CHURCH STREET WEST, RADCLIFFE, MANCHESTER, M26 2SY
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination and landfill gas issues.

SITE DESCRIPTION

The site is rectangular, 28 by 21m, to the southeast of Church Street in Radcliffe and at OS Grid Reference 378790, 407200. Inspected on 1/7/25 by Mr M Whitaker, there are the following features:

- Brick built building with slate roof at the northwest, with basement/lower ground floor most recently used by a furniture supplier/fitter/manufacturer.
- Ground floor at the northwest is level with Church Street West, with the lower ground floor accessed from the yard at the southeast.
- The main building is very untidy, almost derelict in places, with office furniture, materials and rubbish around the ground and first floors, and a room where many paint tins are stored.
- The basement has a concrete floor and contains many bags of unknown waste, machinery/equipment and numerous tins including paint and probable thinners.
- Broken concrete surfaced yard along the northwest of the building, overgrown in places.
- Single storey lean-to at the southeast, with possible asbestos cement sheet roof and concrete floor used to store various materials and equipment.
- Poor quality tarmac yard at the southeast.

The area slopes down to the southeast. There are houses to the northeast, southwest and northwest. To the southeast, in a small industrial unit joining the site, is the warehouse and showroom for a glass/mirror fitters with tarmac surfaced yard.

There are no notable trees or vegetation on site (not an accurate arboricultural survey).

PROPOSED DEVELOPMENT

It is proposed to convert the main building into a series of apartments. The lean to at the southeast will be demolished and a car park, bin store and cycle parking will be created at the southeast. The narrow strip at the northwest will remain as a hard-surfaced yard.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 26/6/2025
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 1/7/25.

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Pollution incidents
- Water abstraction points or source protection zones
- Landfill sites
- Hazardous substances sites or fuel stations
- Sensitive land uses

Geology of Site

The geological map indicates that the underlying solid rocks are unnamed strata, usually mudstone, of the Pennine Middle Coal Measures Formation, and surface drift is shown as Alluvium (clay, silt, sand and gravel) of unknown thickness.

Surface Water (Hydrology)

The nearest water course is the River Irwell, 90m south.

The nearest discharge consents are:

- 97m south – Storm sewage overflow to River Irwell*
- 103m south – Storm sewage overflow to River Irwell*

The area slopes down to the southeast, the flow of surface water is expected to be in this direction.

* not relevant due to distance/severity/significance

Flooding (General)

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding - Shown to have potential for groundwater flooding to occur at the surface.

Flooding from Rivers - Shown to be clear of flooding from rivers.

Surface Water Flooding - Shown to be at risk of 1 in 30 year (east corner) to 1 in 1000 year (southeast) surface water flooding.

Groundwater (Hydrogeology)

The solid rocks and superficial (drift deposits) under the site are indicated as Secondary A aquifers.

Groundwater flow is likely to follow the topography and move to the southeast.

Filled Ground

Within 250 metres of the site there are the following suspected filled features:

- 74m west
- 221m northeast

Radon

The site is in an intermediate probability radon area as between 1 and 3% of homes in the area are above the radon action level. Radon protection measures are not required.

Mining

The Coal Authority Interactive Mapping shows:

- Site is not in a High Risk Area.
- No nearby coal seams or mine entries.
- Site is not underlain by probable unrecorded shallow workings.

Nearby Industry

There is an LAPPC listing 108m north, Waste oil burners, less than 0.4MW net rated thermal input in 2006, Permitted.

There are the following trade/industry listings within 100m:

- 12m south – Glass products manufacturers, Active
- 38m northeast – Garage services, Inactive
- 71m north – Mechanical engineers, Active*
- 71m north – Materials handling equipment, Inactive (2 listings)*
- 77m northwest – Garage services, Inactive*
- 79m north – Garage services, Active*
- 95m west – Wrought ironwork, Inactive*
- 95m west – General engineers, Inactive*

* not relevant due to distance/severity/significance

DISCUSSION

Asbestos

The building, originally built in the 1800s, has likely undergone numerous repairs and renovations which may have introduced asbestos containing materials. An asbestos survey is beyond the scope of this report and it is recommended that such a survey is undertaken if it has not already been.

Contamination

The site was originally developed as a social club, not a use from which elevated levels of contaminants would be expected. However, made ground may have been introduced prior to construction which can have raised levels of contaminant. These would not be expected at high levels but can exceed stringent residential thresholds but not at levels likely to exceed thresholds appropriate for a hard-surfaced development where householders will not have contact with surface soils.

The building is currently unused but until recently was used by a furniture manufacturer/fitters. This does not suggest a significant source of widespread contaminants but there are stored cans around the site, including paint and thinners, and it is expected that adhesives will have been used. These are potential sources of contaminants which can create a risk from inhalation of vapours. Although the existing floors would be expected to impede the passage of contaminants to the underlying soils, the presence of volatile hydrocarbons cannot be ruled out at this stage and there is a potential risk, expected to be low, to householders in apartments in the lower ground floor.

Although the lean-to extension has a possible asbestos cement roof, and contains various equipment and materials, there is a concrete floor slab and external hard-surfacing. These will have acted to impede, if not prevent, contaminants from reaching the underlying soils and again it is only volatile hydrocarbons which are potentially a risk and cannot be ruled out at present.

There are no nearby industrial, or other, land uses which will affect the site. Although the nearest is just to the southeast, a window/mirror fitters/showroom will not generate contaminants which would be greater than those potentially generated on site and, contaminants from previous industries to the southeast will migrate down to the southeast and not up to the site.

The proposal is to demolish the lean-to extension and convert the existing building to apartments. There will be a car park to the southeast and narrow hard-surfaced yard (as present) to the northwest. There will be no landscaping and, therefore, no contact with surface soils by householders. Potential pollutant linkages are considered to be:

- Sulphate attack on buried concrete.
- Inhalation of vapours.
- Contaminants entering drinking water pipes.

A very low risk is anticipated.

Controlled Waters

There is an underlying Secondary A aquifer beneath alluvium. There are no nearby water abstraction points or source protection zones.

The River Irwell is 90m south.

Although contaminants may be present at raised levels, on completion, the building will almost fill the site and this, together with the car park and hard-surface yard, will eliminate the risk of rainwater passing through the surface soils and leaching out contaminants. Furthermore, the site has been mostly covered for a long time which would have helped prevent contaminants (if any) migrating down towards perched water. It is anticipated there will be no risk to controlled waters.

Landfill Gas/Ground Gas

Although there are no landfill sites within 250m there are numerous areas of unregulated filled ground in the surrounding area where ground gases may be generated, including areas less than 100m away. The underlying alluvium may not impede the passage of gases and, therefore, there is potential for gases to be generated in these filled areas which could migrate to and pose a risk to the development.

Bearing in mind the distance and age of filling it is expected that there is likely to be a low to medium gas generation potential and very low to low gas risk to the site.

Radon

Radon protection measures are not required.

Flooding

The Environment Agency maps show that this site is clear of flooding from rivers but may be at risk of 1 in 30 year (east corner) to 1 in 1000 year (southeast) surface water flooding and is in an area with potential for groundwater flooding to occur at the surface.

Bearing in mind the development includes a basement/lower ground floor this may cause difficulties during periods of heavy rain from surface water flooding or rising groundwater levels.

INDUSTRY PROFILE

The site was originally developed as a social club but later uses include the recent furniture supplier/manufacturer/fitter. There are numerous tins inside the building, including paint, thinners and probable adhesive, and made ground may have been introduced prior to construction.

Industry	Possible Contaminants
Furniture manufacture	Metals: cadmium, copper, lead, zinc Inorganic compounds : cyanide, sulphate Organic solvents (VOC) Fuel oil, diesel, petrol (TPHs) Asbestos
Made ground	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Phenols Mineral oils, fuel oils (TPHs) Asbestos General hydrocarbons (PAHs)

CONCEPTUAL MODEL

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	No pathway	No
	Off-site	Migration off-site	No
Inorganic contaminants	Householders	No pathway	No
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbons	Householders	No pathway	No
	Service pipes	Seeping into water pipes (if new pipes required)	Possible
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	Possible
Landfill gas	End-users (inside)	Seeping into buildings, explosion, asphyxiation	Possible
Radon	End-users (inside)	Seeping into buildings	No

CONCLUSION

Asbestos

It is recommended that an asbestos survey of the existing building is carried out.

Contamination

Taking into account the site history it is thought likely that contaminants will be present at raised levels. However, these are unlikely to present a significant risk to a hard-surfaced development although volatile hydrocarbons below the footprint of the building cannot be ruled out at present.

An intrusive investigation is required, consisting of boreholes/trial holes and tests to confirm the presence/absence and extent of contamination. There are no specific point sources for contamination and the investigation will need to target the building footprint, car park and route of new waste pipes.

Controlled Waters

No risk to controlled water is expected and no further action is considered necessary at this stage. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

There are nearby areas of filled ground from which a very low to low gas risk to the site is considered possible. A gas testing programme is required.

Radon

Radon protection measures are not required.

Flooding

The EA maps show the site clear of flooding from rivers but at risk of 1 in 30 to 1 in 1000 year surface water flooding. These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. Bearing in mind there is a basement/lower ground floor it is suggested that consideration is given to obtaining a detailed flood risk assessment.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Lancashire And Furness

Published 1848 - 1851

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1965

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
