial adverse change in its functioning or harm to a species of special interest that endangers the long-term maintenance of the population. Catastrophic damage to crops, buildings or property.
Medium	Elevated concentrations which could result in "significant harm" to human health as defined by the EPA 1990, Part 2A if exposure occurs. Equivalent to EA Category 2 pollution incident including significant effect on water quality; notification required to abstractors; reduction in amenity value or significant damage to agriculture or commerce. Significant damage to aquatic or other ecosystems, which may result in a substantial adverse change in its functioning or harm to a species of special interest that may endanger the long-term maintenance of the population. Significant damage to crops, buildings or property.
Mild	Exposure to human health unlikely to lead to "significant harm". Equivalent to EA Category 3 pollution incident including minimal or short-lived effect on water quality; marginal effect on amenity value, agriculture or commerce. Minor or short-lived damage to aquatic or other ecosystems, which is unlikely to result in a substantial adverse change in its functioning or harm to a species of special interest that would endanger the long-term maintenance of the population. Minor damage to crops, buildings or property.
Minor	No measurable effect on humans. Equivalent to insubstantial pollution incident with no observed effect on water quality or ecosystems. Repairable effects of damage to buildings, structures and services.

Table X. Description of Severity Classifications

Once the severity and probability of a pollutant linkage has been determined the risk can be assessed using the risk matrix shown overleaf on Table Y.

Risk Matrix

By cross referencing the derived severity and probability in Table Y, below the perceived potential risk can be determined.

		Severity			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table Y. Risk Assessment Matrix

The risk categories detailed above are defined below in the following Table Z.

Term	Description
Very High Risk	There is a high probability that significant harm could arise to a designated receptor from an identified hazard at the site without appropriate remedial action.
High Risk	Significant harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remedial action.
Moderate Risk	It is possible that without appropriate remedial action, harm could arise to a designated receptor but it is relatively unlikely that any such harm would be severe and if any harm were to occur, it is likely that such harm would be relatively mild.
Low Risk	It is possible that significant harm could arise to a designated receptor from an identified hazard but it is likely that at worst this harm if realised would normally be mild.
Very Low Risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised, it is not likely to be severe.

Table Z. Definition of Risk
