

Chesham Hall

Proposed Gutter/Downpipe Detail

Remove existing defective UPVC guttering taking care to remove all corroded fixings from the stone work and fill holes with a lime mortar.

Material composition is cast aluminium in a powder coated matt black with matching brackets using Ogee style gutter with square downpipe. Matching brackets to be fitted to the masonry using brackets in mortar joints or connected to the timber fascia where applicable. Where fixings are required into the existing masonry, non expansion type fixings made of stainless steel will be used to avoid corrosion causing further damage to the stone. Fixings to be secured using a chemical anchor epoxy resin.
