We carried out the nesting bird surveys this morning on the buildings highlighted below.

We used binoculars, drones and thermal cameras during both the internal and external surveys.

No active nests or bird behaviour suggesting an active nest, were found.

We informed the site manager of the results and advised if during the demolition works an active nest was found, works should stop immediately and Project Ecology or another ecological consultancy/suitably qualified ecologist is to be contacted to attend site and assess.

Feel free to get back to me with any queries

Thanks,

  
Director and Ecologist
